|---|----------|
| Preface | VII |
| Notation | XVII |
| 1 Stochastic Processes and Stochastic Differential Equations | 1 |
| 1.1 Elements of probability and random variables | 1 |
| 1.1.1 Mean, variance, and moments | 2 |
| 1.1.2 Change of measure and Radon-Nikodým derivative.. | 4 |
| 1.2 Random number generation | 5 |
| 1.3 The Monte Carlo method | 5 |
| 1.4 Variance reduction techniques | 8 |
| 1.4.1 Preferential sampling | 9 |
| 1.4.2 Control variables | 12 |
| 1.4.3 Antithetic sampling | 13 |
| 1.5 Generalities of stochastic processes | 14 |
| 1.5.1 Filtrations | 14 |
| 1.5.2 Simple and quadratic variation of a process | 15 |
| 1.5.3 Moments, covariance, and increments of stochastic processes | 16 |
| 1.5.4 Conditional expectation | 16 |
| 1.5.5 Martingales | 18 |
| 1.6 Brownian motion | 18 |
| 1.6.1 Brownian motion as the limit of a random walk.... | 20 |
| 1.6.2 Brownian motion as $L^2[0, T]$ expansion | 22 |
| 1.6.3 Brownian motion paths are nowhere differentiable .. | 24 |
| 1.7 Geometric Brownian motion..... | 24 |
| 1.8 Brownian bridge | 27 |
| 1.9 Stochastic integrals and stochastic differential equations | 29 |
| 1.9.1 Properties of the stochastic integral and Itô processes | 32 |

XII Contents

| | | |
|---------|--|----|
| 1.10 | Diffusion processes | 33 |
| 1.10.1 | Ergodicity | 35 |
| 1.10.2 | Markovianity | 36 |
| 1.10.3 | Quadratic variation | 37 |
| 1.10.4 | Infinitesimal generator of a diffusion process | 37 |
| 1.10.5 | How to obtain a martingale from a diffusion process | 37 |
| 1.11 | Itô formula | 38 |
| 1.11.1 | Orders of differentials in the Itô formula | 38 |
| 1.11.2 | Linear stochastic differential equations | 39 |
| 1.11.3 | Derivation of the SDE for the geometric Brownian motion | 39 |
| 1.11.4 | The Lamperti transform | 40 |
| 1.12 | Girsanov's theorem and likelihood ratio for diffusion processes | 41 |
| 1.13 | Some parametric families of stochastic processes | 43 |
| 1.13.1 | Ornstein-Uhlenbeck or Vasicek process | 43 |
| 1.13.2 | The Black-Scholes-Merton or geometric Brownian motion model | 46 |
| 1.13.3 | The Cox-Ingersoll-Ross model | 47 |
| 1.13.4 | The CKLS family of models | 49 |
| 1.13.5 | The modified CIR and hyperbolic processes | 49 |
| 1.13.6 | The hyperbolic processes | 50 |
| 1.13.7 | The nonlinear mean reversion Aït-Sahalia model | 50 |
| 1.13.8 | Double-well potential | 51 |
| 1.13.9 | The Jacobi diffusion process | 51 |
| 1.13.10 | Ahn and Gao model or inverse of Feller's square root model | 52 |
| 1.13.11 | Radial Ornstein-Uhlenbeck process | 52 |
| 1.13.12 | Pearson diffusions | 52 |
| 1.13.13 | Another classification of linear stochastic systems | 54 |
| 1.13.14 | One epidemic model | 56 |
| 1.13.15 | The stochastic cusp catastrophe model | 57 |
| 1.13.16 | Exponential families of diffusions | 58 |
| 1.13.17 | Generalized inverse gaussian diffusions | 59 |
| 2 | Numerical Methods for SDE | 61 |
| 2.1 | Euler approximation | 62 |
| 2.1.1 | A note on code vectorization | 63 |
| 2.2 | Milstein scheme | 65 |
| 2.3 | Relationship between Milstein and Euler schemes | 66 |
| 2.3.1 | Transform of the geometric Brownian motion | 68 |
| 2.3.2 | Transform of the Cox-Ingersoll-Ross process | 68 |
| 2.4 | Implementation of Euler and Milstein schemes: the <code>sde.sim</code> function | 69 |
| 2.4.1 | Example of use | 70 |

| | | |
|----------|--|------------|
| 2.5 | The constant elasticity of variance process and strange paths | 72 |
| 2.6 | Predictor-corrector method | 72 |
| 2.7 | Strong convergence for Euler and Milstein schemes | 74 |
| 2.8 | KPS method of strong order $\gamma = 1.5$ | 77 |
| 2.9 | Second Milstein scheme | 81 |
| 2.10 | Drawing from the transition density | 82 |
| 2.10.1 | The Ornstein-Uhlenbeck or Vasicek process | 83 |
| 2.10.2 | The Black and Scholes process | 83 |
| 2.10.3 | The CIR process | 83 |
| 2.10.4 | Drawing from one model of the previous classes | 84 |
| 2.11 | Local linearization method | 85 |
| 2.11.1 | The Ozaki method | 85 |
| 2.11.2 | The Shoji-Ozaki method | 87 |
| 2.12 | Exact sampling | 91 |
| 2.13 | Simulation of diffusion bridges | 98 |
| 2.13.1 | The algorithm | 99 |
| 2.14 | Numerical considerations about the Euler scheme | 101 |
| 2.15 | Variance reduction techniques | 102 |
| 2.15.1 | Control variables | 103 |
| 2.16 | Summary of the function sde.sim | 105 |
| 2.17 | Tips and tricks on simulation | 106 |
| 3 | Parametric Estimation | 109 |
| 3.1 | Exact likelihood inference | 112 |
| 3.1.1 | The Ornstein-Uhlenbeck or Vasicek model | 113 |
| 3.1.2 | The Black and Scholes or geometric Brownian motion model | 117 |
| 3.1.3 | The Cox-Ingersoll-Ross model | 119 |
| 3.2 | Pseudo-likelihood methods | 122 |
| 3.2.1 | Euler method | 122 |
| 3.2.2 | Elerian method | 125 |
| 3.2.3 | Local linearization methods | 127 |
| 3.2.4 | Comparison of pseudo-likelihoods | 128 |
| 3.3 | Approximated likelihood methods | 131 |
| 3.3.1 | Kessler method | 131 |
| 3.3.2 | Simulated likelihood method | 134 |
| 3.3.3 | Hermite polynomials expansion of the likelihood | 138 |
| 3.4 | Bayesian estimation | 155 |
| 3.5 | Estimating functions | 157 |
| 3.5.1 | Simple estimating functions | 157 |
| 3.5.2 | Algorithm 1 for simple estimating functions | 164 |
| 3.5.3 | Algorithm 2 for simple estimating functions | 167 |
| 3.5.4 | Martingale estimating functions | 172 |
| 3.5.5 | Polynomial martingale estimating functions | 173 |

| | | |
|--|---|------------|
| 3.5.6 | Estimating functions based on eigenfunctions | 178 |
| 3.5.7 | Estimating functions based on transform functions . . | 179 |
| 3.6 | Discretization of continuous-time estimators | 179 |
| 3.7 | Generalized method of moments | 182 |
| 3.7.1 | The GMM algorithm | 184 |
| 3.7.2 | GMM, stochastic differential equations, and Euler method | 185 |
| 3.8 | What about multidimensional diffusion processes? . . . | 190 |
| 4 | Miscellaneous Topics | 191 |
| 4.1 | Model identification via Akaike's information criterion | 191 |
| 4.2 | Nonparametric estimation | 197 |
| 4.2.1 | Stationary density estimation | 198 |
| 4.2.2 | Local-time and stationary density estimators | 201 |
| 4.2.3 | Estimation of diffusion and drift coefficients | 202 |
| 4.3 | Change-point estimation | 208 |
| 4.3.1 | Estimation of the change point with unknown drift . . | 212 |
| 4.3.2 | A famous example | 215 |
| Appendix A: A brief excursus into R | 217 | |
| A.1 | Typing into the R console | 217 |
| A.2 | Assignments | 218 |
| A.3 | R vectors and linear algebra | 220 |
| A.4 | Subsetting | 221 |
| A.5 | Different types of objects | 222 |
| A.6 | Expressions and functions | 225 |
| A.7 | Loops and vectorization | 227 |
| A.8 | Environments | 228 |
| A.9 | Time series objects | 229 |
| A.10 | R Scripts | 231 |
| A.11 | Miscellanea | 232 |
| Appendix B: The sde Package | 233 | |
| BM | 234 | |
| cpoint | 235 | |
| DBridge | 236 | |
| dcElerian | 237 | |
| dcEuler | 238 | |
| dcKessler | 238 | |
| dcOzaki | 239 | |
| dcShoji | 240 | |
| dcSim | 241 | |
| DWJ | 243 | |
| EULERloglik | 243 | |
| gmm | 245 | |

| | |
