## 1 Introduction 1

1.1 The Open Economy Setting 1  
1.2 Solution Methods 3  
    1.2.1 Perturbation Method 5  
    1.2.2 Projection Methods and Accuracy Tests 6  
1.3 Policy Goals, Welfare, and Scenarios 13  
1.4 Plan of the Book 15  
    Computational Exercises 17

## 2 A Small Open Economy Model 19

2.1 Introduction 19  
2.2 Flexible Price Model 20  
    2.2.1 Closure Condition 20  
    2.2.2 Consumption and Labor 21  
    2.2.3 Production and Pricing 24  
    2.2.4 Monetary and Fiscal Authorities 25  
    2.2.5 Exports and Foreign Debt 27  
    2.2.6 Calibration 27  
2.3 Solution: Projection Method 28  
    2.3.1 Approximating Functions 28  
    2.3.2 Euler Errors 29  
    2.3.3 Accuracy Checks 29  
2.4 Stochastic Dynamic Simulations 32  
    2.4.1 Impulse-Response Analysis 32  
    2.4.2 Recurring Shocks 34  
    2.4.3 Welfare Distributions 37

2.5	Effects of a Demand Shock	39
2.5.1	Scenario: Export Shock	39
2.5.2	Stochastic Dynamic Simulations	40
2.6	Concluding Remarks	43
	Computational Exercise: Stochastic Processes	43
<b>3</b>	<b>Sticky Domestic Prices</b>	<b>47</b>
3.1	Introduction	47
3.2	Model with Calvo Pricing	49
3.2.1	Households—Consumption and Labor	49
3.2.2	Production and Calvo Pricing	50
3.2.3	Government Sector	52
3.2.4	Exports and Foreign Debt	53
3.3	Computational Analysis	53
3.3.1	Approximating Functions	53
3.3.2	Euler Errors	54
3.3.3	Accuracy Checks	54
3.4	Stochastic Simulations	56
3.4.1	Impulse-Response Analysis	56
3.4.2	Macroeconomic Correlations	58
3.4.3	Welfare Analysis	59
3.5	Output Gaps and Sensitivity Analysis	62
3.5.1	Output Gap Environment	62
3.5.2	Taylor Rule with an Output Gap	64
3.6	Concluding Remarks	65
	Computational Exercise: Output in the Taylor Rule	66
<b>4</b>	<b>Income and Consumption Taxes</b>	<b>69</b>
4.1	Introduction	69
4.2	Model with Taxes	71
4.2.1	Household Euler Equations	71
4.2.2	Firms—Production and Calvo Pricing	72
4.2.3	Monetary Policy	72
4.2.4	Taxes and Domestic Debt	73
4.2.5	Exports and Foreign Debt	73
4.2.6	Calibration	73
4.3	Model Solution	74
4.3.1	Decision Rules	74
4.3.2	Euler Errors	75
4.3.3	Accuracy Checks	75

- 4.4 Stochastic Simulations 75
  - 4.4.1 Impulse-Response Analysis 75
  - 4.4.2 Welfare Comparisons 78
- 4.5 Scenario Analysis 79
  - 4.5.1 Alternative Fiscal Policy Regimes 79
  - 4.5.2 Impulse-Responses 80
- 4.6 Concluding Remarks 82
  - Computational Exercise: Model Validation with VARs 83
- 5 Current Account Dynamics 85**
  - 5.1 Introduction 85
  - 5.2 Model with Endogenous Exports 86
    - 5.2.1 Households—Consumption and Labor 87
    - 5.2.2 Firms—One-Sector Production and Pricing 89
    - 5.2.3 Monetary and Fiscal Authorities 89
    - 5.2.4 Exports and Foreign Debt 90
  - 5.3 Computational Analysis 90
    - 5.3.1 Decision Rules and Euler Errors 90
    - 5.3.2 Accuracy Checks 91
  - 5.4 Productivity Shocks 91
    - 5.4.1 Impulse-Response Analysis 91
    - 5.4.2 Stochastic Simulations 93
  - 5.5 Scenario Analysis 94
    - 5.5.1 Low Export Elasticity 94
    - 5.5.2 Government Expenditure 96
  - 5.6 Concluding Remarks 98
    - Computational Exercise: Real Exchange-Rate Volatility 100
- 6 Capital and Tobin's  $Q$  103**
  - 6.1 Introduction 103
  - 6.2 Model with Capital Accumulation 105
    - 6.2.1 Householders and Entrepreneurs 105
    - 6.2.2 One-Sector Production 108
    - 6.2.3 Monetary and Fiscal Authorities 109
    - 6.2.4 Exports and Foreign Debt 109
  - 6.3 Solution Algorithm 109
    - 6.3.1 Approximating Equations 109
    - 6.3.2 Accuracy Tests 112
  - 6.4 Stochastic Dynamic Simulations 113
    - 6.4.1 Impulse-Response Functions 113
    - 6.4.2 Macroeconomic Correlations 114

6.5	Scenario Analysis— $Q$ Targeting	114
6.5.1	Productivity Shocks	115
6.5.2	Export Shocks	117
6.6	Concluding Remarks	117
	Computational Exercise: Risk and $Q$ growth	119
<b>7</b>	<b>Economy with Natural Resources</b>	<b>121</b>
7.1	Introduction	121
7.2	Two-Sector Model	122
7.2.1	Householders and Entrepreneurs	122
7.2.2	Two-Sector Production and Pricing	125
7.2.3	Monetary and Fiscal Authorities	126
7.2.4	Exports and Foreign Debt	127
7.3	Solution Algorithm	127
7.3.1	Euler Errors	128
7.3.2	Accuracy Checks	128
7.4	Simulation Analysis	128
7.4.1	Impulse-Response Paths	128
7.4.2	Stochastic Simulations	131
7.5	Terms-of-Trade Shocks	132
7.6	Concluding Remarks	134
	Computational Exercise: Real Exchange Cross-Correlations	135
<b>8</b>	<b>Financial Frictions</b>	<b>139</b>
8.1	Introduction	139
8.2	DSGE Model with Banking	140
8.2.1	Household Sector: Consumption and Saving	140
8.2.2	Firms—Production, Pricing, and Borrowing	143
8.2.3	Monetary and Fiscal Authorities	144
8.2.4	Exports and Foreign Debt	145
8.2.5	Financial Sector	146
8.3	Solution Algorithm	147
8.4	Simulation Analysis	149
8.4.1	Impulse-Response Paths	149
8.4.2	Macroeconomic Correlations	150
8.5	Scenario Analysis	152
8.6	Concluding Remarks	152
	Computational Exercise: The “Great Moderation”	153

- 9 Wage Rigidities 157**
  - 9.1 Introduction 157
  - 9.2 Model with Sticky Wages 158
    - 9.2.1 Household Sector 158
    - 9.2.2 Firms—Production, Pricing, and Loans 161
    - 9.2.3 Monetary Policy 162
    - 9.2.4 Taxes and Domestic Debt 163
    - 9.2.5 Exports and Foreign Debt 163
    - 9.2.6 Financial Sector 163
  - 9.3 Solution Algorithm 164
    - 9.3.1 Approximating Functions 164
    - 9.3.2 Accuracy Checks 165
  - 9.4 Simulation Analysis 165
    - 9.4.1 Impulse-Response Paths 165
    - 9.4.2 Macroeconomic Correlations 167
  - 9.5 Sensitivity Analysis 168
  - 9.6 Concluding Remarks 170
    - Computational Exercise: Dunlop-Tarshis Puzzle 171
  
- 10 Habit Persistence 173**
  - 10.1 A DSGE Model with Habit Persistence 174
    - 10.1.1 Household Sector 174
    - 10.1.2 Production Sector 177
    - 10.1.3 Government Sector 178
    - 10.1.4 External Sector 179
    - 10.1.5 Financial Sector 179
  - 10.2 Solution Algorithm 180
    - 10.2.1 Approximating Equations 180
    - 10.2.2 Euler Errors 181
    - 10.2.3 Accuracy Checks 181
  - 10.3 Stochastic Simulations 181
    - 10.3.1 Impulse-Responses to a Productivity Shock 181
    - 10.3.2 Macroeconomic Correlations 183
  - 10.4 Simulating Alternative Scenarios 185
    - 10.4.1 No-Inflation Targeting 185
    - 10.4.2 International Shocks 186
  - 10.5 Concluding Remarks 187
    - Computational Exercise: Output and Interest Rate 188

<b>11</b>	<b>International Capital Flows and Adjustment</b>	<b>191</b>
11.1	Capital Reversals	192
11.1.1	Sudden Stops and Contagion Effects	192
11.1.2	Simulating a Reversal in Capital Flows	193
11.2	Continuing Inflows	194
11.2.1	Current Account Deficits and Asset-Price Inflation	194
11.2.2	Simulating Continuing Capital Inflows	195
11.3	Future Research	196

## **Appendixes**

<b>A</b>	<b>Definition of Symbols</b>	<b>201</b>
<b>B</b>	<b>Definition of Variables</b>	<b>203</b>
<b>C</b>	<b>The Computer Algorithm</b>	<b>205</b>
