

Chapter 4	Cell Language	173
4.1	Communication and Languages	173
4.1.1	Macro-, Micro-, and Holo-Communications	174
4.1.2	The Universality of Double Articulations	177
4.1.3	Cell Language (Cellese) Defined	179
4.2	Some Linguistic Terms for Non-linguists	180
4.2.1	Double Articulation Extended to Triple Articulation	180
4.2.2	Rule-Governed Creativity	181
4.2.3	Syntagmatic Relation	182
4.2.4	Paradigmatic Relation	182
4.2.5	Arbitrariness of Signs	182
4.3	Application of the Information Theory to Signal Transduction in Living Cells	183
4.4	Isomorphism Between Cell and Human Languages	185
4.5	Isomorphism Between the Immune System and Human Language	188
4.6	Triple Articulation in Cell Language	189
4.7	Decoding DNA Based on the Semiotic Lessons Learned from Decoding the Rosetta Stone	190
4.7.1	Rule-Governed Creativity	198
4.7.2	Double Articulation also called Duality	198
4.7.3	Maximum Information Principle	199
4.7.4	Discreteness	199
4.7.5	Semanticity	199
4.8	The Biology–Linguistics Connection	199
4.9	The Origin of Biological Information	202
4.10	The von Neumann Questions and the Conformon Theory	209
4.11	Water as the Medium of the Cell (<i>Cellese</i>) and Cosmic Languages (<i>Cosmese</i>)	212
4.12	Cymatics and Chladni Patterns (or Figures)	215
4.13	Water as the Molecular Sensor of Sound Waves	216

2.3	Burgin's Parametric Definition of Information	20
2.4	Complementarity vs. Supplementarity	20
2.4.1	The Principle of Generalized Complementarity (PGC)	22
2.4.2	The Complementarian Logic	22
2.5	System vs. Systeme	24
2.6	Self-Organization, Dissipative Structures (<i>Dissipations</i>), and Self-Organizing Whenever and Wherever Needed (SOWAWN) Machines	27
2.7	The Generalized Franck–Condon Principle	29
2.8	The Atom–Cell Isomorphism	29
2.9	The Gnergy Principle of Organization (GPO)	33
2.10	The Principle of Irreducible Triadicity	34
2.11	Symmetries and Symmetry Breakings	34
2.12	The Association–Induction Hypothesis	35
2.13	The Fourth-Phase Water	37
2.13.1	The Ling–Pollack Water Structures	39
2.13.2	Coherence Domains and the Benveniste–Montagnier Experiments BMEs	39
2.13.3	Systeme Medicine: The Complementary Union of System Medicine and Environmental Medicine	41
2.14	Cell Water as a Four-Dimensional Proton Transfer Network: Water is to Cell Language What Air is to Human Language	43
2.15	The Equilibrium and Dissipative Structures of Water	47
Chapter 3	The Bhopalator	51
3.1	Three Stages of Development in Cell Biology	51
3.2	The Principles and Major Concepts Embedded in the Bhopalator Model of the Living Cell	54
3.2.1	The IDS–Cell Function Identity (ICFI) Hypothesis	56
3.2.2	The Information–Energy Complementarity in the Living Cell	58

3.2.3	Electromechanochemical Energy Transduction	58
3.2.4	The Wave–Particle Duality in the Living Cell	67
3.2.5	Three Categories of Enzyme Catalyzes	68
3.2.6	The GFCP, Pre-fit Mechanisms, and Scalar Enzyme Catalysis	70
3.2.7	The GFCP and Translational Enzyme Catalysis	71
3.2.8	The GFCP and Rotary Enzyme Catalysis	75
3.2.9	The Pre-fit Hypothesis	79
3.2.10	Allosterism, Bohr Effect, and Wyman’s Pseudolinkage	83
3.2.11	The Brownian Distance of Biopolymers	92
3.2.12	The Principle of Microscopic Reversibility	92
3.2.13	The Information–Energy Complementary Landscape Theory of Protein Folding	94
3.2.14	Three Classes of Molecular Structures in the Living Cell	97
3.2.15	Five Classes of Factors Affecting the Behavior of the Living Cell	99
3.2.16	An Atom–Cell Comparison Based on Aristotle’s Four Causes Doctrine	101
3.2.17	The Cell Force: A Comparison with the Gravitational Force	102
3.2.18	The Cell as the Atom of Semiosis	103
3.2.19	The Triadic Structures of the Living Cell	104
3.2.20	The Piscatawaytor: A Model of the Human Body Viewed as a Self-Organizing System of Bhopalators	105
3.2.21	The Human Body–Internet Metaphor (HIM)	107
3.3	The Mitochondrion — The Energy Source of the Living Cell	111
3.3.1	The Conformon Model of Oxidative Phosphorylation: Kinematic vs. Dynamic Aspects	115

3.3.2	Conformon Production, Transfer, and Utilization	119
3.3.3	Deconstructing the Chemiosmotic Model	122
3.3.4	A Comparison Between the Chemiosmotic and Conformon Models of Oxidative Phosphorylation	126
3.3.5	The Rochester–Noji–Helsinki (RoNoH) Model of Oxidative Phosphorylation	131
3.3.6	Mitchel vs. Williams Protons	136
3.3.7	Active vs. Passive Conformational Changes of Biopolymers	139
3.3.8	Active vs. Passive ATP Syntheses	140
3.3.9	Cytochrome c Oxidase an Electron-Driven Proton Sink and Pump	141
3.3.10	Proton-Transfer Chains/Complexes as the Fourth-Phase Water Structures of Ling and Pollack	149
3.4	The Conformon	150
3.4.1	Direct Experimental Evidence for Conformons or Conformational Waves	151
3.4.2	DNA Supercoils, the White Formula, and Conformons	151
3.4.3	Stress-Induced Duplex Destabilizations as Conformons	157
3.4.4	Virtual and Real Conformons: Mechanisms of Conformon Generation Based on the GFCP	158
3.4.5	The Quantization of Conformational Energies of Biopolymers	159
3.4.6	The Conformon Hypothesis of Energy-Coupled Processes in the Living Cell	160
3.4.7	The Conformon Model of Mechanical Force Generation from Chemical Reactions	162
3.4.8	The Conformon Model of Muscle Contraction	164

Chapter 4	Cell Language	173
4.1	Communication and Languages	173
4.1.1	Macro-, Micro-, and Holo-Communications	174
4.1.2	The Universality of Double Articulations	177
4.1.3	Cell Language (Cellese) Defined	179
4.2	Some Linguistic Terms for Non-linguists	180
4.2.1	Double Articulation Extended to Triple Articulation	180
4.2.2	Rule-Governed Creativity	181
4.2.3	Syntagmatic Relation	182
4.2.4	Paradigmatic Relation	182
4.2.5	Arbitrariness of Signs	182
4.3	Application of the Information Theory to Signal Transduction in Living Cells	183
4.4	Isomorphism Between Cell and Human Languages	185
4.5	Isomorphism Between the Immune System and Human Language	188
4.6	Triple Articulation in Cell Language	189
4.7	Decoding DNA Based on the Semiotic Lessons Learned from Decoding the Rosetta Stone	190
4.7.1	Rule-Governed Creativity	198
4.7.2	Double Articulation also called Duality	198
4.7.3	Maximum Information Principle	199
4.7.4	Discreteness	199
4.7.5	Semanticity	199
4.8	The Biology–Linguistics Connection	199
4.9	The Origin of Biological Information	202
4.10	The von Neumann Questions and the Conformon Theory	209
4.11	Water as the Medium of the Cell (<i>Cellese</i>) and Cosmic Languages (<i>Cosmese</i>)	212
4.12	Cymatics and Chladni Patterns (or Figures)	215
4.13	Water as the Molecular Sensor of Sound Waves	216

4.14	Sonocytology or “Cytocymatics”	219
4.15	Water Standing Waves (<i>Aquaresonances</i>) as the Possible Cause of the Origin of Life	221
4.16	Decoding CymaGlyphs May Be Akin to Decoding Hieroglyphs	221
4.17	The Water Thesis: Water Can Represent, Compute, and Communicate	222
4.18	Cosmic Language (<i>Cosmese</i>) as the Irreducible Triad of Wave Language (<i>CymaGlyphs</i>), Cell Language (e.g., <i>RNA glyphs</i>), and Human Language (e.g., <i>Hieroglyphs</i>)	225
4.19	CymaScope as an Experimental Tool for Connecting Mind and Matter	227
4.20	Life Supervenes on Water	227
4.21	The Dissipative-to-Equilibrium Reversibility (DER) Postulate of Aquastructures	231
4.22	Exosomes as Extracellular Text Messages That May Be Deciphered by Digital CymaScopy	234
Chapter 5	Matrix Mathematics of Genetics	239
5.1	The Petoukhov Coincidence	239
5.2	The Mathematical Similarity between the Genetic Code and the I-Ching Hexagrammatology	244
5.3	The Molecular Language (<i>Moleculese</i>)	248
Chapter 6	Biosemitotics	255
6.1	Concepts, Laws, and Principles	255
6.1.1	Molecular Machine	257
6.1.2	Dissipative Structures	257
6.1.3	Intracellular Dissipative Structures	257
6.1.4	The Law of Requisite Variety	258
6.1.5	Cell Language Theory	259
6.1.6	Biocybernetic Models of Living Systems and Processes: “Atorology”	259

6.2	A Comparison between Physics, Biology, and Philosophy	260
6.3	The Peircean Theory of Signs	261
6.3.1	Peircean Definition of Signs	261
6.3.2	Peircean Categories: Firstness, Secondness, and Thirdness	264
6.4	Macrosemiotics vs. Microsemiotics	264
6.5	Peircean Signs as Gnergons	266
6.6	The Quark Model of the Peircean Sign [279]	269
6.6.1	The Nine Types of Signs	270
6.6.2	The 10 Classes of Signs	272
6.6.3	Derivation of the 10 Classes of Signs from Nine Types of Signs Based on the Analogy between e-Signs and Quarks in Elementary Particle Physics	274
6.6.4	Derivation of “Nilsign” and Its Associated Category Called “Zeroneess” Based on the Quark Model of the Peircean Sign	276
6.6.5	The Neo-Semiotics and the Possible Meaning of Zeroneess	278
6.7	Application of the Concept of Signs to Molecular Biology: <i>Microsemiotics</i>	282
6.8	Real vs. Virtual Semiosis	283
6.9	Division of Sign Processes Based on the Nature and Size of Sign Processors	284
6.10	Peirce’s Metaphysics as the Basis for Unifying Sciences	286
Chapter 7	Applications of the Cell Language Theory to Biomedical Sciences	289
7.1	The Need for a New Paradigm in Biomedical Sciences	290
7.1.1	The Inefficiency of the Current Methods of Drug Development	291
7.1.2	Precision Medicine	291

7.2	Ribonoscopy	293
7.2.1	DNA Microarrays	293
7.2.2	The Microarray Data Interpretation Problem	296
7.2.3	Ribonoscopy is to Cell Biology What Spectroscopy is to Atomic Physics	301
7.3	Analysis of Human Breast Cancer Microarray Data	305
7.3.1	The Mechanism Circle-Based Analysis	306
7.3.2	PDE-Based Method for Identifying Patient-Specific Breast Cancer Genes	315
7.3.3	Can PDE Be to Cell Biology What PRE is to Atomic Physics?	326
7.3.4	The PDE-Based Approach to Discovering Dissipative Structure (or Dissipaton)-Targeting Drugs	328
7.3.5	Conserved Transcriptional Response to Cancer (CTRC): The First Law of Transcriptomics	330
Chapter 8	The Universality of the Planckian Distribution Equation	333
8.1	Blackbody Radiation and the Planckian Distribution Equation	333
8.2	Single-Molecule Enzyme Catalysis	336
8.2.1	Observation and Data	336
8.2.2	Explanation: Quantization of Energy Levels in Enzymes	338
8.2.3	RASER Model of Enzyme Catalysis	339
8.3	Examples of Long-Tailed Histograms Fitting PDE	341
8.3.1	Atomic Physics (Figure 8.6(a))	347
8.3.2	Protein Folding (Figure 8.6(b))	347
8.3.3	Single-Molecule Enzyme Kinetics of Cholesterol Oxidase (Figure 8.6(c))	349

8.3.4 mRNA Levels in Budding Yeast (Figure 8.6(d))	349
8.3.5 RNA Levels in Human Breast Tissues (Figure 8.6(e))	350
8.3.6 Human T-cell Receptor Variable Region Sequence Diversity (Figure 8.6(f))	350
8.3.7 7-Mer Frequency Distribution in <i>P. abyssi</i> (Figure 8.6(g))	351
8.3.8 Codon Usage Profile in the Human Genome (Figure 8.6(h))	352
8.3.9 Protein-Length Frequency Distribution in <i>H. influenza</i> (Figure 8.6(i))	352
8.3.10 Stress-Induced Alterations in the Neuroarchitecture of the Mouse Brain (Figure 8.6(j))	353
8.3.11 Impulse-Induced Electrocorticogram (ECoG) Response of the Rabbit Olfactory System (Figure 8.6(k))	353
8.3.12 fMRI Signals from the Human Brain before and after Psilocybin (Figure 8.6(l))	354
8.3.13 Sentence-Length Frequency Distributions in Private Letters (Figure 8.6(m))	354
8.3.14 Word-Length Frequency Distributions in English Text (Figure 8.6(n))	355
8.3.15 Word-Length Frequency Distribution in Kerry's Speech (Figure 8.6(o))	355
8.3.16 The Pitch Histogram of Sylvia Plath's Reading of Her Poem (Figure 8.6(p))	355
8.3.17 Decision-Time Histograms (Figure 8.6(q))	356
8.3.18 The 1996 and 2013 US Annual Income Distributions (Figures 8.6(r) and 8.6(s))	358
8.3.19 Polarized Cosmological Microwave Background (CMB) Radiation (Figure 8.6(t))	359

8.4	The Universality of the PDE	359
8.4.1	Planckian Processes as Selected Gaussian Processes	360
8.4.2	The Wave–Particle Duality in Biology and Medicine	361
8.5	The Planckian Information (I_p) as a New Measure of Organization	361
8.5.1	The Definition of Planckian Information, I_p	362
8.5.2	The First Law of Informatics: Information Can but Entropy Cannot Be Negative	363
8.5.3	The Brain Is both Entropic and Informational	366
8.6	Possible Relations among Planckian Information, Quanta, and Entropy	368
8.7	PDE-based CymaScopy (PCS) as a Novel Experimental Tool for Infostatistical Mechanics	371
Chapter 9	The Universality of the Irreducible Triadic Relation	377
9.1	The Peircean Sign as the Origin of the Irreducible Triadic Relation	377
9.2	Peirce’s Simple Concepts Applicable to Every Subject	379
9.3	ITR in Peirce’s Hypostatic Abstraction	383
9.4	Examples of ITRs	384
9.4.1	The Golden Ratio	384
9.4.2	The Fibonacci Numbers	386
9.4.3	Belousov–Zhabotinsky (BZ) Reaction (or the Brusselator)	389
9.4.4	Enzyme Catalysis	390
9.4.5	Gene Expression	391
9.4.6	Practopoiesis	391
9.4.7	ITR in Mathematics, Philosophy, Semiotics, and Religions	391

Chapter 10	The Philosophical Implications of the Cell Language Theory	395
10.1	Complementarism	395
10.1.1	Complementarity Between Complementarism and Merleau-Ponty's Flesh Ontology	396
10.1.2	Naturalized Phenomenology	397
10.2	Complementarism and Semiotics	398
10.3	Signs, Thoughts, and “Thoughtons”	401
10.4	The “New Jersey Theory of Mind” (NJTM)	404
10.5	A Theory of Consciousness	408
10.6	The Triadic Architectonics of Human Knowledge	410
10.7	On the Possible Relation Between Quantum Mechanics and Semiotics	411
10.8	The Hertz–Rosen–Pattee (HRP) Model of Reality	416
10.9	The <i>Signless</i> and the <i>Dao</i> as the Source of Everything Including Signs	418
10.10	Cybersemiotics	421
10.11	Practopoiesis	425
10.12	A Theory of the Origin of Information Based on Peircean Metaphysics	429
10.13	Information–Entropy Relation	432
10.14	A “Philosophical Table” for Classifying Information, Entropy, and Energy	434
10.15	The Information–Energy–Entropy Relation: The “NewJerseyator”	437
10.16	The First Law of Informatics: Information Can but Entropy Cannot Be Negative	440
10.17	Semiotics and Information Theory	441
10.18	The Model of the Universe	443
10.18.1	The Shillongator Model of the Universe	444
10.18.2	Semiotics of the Universe	449

10.18.3	Iconic Model of Reality	454
10.18.4	The Self-Knowing Universe and the Anthropic Cosmological Principle	457
10.19	The Universe as a Self-Organizing Musical Instrument (USOMI)	460
10.20	Semiotics as the Theory of Everything (TOE)	463
10.21	Triadic Monism	469
10.22	A Model of Consciousness	475
Chapter 11	Conclusions	481
	<i>References</i>	487
	<i>Appendix I</i>	523
	<i>Appendix II</i>	553
	<i>Index</i>	559
