Preface	xi
1 Introduction	1
1.1 The Vision Thing	4
1.2 Some Views of the Field	7
1.3 Objections to Multiagent Systems	8
2 Intelligent Agents	15
2.1 Environments	17
2.2 Intelligent Agents	23
2.3 Agents and Objects	25
2.4 Agents and Expert Systems	27
2.5 Agents as Intentional Systems	28
2.6 Abstract Architectures for Intelligent Agents	31
2.7 How to Tell an Agent What to Do	36
2.8 Synthesizing Agents	42
3 Deductive Reasoning Agents	47
3.1 Agents as Theorem Provers	49
3.2 Agent-Oriented Programming	54
3.3 Concurrent MetateM	56
4 Practical Reasoning Agents	65
4.1 Practical Reasoning Equals Deliberation Plus Means-Ends Reasoning	65
4.2 Means-Ends Reasoning	70
4.3 Implementing a Practical Reasoning Agent	75
4.4 HOMER: an Agent That Plans	80
4.5 The Procedural Reasoning System	82
5 Reactive and Hybrid Agents	89
5.1 Brooks and the Subsumption Architecture	90
5.2 The Limitations of Reactive Agents	96
5.3 Hybrid Agents	97
5.3.1 TouringMachines	99
5.3.2 InteRRaP	101
6 Multiagent Interactions	105
6.1 Utilities and Preferences	106

6.2	Multiagent Encounters	108
6.3	Dominant Strategies and Nash Equilibria	111
6.4	Competitive and Zero-Sum Interactions	113
6.5	The Prisoner's Dilemma	114
6.6	Other Symmetric 2×2 Interactions	122
6.7	Dependence Relations in Multiagent Systems	125
7	Reaching Agreements	129
7.1	Mechanism Design	130
7.2	Auctions	131
7.3	Negotiation	137
7.3.1	Task-oriented domains	139
7.3.2	Worth-oriented domains	146
7.4	Argumentation	148
8	Communication	163
8.1	Speech Acts	164
8.1.1	Austin	164
8.1.2	Searle	165
8.1.3	The plan-based theory of speech acts	166
8.1.4	Speech acts as rational action	167
8.2	Agent Communication Languages	168
8.2.1	KIF	169
8.2.2	KQML	170
8.2.3	The FIPA agent communication languages	175
8.3	Ontologies for Agent Communication	180
8.4	Coordination Languages	183
9	Working Together	189
9.1	Cooperative Distributed Problem Solving	190
9.2	Task Sharing and Result Sharing	192
9.2.1	Task sharing in the Contract Net	194
9.3	Result Sharing	197
9.4	Combining Task and Result Sharing	197
9.5	Handling Inconsistency	199
9.6	Coordination	200
9.6.1	Coordination through partial global planning	202
9.6.2	Coordination through joint intentions	204
9.6.3	Coordination by mutual modelling	210
9.6.4	Coordination by norms and social laws	213
9.7	Multiagent Planning and Synchronization	218
10	Methodologies	225
10.1	When is an Agent-Based Solution Appropriate?	225
10.2	Agent-Oriented Analysis and Design Techniques	226
10.3	Pitfalls of Agent Development	233
10.4	Mobile Agents	236
11	Applications	245
11.1	Agents for Workflow and Business Process Management	245
11.2	Agents for Distributed Sensing	248
11.3	Agents for Information Retrieval and Management	248
11.4	Agents for Electronic Commerce	254

11.5	Agents for Human-Computer Interfaces	258
11.6	Agents for Virtual Environments	259
11.7	Agents for Social Simulation	259
11.8	Agents for X	263
12	Logics for Multiagent Systems	267
12.1	Why Modal Logic?	268
12.2	Possible-Worlds Semantics for Modal Logics	270
12.3	Normal Modal Logics	271
12.4	Epistemic Logic for Multiagent Systems	278
12.5	Pro-attitudes: goals and desires	280
12.6	Common and distributed knowledge	281
12.7	Integrated Theories of Agency	283
12.8	Formal Methods in Agent-Oriented Software Engineering	288
12.8.1	Formal methods in specification	288
12.8.2	Formal methods in implementation	290
12.8.3	Verification	294
	Appendix A. A History Lesson	303
	Afterword	317
	References	319
	Index	343
