

Integration of rules and optimization in plant PowerOps	p. 1
Embedded systems design : optimization challenges	p. 16
Models for solving the travelling salesman problem	p. 17
Set variables and local search	p. 19
The temporal knapsack problem and its solution	p. 34
Simplifying diagnosis using LSAT : a propositional approach to reasoning from first principles	p. 49
The tree constraint	p. 64
Filtering algorithms for the NValue constraint	p. 79
Identifying and exploiting problem structures using explanation-based constraint programming	p. 94
A hybrid algorithm for a class of resource constrained scheduling problems	p. 110
On the minimal Steiner tree subproblem and its application in branch-and-price	p. 125
Constraint programming based column generation for employee timetabling	p. 140
Scheduling social golfers locally	p. 155
Multiconsistency and robustness with global constraints	p. 168
Mixed discrete and continuous algorithms for scheduling airborne astronomy observations	p. 183
Shorter path constraints for the resource constrained shortest path problem	p. 201
Improving the cooperation between the master problem and the subproblem in constraint programming based column generation	p. 217
Group construction for airline cabin crew : comparing constraint programming with branch and price	p. 228
A search-infer-and-relax framework for integrating solution methods	p. 243
Combining arc-consistency and dual Lagrangean relaxation for filtering CSPs	p. 258
Symmetry breaking and local search spaces	p. 273
Combination of among and cardinality constraints	p. 288
On the tractability of smooth constraint satisfaction problems	p. 304
A SAT-based decision procedure for mixed logical/integer linear problems	p. 320
Symmetry and search in a network design problem	p. 336
Integrating CSP decomposition techniques and BDDs for compiling configuration problems	p. 351
Formulations and reformulations in integer programming	p. 366
Nondeterministic control for hybrid search	p. 380
Computing explanations for the unary resource constraint	p. 396
