

Contents

1. THERMAL NOISE	1
1.1 Introduction	1
1.2 Noise power	3
1.3 Equipartition	3
1.4 The microscopic mechanism of thermal noise	4
1.5 Macroscopic equipartition	9
1.6 Nyquist	12
1.7 The quantum limit on linear amplifiers	15
1.8 Generalised circuits	17
1.9 The temperature of radiation resistance	19
1.10 Experimental evidence	20
1.11 Noise thermometry	20
1.12 Thermal noise in non-ohmic devices in thermal equilibrium	22
1.13 Thermal noise in non-equilibrium conditions	24
1.14 Salami methods	25
1.15 The impedance field method	27
1.16 Diffusion noise	29
1.17 The small-signal diode	30
1.18 Other types of noise	32
References	33
2. 1/f NOISE AND BURST NOISE	35
2.1 Introduction and characterisation of 1/f noise	35
2.2 Mathematical models	37
2.3 Two-stage or two-function models	39
2.4 The Allan variance	40
2.5 Fractional order integration	41
2.6 Infra-red divergence	42
2.7 Physical dimensions	43
2.8 Experimental evidence	44
2.9 Fluctuation in number or in mobility?	49
2.10 Is 1/f noise Gaussian?	51

2.11	Amorphous solids	52
2.12	Electrolytes	53
2.13	Burst noise	54
2.14	Summary	55
2.15	The sampling of $1/f$ noise	56
	Bibliographies	56
	References	57
3.	NOISE IN FERROMAGNETIC AND FERROELECTRIC MATERIALS	61
3.1	Introduction	61
3.2	Ferromagnetic materials: Barkhausen noise and domains	61
3.3	The spectrum of Barkhausen noise	67
3.4	Thermal effects	71
3.5	Amorphous solids	72
3.6	Ferrites and semiconductors	73
