# Contents

<i>Preface</i>	vii
<i>Introduction</i>	ix
<i>Contents of Other Volumes</i>	xv

## **XI: SCATTERING THEORY**

1. <i>An overview of scattering phenomena</i>	1
2. <i>Classical particle scattering</i>	5
3. <i>The basic principles of scattering in Hilbert space</i>	16
Appendix 1 <i>Stationary phase methods</i>	37
Appendix 2 <i>Trace ideal properties of <math>f(x)g(-i\nabla)</math></i>	47
Appendix 3 <i>A general invariance principle for wave operators</i>	49
4. <i>Quantum scattering I: Two-body case</i>	54
5. <i>Quantum scattering II: N-body case</i>	75
6. <i>Quantum scattering III: Eigenfunction expansions</i>	96
Appendix <i>Introduction to eigenfunction expansions by the auxiliary space method</i>	112
7. <i>Quantum scattering IV: Dispersion relations</i>	116
8. <i>Quantum scattering V: Central potentials</i>	121
A. <i>Reduction of the S-matrix by symmetries</i>	121
B. <i>The partial wave expansion and its convergence</i>	127
C. <i>Phase shifts and their connection to the Schrödinger equation</i>	129
D. <i>The variable phase equation</i>	133
E. <i>Jost functions and Levinson's theorem</i>	136
F. <i>Analyticity of the partial wave amplitude for generalized Yukawa potentials</i>	143
G. <i>The Kohn variational principle</i>	147

Appendix 1	<i>Legendre polynomials and spherical Bessel functions</i>	149
Appendix 2	<i>Jost solutions for oscillatory potentials</i>	155
Appendix 3	<i>Jost solutions and the fundamental problems of scattering theory</i>	164
9.	<i>Long-range potentials</i>	169
10.	<i>Optical and acoustical scattering I: Schrödinger operator methods</i>	184
Appendix	<i>Trace class properties of Green's functions</i>	203
11.	<i>Optical and acoustical scattering II: The Lax-Phillips method</i>	210
Appendix	<i>The twisting trick</i>	241
12.	<i>The linear Boltzmann equation</i>	243
13.	<i>Nonlinear wave equations</i>	252
Appendix	<i>Conserved currents</i>	278
14.	<i>Spin wave scattering</i>	285
15.	<i>Quantum field scattering I: The external field</i>	293
16.	<i>Quantum field scattering II: The Haag-Ruelle theory</i>	317
17.	<i>Phase space analysis of scattering and spectral theory</i>	331
Appendix	<i>The RAGE theorem</i>	340
Notes		344
Notes on scattering theory on $C^*$ -algebras		382
Problems		385

**MATERIAL PREPRINTED FROM VOLUME IV**

XIII.6	<i>The absence of singular continuous spectrum I: General theory</i>	406
XIII.7	<i>The absence of singular continuous spectrum II: Smooth perturbations</i>	411
	A. <i>Weakly coupled quantum systems</i>	421
	B. <i>Positive commutators and repulsive potentials</i>	427
	C. <i>Local smoothness and wave operators for repulsive potentials</i>	433
XIII.8	<i>The absence of singular continuous spectrum III: Weighted <math>L^2</math> spaces</i>	438
	Notes	447
	Problems	450
	List of Symbols	455
	Index	457
