

1.8.4	Endogenous job destruction: continuous time	32
1.8.5	Endogenous job destruction: discrete time	33
2	Business cycle properties	37
2.1	Dynamics of the benchmark model	38
2.1.1	Loglinearization of the job creation condition	38
2.1.2	Asymmetries in the cycle	39
2.2	A calibration	41
2.2.1	Calibrated parameters	41
2.2.2	The business cycle in the calibrated model	43
2.3	Volatility in alternative structures	46
2.3.1	Small labor surplus	47
2.3.2	Credible bargaining	47
2.3.3	Entry costs and amplification	48
2.4	Nonlinear dynamics in the labor market	50
2.4.1	Solving models with search frictions	51
2.4.2	Impulse response functions	52
2.4.3	Other nonlinearities: the small surplus assumption and the zero bound for vacancies	54
2.5	Discussion of the literature and remaining issues	56
2.6	Chapter appendix	58
2.6.1	Log-linearization	58
2.6.2	Labor market data	60
3	Efficiency in the labor market	61
3.1	Efficiency in continuous time	62
3.1.1	The Hosios condition with exogenous separations	62
3.1.2	Hosios inefficient separations versus surplus-inefficient separations	65
3.2	Competitive search equilibrium	67
3.3	A discussion of policy instruments	71
3.4	Efficiency in a discrete time dynamic setting	75
3.4.1	Hosios in a discrete setting	75
3.4.2	Constrained efficient fluctuations	78
3.5	Discussion of the literature and remaining issues	79
3.6	Chapter appendix	82
3.6.1	Continuous time constrained efficiency: baseline	82
3.6.2	Continuous time constrained efficiency: endogenous job destruction	83
3.6.3	Moen's efficiency result	85

3.6.4	Coincidence of the wage in the decentralized equilibrium with entry costs and Moen's efficient wage	86
3.6.5	Hosios in discrete time	87
3.6.6	Efficient layoff taxes with endogenous separations	87
4	Firm size and strategic bargaining	89
4.1	Strategic bargaining with discrete labor	90
4.2	The large firm matching model with one type of worker	91
4.2.1	Firm's program and wage bargaining	91
4.2.2	Large-firm/small-firm equivalence result under constant returns to scale	93
4.2.3	An overemployment result under decreasing returns to scale	93
4.2.4	Second-best efficiency	95
4.3	The large firm with several worker types	96
4.3.1	Environment	96
4.3.2	Wage solutions and equilibrium	97
4.3.3	Generalization: different bargaining weights and the "underemployment" result	99
4.4	Predetermined capital and labor with intrafirm bargaining	100
4.5	Dynamic implications of intrafirm bargaining	101
4.6	Discussion of the literature and remaining issues	103
4.7	Chapter appendix	105
4.7.1	Value function of the firms	105
4.7.2	Value function of workers and Nash bargaining	106
4.7.3	Sketch of solution with identical bargaining power	106
4.7.4	Extension to capital	108
II	FRICTIONS IN FINANCIAL AND GOODS MARKETS	111
5	Credit and labor market frictions: the CL model	113
5.1	Random matching in financial markets	114
5.2	Integrating labor and financial market frictions	115
5.2.1	Projects, creditors, and "the firm"	117
5.2.2	Entry in credit and labor markets	117
5.2.3	Bargaining over credit	121
5.2.4	Block bargaining over wages	122
5.2.5	Equilibrium	124

5.3	Efficiency and Hosios in the financial market	127
5.3.1	Social planner's problem with frictional labor and credit market	127
5.3.2	Socially optimal credit and labor market tightness	128
5.3.3	Hosios in credit and labor markets	129
5.3.4	Properties of the constrained efficient allocation	130
5.4	Discussion of the literature and remaining issues	134
5.5	Chapter appendix	135
5.5.1	Detail of the calculations of repayment ψ	135
5.5.2	Wage setting: block bargaining	136
5.5.3	Social planner's problem	137
5.5.4	Alternative bargaining arrangements: varying the specificity in labor relationships	138
6	Financial multipliers and business cycles	143
6.1	The equilibrium dynamics of the CL model	144
6.1.1	Projects and creditors: asset values	144
6.1.2	Bargaining and equilibrium in the financial market	145
6.1.3	Job creation	147
6.1.4	Wage bargaining	148
6.2	A financial multiplier and the amplification of business cycles	148
6.2.1	Understanding amplification	149
6.2.2	Volatility and efficiency in financial markets	150
6.3	Quantitative properties	151
6.3.1	Calibration strategy	151
6.3.2	Quantitative moments and dynamics	154
6.4	Introducing shocks in financial markets	155
6.4.1	Parameterization and calibration	156
6.4.2	Stationary and business cycle moments	156
6.5	Discussion of the literature and remaining issues	157
6.6	Chapter appendix	160
6.6.1	Deriving a job creation condition	160
6.6.2	Financial repayment	161
6.6.3	Workers and wages	162
6.6.4	An extended setup	163
6.6.5	Elasticity of labor market tightness to productivity shocks	164
7	Goods market frictions: LG and CLG models	167
7.1	Search in goods markets	168

7.1.1	Timing and notations	168
7.1.2	Random matching in the goods market and goods market tightness	170
7.1.3	The new concepts in a search in the goods market economy	171
7.2	The steady-state equilibrium in the LG model	172
7.2.1	Employment, consumption, and goods market tightness	172
7.2.2	The job creation equation	174
7.2.3	Price determination	176
7.2.4	Wage determination	178
7.3	Efficiency and Hosios in the LG model	180
7.4	The CLG model	182
7.4.1	Job creation condition and equilibrium	183
7.4.2	Price, wage, and payments to creditors	185
7.4.3	Efficiency in the CLG model	185
7.5	Extending the CLG model to endogenous effort	186
7.6	Discussion of the literature and remaining issues	188
7.7	Chapter appendix	190
7.7.1	Documenting consumption flows in CLG	190
7.7.2	Stock-flow equations in the CLG model	192
7.7.3	Bellman equations in the LG model and free entry	194
7.7.4	The viability of the decentralized LG economy	194
7.7.5	Bellman equations of the CLG model and free entry	197
7.7.6	Price determination in CLG	199
7.7.7	Efficiency in CLG	200
8	The propagation of business cycles in CLG models	203
8.1	The discrete time CLG model	204
8.1.1	Search and matching in the goods markets	204
8.1.2	Timing of an investment project	204
8.1.3	Disposable income and price determination	206
8.1.4	Other markets	208
8.2	Equilibrium dynamics of the CLG model	209
8.2.1	Equilibrium	209
8.2.2	Job creation condition	209
8.2.3	A log-linear relation	210
8.3	Extension to endogenous search intensity in the goods market	211

8.4	Quantitative implications I: the propagation of productivity shocks	213
8.4.1	Calibration strategy	213
8.4.2	Business cycle moments and impulse responses	215
8.5	Quantitative implications II: the propagation of demand shocks	216
8.5.1	The relation between utility, income, and consumption	216
8.5.2	Fiscal innovations	217
8.5.3	Fiscal multipliers	218
8.5.4	Calibration parameters	219
8.6	Discussion of the literature and remaining issues	220
8.7	Concluding words	223
8.8	Chapter appendix	223
8.8.1	Appendix for dynamics of CLG	223
8.8.2	Price and wage determination	225
	Bibliography	231
