	<i>Preface</i>	<i>page xv</i>
	<i>Conventions</i>	<i>xviii</i>
1	Introduction	1
	1.1 Equilibrium Thermodynamics	2
	1.1.1 On the Description of Macroscopic Systems	2
	1.1.2 Thermodynamic Entropy	4
	1.1.3 Conjugate Intensive Quantities and Equations of State	8
	1.1.4 Densities	9
	1.1.5 Alternative Representations, Thermodynamic Potentials	11
	1.1.6 Condensation and the Van der Waals–Maxwell Theory	14
	1.2 From Micro to Macro: Statistical Mechanics	18
	1.2.1 Microcanonical Ensemble	20
	1.2.2 Canonical Ensemble	21
	1.2.3 Grand Canonical Ensemble	25
	1.2.4 Examples: Two Models of a Gas	26
	1.3 Linking Statistical Mechanics and Thermodynamics	29
	1.3.1 Boltzmann’s Principle and the Thermodynamic Limit	29
	1.3.2 Deriving the Equation of State of the Ideal Gas	37
	1.3.3 The Basic Structure	38
	1.4 Magnetic Systems	38
	1.4.1 Phenomenology: Paramagnets vs. Ferromagnets	39
	1.4.2 A Simple Model for a Magnet: The Ising Model	40
	1.4.3 Thermodynamic Behavior	43
	1.5 Some General Remarks	50
	1.5.1 Role of the Thermodynamic Limit	50
	1.5.2 On the Role of Simple Models	52
	1.6 About This Book	53
	1.6.1 Contents, Chapter by Chapter	54
	1.6.2 The Existing Literature	57
2	The Curie–Weiss Model	60
	2.1 Mean-Field Approximation	60
	2.2 Behavior for Large N When $h = 0$	62
	2.3 Behavior for Large N When $h \neq 0$	68

2.4	Bibliographical References	72
2.5	Complements and Further Reading	73
2.5.1	The “Naive” Mean-Field Approximation	73
2.5.2	Alternative Approaches to Analyze the Curie-Weiss Model	73
2.5.3	Critical Exponents	76
2.5.4	Links with Other Models on \mathbb{Z}^d	80
3	The Ising Model	82
3.1	Finite-Volume Gibbs Distributions	82
3.2	Thermodynamic Limit, Pressure and Magnetization	86
3.2.1	Convergence of Subsets	86
3.2.2	Pressure	87
3.2.3	Magnetization	91
3.2.4	A First Definition of Phase Transition	94
3.3	One-Dimensional Ising Model	94
3.4	Infinite-Volume Gibbs States	98
3.5	Two Families of Local Functions	101
3.6	Correlation Inequalities	102
3.6.1	GKS Inequalities	102
3.6.2	FKG Inequality	104
3.6.3	Consequences	105
3.7	Phase Diagram	109
3.7.1	Two Criteria for (Non)Uniqueness	110
3.7.2	Spontaneous Symmetry Breaking at Low Temperatures	115
3.7.3	Uniqueness at High Temperature	123
3.7.4	Uniqueness in Nonzero Magnetic Field	126
3.7.5	Summary of What Has Been Proved	133
3.8	Proof of the Correlation Inequalities	135
3.8.1	Proof of the GKS Inequalities	135
3.8.2	Proof of the FKG Inequality	136
3.9	Bibliographical References	139
3.10	Complements and Further Reading	141
3.10.1	Kramers–Wannier Duality	141
3.10.2	Mean-Field Bounds	143
3.10.3	An Alternative Proof of the FKG Inequality	145
3.10.4	Transfer Matrix and Markov Chains	148
3.10.5	Ising Antiferromagnet	149
3.10.6	Random-Cluster and Random-Current Representations	150
3.10.7	Non-Translation-Invariant Gibbs States and Interfaces	156
3.10.8	Gibbs States and Local Behavior in Large Finite Systems	163
3.10.9	Absence of Analytic Continuation of the Pressure	167
3.10.10	Metastable Behavior in Finite Systems	170
3.10.11	Critical Phenomena	172

	3.10.12 Exact Solution	176
	3.10.13 Stochastic Dynamics	176
4	Liquid–Vapor Equilibrium	177
	4.1 Lattice Gas Approximation	178
	4.2 Canonical Ensemble and Free Energy	180
	4.3 Grand Canonical Ensemble and Pressure	184
	4.4 Equivalence of Ensembles	186
	4.5 An Overview of the Rest of the Chapter	188
	4.6 Concentration and Typical Configurations	188
	4.6.1 Typical Densities	188
	4.6.2 Strict Convexity and Spatial Homogeneity	191
	4.7 Hard-Core Lattice Gas	193
	4.7.1 Parenthesis: Equivalence of Ensembles at the Level of Measures	195
	4.8 Nearest-Neighbor Lattice Gas	196
	4.8.1 Pressure	197
	4.8.2 Free Energy	199
	4.8.3 Typical Densities	200
	4.8.4 Pressure as a Function of ρ and ν	200
	4.9 Van der Waals Lattice Gas	202
	4.9.1 (Non)Convexity of the Free Energy	204
	4.9.2 An Expression for the Pressure: Maxwell's Construction	206
	4.10 Kac' Interactions and the Van der Waals Limit	210
	4.10.1 Van der Waals Limit of the Thermodynamic Potentials	213
	4.11 Bibliographical References	218
	4.12 Complements and Further Reading	219
	4.12.1 The Phase Separation Phenomenon	219
	4.12.2 Kac' Interactions When γ Is Small but Fixed	226
	4.12.3 Condensation, Metastability and the Analytic Structure of the Isotherms	227
5	Cluster Expansion	232
	5.1 Introduction	232
	5.2 Polymer Models	233
	5.3 Formal Expansion	234
	5.4 A Condition Ensuring Convergence	237
	5.5 When the Weights Depend on a Parameter	241
	5.6 The Case of Hard-Core Interactions	242
	5.7 Applications	243
	5.7.1 Ising Model in a Strong Magnetic Field	244
	5.7.2 Virial Expansion for the Lattice Gas	250
	5.7.3 Ising Model at High Temperature ($h = 0$)	252
	5.7.4 Ising Model at Low Temperature ($h = 0$)	254

5.8	Bibliographical References	260
6	Infinite-Volume Gibbs Measures	262
6.1	The Problem with Infinite Systems	264
6.2	Events and Probability Measures on Ω	265
6.2.1	The DLR Approach	270
6.3	Specifications and Measures	272
6.3.1	Kernels vs. Conditional Probabilities	276
6.3.2	Gibbsian Specifications	277
6.4	Existence	280
6.4.1	Convergence on Ω	281
6.4.2	Convergence on $\mathcal{M}_1(\Omega)$	283
6.4.3	Existence and Quasilocality	284
6.5	Uniqueness	286
6.5.1	Uniqueness vs. Sensitivity to Boundary Conditions	287
6.5.2	Dobrushin's Uniqueness Theorem	287
6.5.3	Application to Gibbsian Specifications	291
6.5.4	Uniqueness at High Temperature via Cluster Expansion	294
6.5.5	Uniqueness in One Dimension	295
6.6	Symmetries	296
6.6.1	Measures Compatible with a G-Invariant Specification	298
6.7	Translation-Invariant Gibbs Measures	299
6.7.1	Translation-Invariant Specifications	300
6.8	Convexity and Extremal Gibbs Measures	301
6.8.1	Properties of Extremal Gibbs Measures	302
6.8.2	Extremal Gibbs Measures and the Thermodynamic Limit	307
6.8.3	More on $\mu_{\beta,h}^+$, $\mu_{\beta,h}^-$ and $\mathcal{G}(\beta, h)$	308
6.8.4	Extremal Decomposition	313
6.9	The Variational Principle	319
6.9.1	Formulation in the Finite Case	319
6.9.2	Specific Entropy and Energy Density	321
6.9.3	Variational Principle for Gibbs Measures	325
6.10	Continuous Spins	328
6.10.1	General Definitions	328
6.10.2	DLR Formalism for Compact Spin Space	330
6.10.3	Symmetries	331
6.11	A Criterion for Nonuniqueness	332
6.12	Some Proofs	335
6.12.1	Proofs Related to the Construction of Probability Measures	335
6.12.2	Proof of Theorem 6.5	336
6.12.3	Proof of Theorem 6.6	337
6.12.4	Proof of Theorem 6.24	337
6.12.5	Proof of Proposition 6.39	338

6.13	Bibliographical References	342
6.14	Complements and Further Reading	343
6.14.1	The Equivalence of Ensembles	343
6.14.2	Pathologies of Transformations and Weaker Notions of Gibbsianness	344
6.14.3	Gibbs Measures and the Thermodynamic Formalism	345
7	Pirogov–Sinai Theory	346
7.1	Introduction	346
7.1.1	A Modified Ising Model	348
7.1.2	Models with Three or More Phases	348
7.1.3	Overview of the Chapter	350
7.1.4	Models with Finite-Range Translation-Invariant Interactions	351
7.2	Ground States and Peierls' Condition	352
7.2.1	Boundaries of a Configuration	355
7.2.2	m-Potentials	359
7.2.3	Lifting the Degeneracy	361
7.2.4	A Glimpse of the Rest of This Chapter	364
7.2.5	From Finite-Range Interactions to Interactions of Range 1	365
7.2.6	Contours and Their Labels	366
7.3	Boundary Conditions and Contour Models	368
7.3.1	Extracting the Contribution from the Ground State	369
7.3.2	Representing Probabilities Involving External Contours	373
7.4	Phase Diagram of the Blume–Capel Model	374
7.4.1	Heuristics	374
7.4.2	Polymer Models with τ -Stable Weights	379
7.4.3	Truncated Weights and Pressures, Upper Bounds on Partition Functions	383
7.4.4	Construction of the Phase Diagram	391
7.4.5	Results for the Pressure	394
7.4.6	Gibbs Measures at Low Temperature	396
7.5	Bibliographical References	403
7.6	Complements and Further Reading	403
7.6.1	Completeness of the Phase Diagram	403
7.6.2	Generalizations	404
7.6.3	Large- β Asymptotics of the Phase Diagram	404
7.6.4	Other Regimes	406
7.6.5	Finite-Size Scaling	407
7.6.6	Complex Parameters, Lee–Yang Zeros and Singularities	407
8	The Gaussian Free Field on \mathbb{Z}^d	409
8.1	Definition of the Model	410
8.1.1	Overview	412

8.2	Paraphenesis: Gaussian Vectors and Fields	414
8.2.1	Gaussian Vectors	414
8.2.2	Gaussian Fields and the Thermodynamic Limit	416
8.3	Harmonic Functions and the Discrete Green Identities	417
8.4	The Massless Case	420
8.4.1	Random Walk Representation	421
8.4.2	Thermodynamic Limit	424
8.5	The Massive Case	429
8.5.1	Random Walk Representation	430
8.5.2	Thermodynamic Limit	432
8.5.3	Limit $m \downarrow 0$	435
8.6	Bibliographical References	439
8.7	Complements and Further Reading	439
8.7.1	Random Walk Representations	439
8.7.2	Gradient Gibbs States	440
8.7.3	Effective Interface Models	440
8.7.4	Continuum Gaussian Free Field	441
8.7.5	A Link to Discrete Spin Systems	441
9	Models with Continuous Symmetry	444
9.1	$O(N)$ -Symmetric Models	444
9.1.1	Overview	446
9.2	Absence of Continuous Symmetry Breaking	448
9.2.1	Heuristic Argument	450
9.2.2	Proof of the Mermin–Wagner Theorem for $N = 2$	453
9.2.3	Proof of the Mermin–Wagner Theorem for $N \geq 3$	458
9.3	Digression on Gradient Models	459
9.4	Decay of Correlations	461
9.4.1	One-Dimensional Models	461
9.4.2	Two-Dimensional Models	463
9.5	Bibliographical References	468
9.6	Complements and Further Reading	469
9.6.1	Berezinskiĭ–Kosterlitz–Thouless Phase Transition	469
9.6.2	Generalizations	470
10	Reflection Positivity	472
10.1	Motivation: Some New Results for $O(N)$ -Type Models	472
10.2	Models Defined on the Torus	473
10.3	Reflections	474
10.3.1	Reflection Positive Measures	476
10.3.2	Examples of Reflection Positive Measures	477
10.4	The Chessboard Estimate	480
10.4.1	Proof of the Estimate	480
10.4.2	Application: The Ising Model in a Large Magnetic Field	486

10.4.3	Application: The Two-Dimensional Anisotropic XY Model	487
10.5	The Infrared Bound	496
10.5.1	Models to Be Considered	496
10.5.2	Application: Orientational Long-Range Order in the $O(N)$ Model	497
10.5.3	Gaussian Domination and the Infrared Bound	500
10.6	Bibliographical Remarks	504
A	Notes	506
B	Mathematical Appendices	513
B.1	Real Analysis	514
B.1.1	Elementary Inequalities	514
B.1.2	Double Sequences	514
B.1.3	Subadditive Sequences	515
B.1.4	Functions Defined by Series	516
B.2	Convex Functions	516
B.2.1	Convexity vs. Continuity	517
B.2.2	Convexity vs. Differentiability	519
B.2.3	The Legendre Transform	522
B.2.4	Legendre Transform of Nondifferentiable Functions	525
B.3	Complex Analysis	526
B.4	Metric Spaces	529
B.5	Measure Theory	529
B.5.1	Measures and Probability Measures	529
B.5.2	Measurable Functions	532
B.6	Integration	532
B.6.1	Product Spaces	535
B.7	Lebesgue Measure	535
B.8	Probability	536
B.8.1	Random Variables and Vectors	536
B.8.2	Independence	537
B.8.3	Moments and Cumulants of Random Variables	538
B.8.4	Characteristic Function	539
B.8.5	Conditional Expectation	540
B.8.6	Conditional Probability	542
B.8.7	Random Vectors	543
B.9	Gaussian Vectors and Fields	543
B.9.1	Basic Definitions and Properties	543
B.9.2	Convergence of Gaussian Vectors	545
B.9.3	Gaussian Fields and Independence	546
B.10	The Total Variation Distance	547
B.11	Shannon Entropy	548
B.12	Relative Entropy	551

B.12.1	Definition, Basic Properties	551
B.12.2	Two Useful Inequalities	553
B.13	The Symmetric Simple Random Walk on \mathbb{Z}^d	554
B.13.1	Stopping Times and the Strong Markov Property	554
B.13.2	Local Limit Theorem	554
B.13.3	Recurrence and Transience	555
B.13.4	Discrete Potential Theory	557
B.14	The Isoperimetric Inequality on \mathbb{Z}^d	558
B.15	A Result on the Boundary of Subsets of \mathbb{Z}^d	560
C	Solutions to Exercises	563
