Introduction	xi
List of Results	xix
Basic Notation	xxv
1 Basic Concepts	1
1.1 Formal Settings	1
1.2 Multifunctions and Derivatives	2
1.3 Particular Locally Lipschitz Functions and Related Definitions	4
<i>Generalized Jacobians of Locally Lipschitz Functions</i>	4
<i>Pseudo-Smoothness and $D^\circ f$</i>	4
<i>Piecewise C^1 Functions</i>	5
<i>NCP Functions</i>	5
1.4 Definitions of Regularity	6
<i>Definitions of Lipschitz Properties</i>	6
<i>Regularity Definitions</i>	7
<i>Functions and Multifunctions</i>	9
1.5 Related Definitions	10
<i>Types of Semicontinuity</i>	10
<i>Metric, Pseudo-, Upper Regularity; Openness with Linear Rate</i>	12
<i>Calmness and Upper Regularity at a Set</i>	13
1.6 First Motivations	14
<i>Parametric Global Minimizers</i>	15
<i>Parametric Local Minimizers</i>	16
<i>Epi-Convergence</i>	17
2 Regularity and Consequences	19
2.1 Upper Regularity at Points and Sets	19
<i>Characterization by Increasing Functions</i>	19
<i>Optimality Conditions</i>	25
<i>Linear Inequality Systems with Variable Matrix</i>	28
<i>Application to Lagrange Multipliers</i>	30
<i>Upper Regularity and Newton's Method</i>	31

2.2	Pseudo-Regularity	32
2.2.1	The Family of Inverse Functions	34
2.2.2	Ekeland Points and Uniform Lower Semicontinuity	37
2.2.3	Special Multifunctions	43
	<i>Level Sets of L.s.c. Functions</i>	43
	<i>Cone Constraints</i>	44
	<i>Lipschitz Operators with Images in Hilbert Spaces</i>	46
	<i>Necessary Optimality Conditions</i>	47
2.2.4	Intersection Maps and Extension of MFCQ	49
	<i>Intersection with a Quasi-Lipschitz Multifunction</i>	49
	<i>Special Cases</i>	54
	<i>Intersections with Hyperfaces</i>	58
3	Characterizations of Regularity by Derivatives	61
3.1	Strong Regularity and Thibault's Limit Sets	61
3.2	Upper Regularity and Contingent Derivatives	63
3.3	Pseudo-Regularity and Generalized Derivatives	63
	<i>Contingent Derivatives</i>	64
	<i>Proper Mappings</i>	64
	<i>Closed Mappings</i>	64
	<i>Coderivatives</i>	66
	<i>Vertical Normals</i>	67
4	Nonlinear Variations and Implicit Functions	71
4.1	Successive Approximation and Persistence of Pseudo-Regularity	72
4.2	Persistence of Upper Regularity	77
	<i>Persistence Based on Kakutani's Fixed Point Theorem</i>	77
	<i>Persistence Based on Growth Conditions</i>	79
4.3	Implicit Functions	82
5	Closed Mappings in Finite Dimension	89
5.1	Closed Multifunctions in Finite Dimension	89
	5.1.1 Summary of Regularity Conditions via Derivatives	89
	5.1.2 Regularity of the Convex Subdifferential	92
5.2	Continuous and Locally Lipschitz Functions	93
	5.2.1 Pseudo-Regularity and Exact Penalization	94
	5.2.2 Special Statements for $m = n$	96
	5.2.3 Continuous Selections of Pseudo-Lipschitz Maps	99
5.3	Implicit Lipschitz Functions on \mathbb{R}^n	100
6	Analysis of Generalized Derivatives	105
6.1	General Properties for Abstract and Polyhedral Mappings	105
6.2	Derivatives for Lipschitz Functions in Finite Dimension	110
6.3	Relations between Tf and ∂f	113
6.4	Chain Rules of Equation Type	115
	6.4.1 Chain Rules for Tf and Cf with $f \in C^{0,1}$	115

6.4.2	Newton Maps and Semismoothness	121
6.5	Mean Value Theorems, Taylor Expansion and Quadratic Growth	131
6.6	Contingent Derivatives of Implicit (Multi-) Functions and Stationary Points	136
6.6.1	Contingent Derivative of an Implicit (Multi-)Function . .	137
6.6.2	Contingent Derivative of a General Stationary Point Map	141
7	Critical Points and Generalized Kojima-Functions	149
7.1	Motivation and Definition	149
	<i>KKT Points and Critical Points in Kojima's Sense</i>	150
	<i>Generalized Kojima-Functions - Definition</i>	151
7.2	Examples and Canonical Parametrizations	154
	<i>The Subdifferential of a Convex Maximum Function</i>	154
	<i>Complementarity Problems</i>	156
	<i>Generalized Equations</i>	157
	<i>Nash Equilibria</i>	159
	<i>Piecewise Affine Bijections</i>	160
7.3	Derivatives and Regularity of Generalized Kojima-Functions . .	160
	<i>Properties of N</i>	160
	<i>Formulas for Generalized Derivatives</i>	164
	<i>Regularity Characterizations by Stability Systems</i>	167
	<i>Geometrical Interpretation</i>	168
7.4	Discussion of Particular Cases	170
7.4.1	The Case of Smooth Data	170
7.4.2	Strong Regularity of Complementarity Problems	175
7.4.3	Reversed Inequalities	177
7.5	Pseudo-Regularity versus Strong Regularity	178
8	Parametric Optimization Problems	183
8.1	The Basic Model	185
8.2	Critical Points under Perturbations	187
8.2.1	Strong Regularity	187
	<i>Geometrical Interpretation</i>	189
	<i>Direct Perturbations for the Quadratic Approximation</i> . .	190
	<i>Strong Regularity of Local Minimizers under LICQ</i> . . .	191
8.2.2	Local Upper Lipschitz Continuity	193
	<i>Reformulation of the C-Stability System</i>	194
	<i>Geometrical Interpretation</i>	196
	<i>Direct Perturbations for the Quadratic Approximation</i> . .	197
8.3	Stationary and Optimal Solutions under Perturbations	198
8.3.1	Contingent Derivative of the Stationary Point Map	199
	<i>The Case of Locally Lipschitzian F</i>	200
	<i>The Smooth Case</i>	202
8.3.2	Local Upper Lipschitz Continuity	203
	<i>Injectivity and Second-Order Conditions</i>	205

	<i>Conditions via Quadratic Approximation</i>	208
	<i>Linearly Constrained Programs</i>	209
8.3.3	Upper Regularity	210
	<i>Upper Regularity of Isolated Minimizers</i>	211
	<i>Second-Order Optimality Conditions for $C^{1,1}$ Programs</i>	215
8.3.4	Strongly Regular and Pseudo-Lipschitz Stationary Points	217
	<i>Strong Regularity</i>	217
	<i>Pseudo-Lipschitz Property</i>	220
8.4	Taylor Expansion of Critical Values	221
8.4.1	Marginal Map under Canonical Perturbations	222
8.4.2	Marginal Map under Nonlinear Perturbations	225
	<i>Formulas under Upper Regularity of Stationary Points</i>	225
	<i>Formulas under Strong Regularity</i>	227
	<i>Formulas in Terms of the Critical Value Function Given under Canonical Perturbations</i>	229
9	Derivatives and Regularity of Further Nonsmooth Maps	231
9.1	Generalized Derivatives for Positively Homogeneous Functions	231
9.2	NCP Functions	236
	<i>Case (i): Descent Methods</i>	237
	<i>Case (ii): Newton Methods</i>	238
9.3	The C -Derivative of the Max-Function Subdifferential	241
	<i>Contingent Limits</i>	243
	<i>Characterization of $C \partial_c f$ for Max-Functions: Special Structure</i>	244
	<i>Characterization of $C \partial_c f$ for Max-Functions: General Structure</i>	251
	<i>Application 1</i>	253
	<i>Application 2</i>	254
10	Newton's Method for Lipschitz Equations	257
10.1	Linear Auxiliary Problems	257
	10.1.1 Dense Subsets and Approximations of M	260
	10.1.2 Particular Settings	261
	10.1.3 Realizations for $\text{loc}PC^1$ and NCP Functions	262
10.2	The Usual Newton Method for PC^1 Functions	265
10.3	Nonlinear Auxiliary Problems	265
	10.3.1 Convergence	267
	10.3.2 Necessity of the Conditions	270
11	Particular Newton Realizations and Solution Methods	275
11.1	Perturbed Kojima Systems	276
	<i>Quadratic Penalties</i>	276
	<i>Logarithmic Barriers</i>	276
11.2	Particular Newton Realizations and SQP-Models	278

12 Basic Examples and Exercises	287
12.1 Basic Examples	287
12.2 Exercises	296
Appendix	303
<i>Ekeland's Variational Principle</i>	303
<i>Approximation by Directional Derivatives</i>	304
<i>Proof of $TF = T(NM) = NTM + TNM$</i>	306
<i>Constraint Qualifications</i>	307
Bibliography	311
Index	325
