List of contributors	5
Acknowledgements	9
Glossary	17
Foreword	25
<i>J.L. Peyraud</i>	
1. General introduction	27
<i>P. Nozière, L. Delaby, J.L. Peyraud and D. Sauvant</i>	
1.1 Context and objectives	27
1.2 Methods	27
1.3 Main advances	28
1.4 The content of the book	30
Section 1. The dietary supply	
2. Feed intake	33
<i>P. Faverdin, R. Baumont, M. Boval, J. Agabriel and R. Delagarde</i>	
2.1 Prediction of voluntary dry matter intake	33
2.2 Specificity of intake at grazing and its prediction	39
3. Energy supply	43
<i>D. Sauvant, P. Chapoutot, I. Ortigues-Marty and P. Nozière</i>	
3.1 From gross energy to net energy	43
3.2 The metabolisable nutrients	52
4. Protein and amino acids supply	61
<i>D. Sauvant, S. Lemosquet, P. Chapoutot and P. Nozière</i>	
4.1 The metabolisable protein	61
4.2 The amino acids digestible in the intestine of feeds and diets	69
5. Minerals, vitamins and water supply	79
<i>A. Boudon, B. Graulet, S. Giger-Reverdin, H. Archimède and F. Meschy</i>	
5.1 Minerals	79
5.2 Vitamins	83
5.3 Water	86

Section 2. The animal's requirements and responses to diets

6. Energy expenditures, efficiencies and requirements	91
<i>D. Sauvant, P. Nozière and I. Ortigues-Marty</i>	
6.1 Basic parameters of energy utilisation in ruminants	91
6.2 Processing indirect calorimetry data to assess energy requirements and responses	93
6.3 Energy expenditures and requirements of dairy animals	98
6.4 Energy evaluation of body variations in dairy females	101
6.5 Energy expenditures and requirements of growing and fattening animals	109
6.6 Energy expenditures and requirements of gestating animals	115
6.7 The heat production	115
7. Protein and amino acid expenditure, efficiency and requirements	119
<i>D. Sauvant, G. Cantalapiedra-Hijar, S. Lemosquet, P. Nozière, V. Berthelot and P. Faverdin</i>	
7.1 Updating non-productive N losses and PDI requirements	120
7.2 From productive expenditures to PDI requirements	124
7.3 The efficiency for protein synthesis and production in lactating animal	124
7.4 The protein efficiency for protein production in growing animals	130
7.5 The digestible amino acids (AADI) requirements for dairy cows	133
8. Minerals, vitamins and water requirements	139
<i>A. Boudon, B. Graulet, S. Giger-Reverdin, H. Archimède and F. Meschy</i>	
8.1 Minerals	139
8.2 Vitamins	144
8.3 Water requirements	147
9. Dry matter intake and milk yield responses to dietary changes	149
<i>P. Faverdin, D. Sauvant, L. Delaby, S. Lemosquet, J.B. Daniel and P. Schmidely</i>	
9.1 Dry matter intake response to dietary changes	149
9.2 Milk yield and composition responses to dietary changes	159
9.3 Conclusions	176
10. Growth response to dietary changes in growing-finishing animals	177
<i>J. Agabriel, V. Berthelot, G. Cantalapiedra-Hijar and D. Sauvant</i>	
10.1 Effects of differences in levels of energy intake	177
10.2 Effects of differences in levels of PDI supplies	182
10.3 Effects of nature of energy nutrients supplied by diets	184
11. Milk fat content and composition	185
<i>P. Schmidely, A. Ferlay, G. Maxin, C. Hurtaud and J.L. Peyraud</i>	
11.1 Digestion and metabolism of lipids in dairy ruminants	185
11.2 Response of milk fat secretion and milk fatty acid composition to dietary factors	186
11.3 Towards a more analytical nutrient-based prediction	190
12. Fatty acid composition of muscles	193
<i>V. Berthelot and D. Gruffat</i>	
12.1 Effects of type of diet	194
12.2 Response laws to dietary fatty acids	198
12.3 Conclusions	201

13. Faecal and urinary nitrogen excretion	203
<i>D. Sauvant, P. Faverdin, J.L. Peyraud and P. Nozière</i>	
13.1 Faecal nitrogen	203
13.2 Urinary nitrogen	204
14. Enteric methane emissions	209
<i>D. Sauvant, S. Giger-Reverdin and M. Eugène</i>	
14.1 Prediction of CH ₄ production	209
14.2 Mitigation strategies	210
15. Digestive welfare and rumen acidosis	213
<i>D. Sauvant, S. Giger-Reverdin and J.L. Peyraud</i>	
15.1 Global description of rumen acidosis	213
15.2 Digestive welfare, chewing activities and rumen acidosis	213
15.3 Influence of dietary items	215
15.4 Influence of feed additives	217
15.5 Recommendations for diet formulation	217
Section 3. Practices for rationing	
16. General principles of rationing	221
<i>L. Delaby, J. Agabriel and R. Delagarde</i>	
16.1 Prediction of the animal requirements and the intake capacity	222
16.2 Feed characteristics	222
16.3 Ration calculation	225
16.4 Animal production responses	228
16.5 Feeding strategies	229
17. Dairy cows	233
<i>P. Faverdin, R. Delagarde, S. Lemosquet, A. Boudon and L. Delaby</i>	
17.1 The dynamics of lactation: potential milk yield and body reserves variation	233
17.2 Requirements	238
17.3 Milk response	242
17.4 Voluntary intake	246
17.5 Intake at grazing	250
17.6 Drinking water intake	256
17.7 Strategies of feeding management	256
17.8 Conclusions	266
18. Beef cows and calves	269
<i>J. Agabriel and A. De La Torre</i>	
18.1 Requirements for non-productive and productive functions of beef cows	271
18.2 Intake of beef cows	280
18.3 Feeding strategies and nutritional recommended allowances for beef cows	283
18.4 Suckling calf	287
18.5 Conclusions	288

19. Growing and finishing cattle	289
<i>J. Agabriel, B. Sepchat, G. Cantalapiedra-Hijar and I. Ortigues-Marty</i>	
19.1 Growth and body composition	290
19.2 The gain composition and its modelling	293
19.3 Requirements and recommended allowances	297
19.4 Voluntary intake	304
19.5 Recommended allowances and feeding strategies	307
19.6 Conclusions	317
20. Dairy, growing and fattening sheep	319
<i>P. Hassoun, V. Berthelot and F. Bocquier</i>	
20.1 Dairy and suckling ewe systems	319
20.2 Growing/fattening lambs and replacement ewe lambs	333
20.3 Conclusions	337
21. Dairy and growing goats	339
<i>D. Sauvant and S. Giger-Reverdin</i>	
21.1 Expenditures and requirements of lactating goats	339
21.2 Expenditures and requirements for gestation	350
21.3 Expenditures and requirements for growth of replacement does and young males	354
21.4 Intake	360
21.5 Multiple responses of dairy goats to feed and nutrient supplies around satisfaction of requirements	362
21.6 Feedlots feeding	367
21.7 Pastures, grazing and range	368
21.8 Conclusions	374
22. Specificities of feeding ruminant livestock in warm areas	375
<i>H. Archimède, C. Marie-Magdeleine, M. Boval and D. Sauvant</i>	
22.1 Chemical composition of feed resources in warm regions	375
22.2 Feeding value	380
22.3 Specificity of livestock in warm regions	385
22.4 Nutritional requirements in warm environments	387
22.5 Animal responses to feeds and nutrients	391
22.6 Specificity of feeding at pasture in warm regions	395
22.7 Conclusions	399

Section 4. The reference values of feed: tables and predicion

23. Methods for feed evaluation and databases	403
<i>R. Baumont, D. Sauvant, G. Maxin, P. Chapoutot and P. Nozière</i>	
23.1 <i>In vivo</i> measurements of digestibility and voluntary intake	403
23.2 <i>In situ</i> measurements of feed degradability in the rumen and digestibility in the intestine	405
23.3 Enzymatic methods to predict digestibility and degradability	406
23.4 Databases of feed composition and nutritive values	407
24. Calculation of feed values in INRA system: feed tables and prediction equations	411
<i>R. Baumont, D. Sauvant, G. Maxin, P. Chapoutot, G. Tran, A. Boudon, S. Lemosquet and P. Nozière</i>	
24.1 Principles of establishment of feed tables	411
24.2 Principles of feed values calculation and prediction	413
24.3 Organic constituents	416
24.4 Organic matter and cell wall digestibility	421
24.5 Voluntary intake and fill values	426
24.6 Energy value	429
24.7 Protein value	432
24.8 Mineral value determination (Ca, P and Mg)	437
25. INRA feed tables used in France and temperate areas	441
<i>R. Baumont, G. Tran, P. Chapoutot, G. Maxin, D. Sauvant, V. Heuzé, S. Lemosquet and A. Lamadon</i>	
25.1 Short description of the contents	441
25.2 Classification of feeds	442
25.3 Terminology and symbols used	443
25.4 Definition of vegetation stages of forages	444
25.5 Feed tables	445
Appendix 25.1. Typical contents of water-soluble carbohydrates (WSC) and starch of forages (g/kg DM)	544
Appendix 25.2. Fermentation characteristics of silages	545
Appendix 25.3. Correction of OMd of direct cut grass silages according to their DM content and consequences on fill (UE) and energy (UF) values	548
Appendix 25.4. Values of the main inorganic mineral sources (in %)	548
26. INRA feed tables for warm areas	549
<i>D. Sauvant, H. Archimède, G. Tran, A. Lamadon and R. Baumont</i>	
26.1 The context: agro-climatic conditions	549
26.2 Origins of the data	549
26.3 The chemical composition	550
26.4 Intake and fill value	550
26.5 Energy value	551
26.6 Protein value	552
26.7 Feed tables for warm areas	555

Databases and references

Databases used	589
1. The 'BoviDig' database	589
2. The 'OviDig' database	590
3. The 'AADlg' database	591
4. The 'Rumener' database	592
5. The 'Methafour' database	593
6. The 'BodyCompCow' database	593
7. The 'MoSarCO' database	594
8. The 'LysMetINRAreq' database	595
