1	Introduction	1
1.1	Introduction to Distributed Systems	2
1.2	Some Terminology	3
1.3	Centralized and Decentralized Systems	5
1.3.1	Resource Discovery	6
1.3.2	Resource Availability	7
1.3.3	Resource Communication	9
1.4	Examples of Distributed Applications	10
1.4.1	A Web Server: Centralized	10
1.4.2	SETI@Home: Centralized	12
1.4.3	Napster: Brokered	13
1.4.4	Gnutella: Decentralized	13
1.5	Examples of Middleware	15
1.5.1	J2EE and JMS: Centralized	15
1.5.2	Jini: Brokered	16
1.5.3	Web Services: Brokered	17
1.5.4	Jxta: Decentralized	17
1.6	Conclusion	18

Part I Distributed Environments

2	Peer-2-Peer Systems	23
2.1	What is Peer to Peer?	23
2.1.1	Historical Peer to Peer	24
2.1.2	Binding of Peers	24
2.1.3	Modern Definition of Peer to Peer	25
2.1.4	Social Impacts of P2P	27
2.1.5	True Peer to Peer?	29
2.1.6	Why Peer-to-Peer?	30
2.2	The P2P Environment	31

2.2.1	Hubs, Switches, Bridges, Access Points and Routers . . .	31
2.2.2	NAT Systems	32
2.2.3	Firewalls	34
2.2.4	P2P Overlay Networks	35
2.3	P2P Example Applications	37
2.3.1	MP3 File Sharing with Napster	37
2.3.2	Distributed Computing Using SETI@Home	38
2.3.3	Instant Messaging with ICQ	39
2.3.4	File Sharing with Gnutella	40
2.3.5	Conclusion	41
3	Web Services	43
3.1	Introduction	43
3.1.1	Looking Forward: What Do We Need?	44
3.1.2	Representing Data and Semantics	47
3.2	Web Services	48
3.2.1	A Minimal Web Service	49
3.2.2	Web Services Architecture	50
3.2.3	Web Services Development	52
3.3	Service-Oriented Architecture	53
3.3.1	A Web Service SOA	53
3.4	Common Web Service Misconceptions	55
3.4.1	Web Services and Distributed Objects	55
3.4.2	Web Services and Web Servers	55
3.5	Conclusion	56
4	Grid Computing	57
4.1	The Grid Dream	57
4.2	Social Perspective	58
4.3	History of the Grid	59
4.3.1	The First Generation	60
4.3.2	The Second Generation	61
4.3.3	The Third Generation	62
4.4	The Grid Computing Architecture	63
4.4.1	Virtual Organizations and the Sharing of Resources	64
4.5	To Be or Not to Be a Grid: These Are the Criteria	67
4.5.1	Centralized Control	67
4.5.2	Standard, Open, General-Purpose Protocols	68
4.5.3	Quality Of Service	69
4.6	Types of Grid	69
4.7	The Globus Toolkit 2.x	70
4.7.1	Globus Tools	71
4.7.2	Security	72
4.7.3	Information Services	73
4.7.4	Data Management	74

4.7.5	Resource Management	76
4.8	Comments and Conclusion	77

Part II Middleware, Applications and Supporting Technologies

5	Jini	83
5.1	Jini	84
5.1.1	Setting the Scene	84
5.2	Jini's Transport Backbone: RMI and Serialization	84
5.2.1	RMI	85
5.2.2	Serialization	86
5.3	Jini Architecture	89
5.3.1	Jini in Operation	91
5.4	Registering and Using Jini Services	93
5.4.1	Discovery: Finding Lookup Services	93
5.4.2	Join: Registering a Service (Jini Service)	94
5.4.3	Lookup: Finding and Using Services (Jini Client)	96
5.5	Jini: Tying Things Together	97
5.6	Organization of Jini Services	99
5.6.1	Events	99
5.7	Conclusion	100
6	Gnutella	101
6.1	History of Gnutella	101
6.2	What Is Gnutella?	102
6.3	A Gnutella Scenario: Connecting and Operating Within a Gnutella Network	105
6.3.1	Discovering Peers	105
6.3.2	Gnutella in Operation	105
6.3.3	Searching Within Gnutella	106
6.4	Gnutella 0.4 Protocol Description	107
6.4.1	Gnutella Descriptors	108
6.4.2	Gnutella Descriptor Header	109
6.4.3	Gnutella Payload: Ping	110
6.4.4	Gnutella Payload: Pong	110
6.4.5	Gnutella Payload: Query	111
6.4.6	Gnutella Payload: QueryHit	111
6.4.7	Gnutella Payload: Push	112
6.5	File Downloads	113
6.6	Gnutella Implementations	115
6.7	More Information	115
6.8	Conclusion	115

7 Scalability	117
7.1 Social Networks	117
7.2 P2P Networks	119
7.2.1 Performance in P2P Networks	119
7.3 Peer Topologies	121
7.3.1 Centralized	122
7.3.2 Ring	122
7.3.3 Hierarchical	122
7.3.4 Decentralized	124
7.4 Hybrid Topologies	124
7.4.1 Centralized/Ring	124
7.4.2 Centralized/Centralized	125
7.4.3 Centralized/Decentralized	125
7.5 The Convergence of Napster and Gnutella	127
7.6 A Southern Side-Step	128
7.7 Gnutella Analysis	129
7.7.1 Gnutella Free Riding	129
7.7.2 Equal Peers?	130
7.7.3 Power-Law Networks	130
7.8 Further Reading	131
7.9 Conclusion	131
8 Security	133
8.1 Introduction	133
8.2 Design Issues	135
8.2.1 Focus of Data Control	135
8.2.2 Layering of Security Mechanisms	136
8.2.3 Simplicity	138
8.3 Cryptography	138
8.3.1 Basics of Cryptography	138
8.3.2 Types of Encryption	140
8.3.3 Symmetric Cryptosystem	140
8.3.4 Asymmetric Cryptosystem	141
8.3.5 Hash Functions	142
8.4 Signing Messages with a Digital Signature	143
8.5 Secure Channels	144
8.5.1 Secure Channels Using Symmetric Keys	145
8.5.2 Secure Channels Using Public/Private Keys	145
8.6 Secure Mobile Code: Creating a Sandbox	147
8.7 Conclusion	148

9	Freenet	151
9.1	Introduction	151
9.2	Freenet Routing	152
9.2.1	Populating the Freenet Network	152
9.2.2	Self-Organizing Adaptive Behaviour in Freenet	153
9.2.3	Requesting Files	154
9.2.4	Similarities with Other Peer Organization Techniques ..	155
9.3	Freenet Keys	156
9.3.1	Keyword-Signed Keys	157
9.3.2	Signed Subspace Keys	158
9.3.3	Content Hash Keys	159
9.3.4	Clustering Keys	160
9.4	Joining the Network	161
9.5	Conclusion	162
10	Jxta	163
10.1	Background: Why Was Project Jxta Started?	163
10.1.1	Interoperability	164
10.1.2	Platform independence	164
10.1.3	Ubiquity	165
10.2	Jxta Overview	166
10.2.1	The Jxta Architecture	166
10.2.2	Jxta Peers	167
10.2.3	Identifiers	168
10.2.4	Advertisements	169
10.2.5	Messages	169
10.2.6	Modules	170
10.3	Jxta Network Overlay	170
10.3.1	Peer Groups	170
10.3.2	Rendezvous Nodes	171
10.3.3	Pipes	172
10.3.4	Relay Nodes	174
10.4	The Jxta Protocols	174
10.4.1	The Peer Discovery Protocol	174
10.4.2	The Peer Resolver Protocol	175
10.4.3	The Peer Information Protocol	176
10.4.4	The Pipe Binding Protocol	176
10.4.5	The Endpoint Routing Protocol	176
10.4.6	The Rendezvous Protocol	176
10.5	A Jxta Scenario: Fitting Things Together	176
10.6	Jxta Environment Considerations	177
10.6.1	Security	177
10.6.2	NAT and Firewalls	178
10.7	Comment	178
10.8	Conclusion	178

Part III Middleware Deployment

11 Distributed Object Deployment Using Jini	185
11.1 RMI Security	185
11.2 An RMI Application	186
11.2.1 The Java Proxy	186
11.2.2 The Server	187
11.2.3 The Client	189
11.2.4 Setting up the Environment	190
11.3 A Jini Application	191
11.3.1 The Remote Interface	192
11.3.2 The Server	192
11.3.3 The Client	194
11.4 Running Jini Applications	196
11.4.1 HTTP Server	196
11.4.2 RMID Daemon	196
11.4.3 The Jini Lookup Service	197
11.4.4 Running the Service	197
11.5 Conclusion	198
12 P2P Deployment Using Jxta	199
12.1 Jxta Programming: Three Examples Illustrated	199
12.1.1 Starting the Jxta Platform	200
12.1.2 Discovery	201
12.1.3 Creating Pipes	204
12.2 Running Jxta Applications	208
12.3 P2P Environment: The Jxta Approach	209
12.3.1 Peer Configuration Using Jxta	209
12.3.2 Peer Configuration Management Within Jxta	211
12.3.3 Running The Examples	214
12.3.4 Jxta and P2P Advert Availability	214
12.3.5 Expiration of Adverts	215
12.4 Conclusion	216
13 Web Services Deployment	217
13.1 SOAP	217
13.1.1 Just Like Sending a Letter	218
13.1.2 Web Services Architecture with SOAP	219
13.1.3 The Anatomy of a SOAP Message	221
13.2 WSDL	222
13.2.1 Service Description	223
13.2.2 Implementation Details	224
13.2.3 Anatomy of a WSDL Document	225
13.3 UDDI	228

13.4 Using Web Services	229
13.4.1 Axis Installation	229
13.4.2 A Simple Web Service	231
13.4.3 Deploying a Web Service Using Axis	232
13.4.4 Web Service Invocation	233
13.4.5 Cleaning Up and Un-Deploying	235
13.5 Conclusion	235

Part IV From Web Services to Future Grids

14 OGSA	241
14.1 OGSA	242
14.1.1 Grid Services	242
14.1.2 Virtual Services	244
14.1.3 OGSA Architecture	245
14.2 OGSI	246
14.2.1 Globus Toolkit, Version 3	249
14.3 WSRF	249
14.3.1 Problems with OGSI	250
14.3.2 Grid Services or Resources?	251
14.3.3 OGSI Functionality in WSRF	251
14.3.4 Globus Toolkit, Version 4	252
14.4 Conclusion	252
A Want to Find Out More?	253
A.1 Grid Computing	253
A.2 P2P Computing	254
A.3 Distributed Object Computing	255
A.4 Web Services	256
B RSA Algorithm	259
References	261
Index	269
