Preface	xi
<hr/>	
1. Introduction	1
<hr/>	
1.1 Why Nonlinear Control ?	1
1.2 Nonlinear System Behavior	4
1.3 An Overview of the Book	12
1.4 Notes and References	13
Part I: Nonlinear Systems Analysis	14
<i>Introduction to Part I</i>	<i>14</i>
<hr/>	
2. Phase Plane Analysis	17
<hr/>	
2.1 Concepts of Phase Plane Analysis	18
2.1.1 Phase Portraits	18
2.1.2 Singular Points	20
2.1.3 Symmetry in Phase Plane Portraits	22
2.2 Constructing Phase Portraits	23
2.3 Determining Time from Phase Portraits	29
2.4 Phase Plane Analysis of Linear Systems	30
2.5 Phase Plane Analysis of Nonlinear Systems	32
2.6 Existence of Limit Cycles	36
2.7 Summary	38
2.8 Notes and References	38
2.9 Exercises	38
	vii

3. Fundamentals of Lyapunov Theory	40
3.1 Nonlinear Systems and Equilibrium Points	41
3.2 Concepts of Stability	47
3.3 Linearization and Local Stability	53
3.4 Lyapunov's Direct Method	57
3.4.1 <i>Positive Definite Functions and Lyapunov Functions</i>	58
3.4.2 <i>Equilibrium Point Theorems</i>	61
3.4.3 <i>Invariant Set Theorems</i>	68
3.5 System Analysis Based on Lyapunov's Direct Method	76
3.5.1 <i>Lyapunov Analysis of Linear Time-Invariant Systems</i>	77
3.5.2 <i>Krasovskii's Method</i>	83
3.5.3 <i>The Variable Gradient Method</i>	86
3.5.4 <i>Physically Motivated Lyapunov Functions</i>	88
3.5.5 <i>Performance Analysis</i>	91
3.6 Control Design Based on Lyapunov's Direct Method	94
3.7 Summary	95
3.8 Notes and References	96
3.9 Exercises	97
4. Advanced Stability Theory	100
4.1 Concepts of Stability for Non-Autonomous Systems	101
4.2 Lyapunov Analysis of Non-Autonomous Systems	105
4.2.1 <i>Lyapunov's Direct Method for Non-Autonomous Systems</i>	105
4.2.2 <i>Lyapunov Analysis of Linear Time-Varying Systems</i>	114
4.2.3 <i>* The Linearization Method for Non-Autonomous Systems</i>	116
4.3 <i>* Instability Theorems</i>	117
4.4 <i>* Existence of Lyapunov Functions</i>	120
4.5 Lyapunov-Like Analysis Using Barbalat's Lemma	122
4.5.1 <i>Asymptotic Properties of Functions and Their Derivatives</i>	122
4.5.2 <i>Barbalat's Lemma</i>	123
4.6 Positive Linear Systems	126
4.6.1 <i>PR and SPR Transfer Functions</i>	126
4.6.2 <i>The Kalman-Yakubovich Lemma</i>	130
4.6.3 <i>Positive Real Transfer Matrices</i>	131
4.7 The Passivity Formalism	132
4.7.1 <i>Block Combinations</i>	132
4.7.2 <i>Passivity in Linear Systems</i>	137

4.8	* Absolute Stability	142
4.9	* Establishing Boundedness of Signals	147
4.10	* Existence and Unicity of Solutions	151
4.11	Summary	153
4.12	Notes and References	153
4.13	Exercises	154

5. Describing Function Analysis **157**

5.1	Describing Function Fundamentals	158
	5.1.1 <i>An Example of Describing Function Analysis</i>	158
	5.1.2 <i>Applications Domain</i>	162
	5.1.3 <i>Basic Assumptions</i>	164
	5.1.4 <i>Basic Definitions</i>	165
	5.1.5 <i>Computing Describing Functions</i>	167
5.2	Common Nonlinearities In Control Systems	169
5.3	Describing Functions of Common Nonlinearities	172
5.4	Describing Function Analysis of Nonlinear Systems	179
	5.4.1 <i>The Nyquist Criterion and Its Extension</i>	180
	5.4.2 <i>Existence of Limit Cycles</i>	182
	5.4.3 <i>Stability of Limit Cycles</i>	184
	5.4.4 <i>Reliability of Describing Function Analysis</i>	186
5.5	Summary	187
5.6	Notes and References	188
5.7	Exercises	188

Part II: Nonlinear Control Systems Design **191**

Introduction to Part II 191

6. Feedback Linearization **207**

6.1	Intuitive Concepts	208
	6.1.1 <i>Feedback Linearization And The Canonical Form</i>	208
	6.1.2 <i>Input-State Linearization</i>	213
	6.1.3 <i>Input-Output Linearization</i>	216
6.2	Mathematical Tools	229
6.3	Input-State Linearization of SISO Systems	236

6.4	Input-Output Linearization of SISO Systems	246
6.5	* Multi-Input Systems	266
6.6	Summary	270
6.7	Notes and References	271
6.8	Exercises	271

7. Sliding Control

7.1	Sliding Surfaces	277
7.1.1	<i>A Notational Simplification</i>	278
7.1.2	* <i>Filippov's Construction of the Equivalent Dynamics</i>	283
7.1.3	<i>Perfect Performance - At a Price</i>	285
7.1.4	<i>Direct Implementations of Switching Control Laws</i>	289
7.2	Continuous Approximations of Switching Control Laws	290
7.3	The Modeling/Performance Trade-Offs	301
7.4	* Multi-Input Systems	303
7.5	Summary	306
7.6	Notes and References	307
7.7	Exercises	307

8. Adaptive Control

8.1	Basic Concepts in Adaptive Control	312
8.1.1	<i>Why Adaptive Control ?</i>	312
8.1.2	<i>What Is Adaptive Control ?</i>	315
8.1.3	<i>How To Design Adaptive Controllers ?</i>	323
8.2	Adaptive Control of First-Order Systems	326
8.3	Adaptive Control of Linear Systems With Full State Feedback	335
8.4	Adaptive Control of Linear Systems With Output Feedback	339
8.4.1	<i>Linear Systems With Relative Degree One</i>	340
8.4.2	<i>Linear Systems With Higher Relative Degree</i>	346
8.5	Adaptive Control of Nonlinear Systems	350
8.6	Robustness of Adaptive Control Systems	353
8.7	* On-Line Parameter Estimation	358
8.7.1	<i>Linear Parametrization Model</i>	359
8.7.2	<i>Prediction-Error-Based Estimation Methods</i>	364
8.7.3	<i>The Gradient Estimator</i>	364
8.7.4	<i>The Standard Least-Squares Estimator</i>	370

8.7.5	<i>Least-Squares With Exponential Forgetting</i>	374	
8.7.6	<i>Bounded-Gain Forgetting</i>	376	
8.7.7	<i>Concluding Remarks and Implementation Issues</i>	381	
8.8	Composite Adaptation		382
8.9	Summary		388
8.10	Notes and References		389
8.11	Exercises		389
<hr/>			
9.	Control of Multi-Input Physical Systems		392
<hr/>			
9.1	Robotics as a Prototype		393
9.1.1	<i>Position Control</i>	394	
9.1.2	<i>Trajectory Control</i>	397	
9.2	Adaptive Robot Trajectory Control		403
9.2.1	<i>The Basic Algorithm</i>	404	
9.2.2	<i>* Composite Adaptive Trajectory Control</i>	411	
9.3	Putting Physics in Control		416
9.3.1	<i>High-Frequency Unmodeled Dynamics</i>	416	
9.3.2	<i>Conservative and Dissipative Dynamics</i>	418	
9.3.3	<i>Robotics as a Metaphor</i>	419	
9.4	Spacecraft Control		422
9.4.1	<i>The Spacecraft Model</i>	422	
9.4.2	<i>Attitude Control</i>	425	
9.5	Summary		432
9.6	Notes and References		433
9.7	Exercises		433
	BIBLIOGRAPHY		437
	INDEX		459
