CONTENTS

About the Authors iii
Preface xv

1 Relationships between Two Variables 1
1.1 Examples of Bivariate Relationships 1
1.1.1 Bivariate Frequency Distributions 5
1.2 The Correlation Coefficient 6
1.2.1 The Correlation Coefficient for a Bivariate Frequency Distribution 8
1.2.2 The Limits of r 9
1.2.3 Nonsense Correlations and Other Matters 9
1.2.4 A Case Study 11
1.3 Probability Models for Two Variables 12
1.3.1 Discrete Bivariate Probability Distribution 12
1.3.2 The Bivariate Normal Distribution 14
1.4 The Two-Variable Linear Regression Model 15
1.4.1 A Conditional Model 16
1.4.2 Estimates and Estimators 18
1.4.3 Least-Squares Estimators 19
1.4.4 Decomposition of the Sum of Squares 21
1.4.5 A Numerical Example 22
1.5 Inference in the Two-Variable, Least-Squares Model 23
1.5.1 Properties of LS Estimators 23
1.5.2 Gauss–Markov Theorem 25
1.5.3 Inference Procedures 25
1.5.4 Numerical Example (Continued from Section 1.4.5) 28
1.6 Analysis of Variance in the Two-Variable Regression Model 29
1.7 Prediction in the Two-Variable Regression Model 31
1.8 Gasoline Consumption: A Preliminary Analysis 33
Appendix
1.1 To prove var(b) = $\sigma^2/\sum x^2$ 35
1.2 To derive the mean and variance of the sampling distribution of a 35

1.3 To derive cov(a, b) 36
1.4 Gauss–Markov theorem 36
1.5 To derive var(e_0) 37
Problems 37

2 Further Aspects of Two-Variable Relationships 41
2.1 Time as a Regressor 42
2.1.1 Constant Growth Curves 43
2.1.2 Numerical Example 43
2.2 Transformations of Variables 44
2.2.1 Log-Log Transformations 45
2.2.2 Semilog Transformations 46
2.2.3 Reciprocal Transformations 47
2.3 An Empirical Example of a Nonlinear Relation: U.S. Inflation and Unemployment 49
2.4 Lagged Dependent Variable as Regressor 52
2.4.1 An Introduction to Asymptotics 53
2.4.2 Convergence in Probability 54
2.4.3 Convergence in Distribution 55
2.4.4 The Autoregressive Equation 56
2.5 Stationary and Nonstationary Series 57
2.5.1 Unit Root 59
2.5.2 Numerical Illustration 59
2.6 Maximum Likelihood Estimation of the Autoregressive Equation 61
2.6.1 Maximum Likelihood Estimators 61
2.6.2 Properties of Maximum Likelihood Estimators 63
Appendix
2.1 Change of variables in density functions 64
2.2 Maximum likelihood estimators for the AR(1) model 65
Problems 66

3 The k-Variable Linear Equation 69
3.1 Matrix Formulation of the k-Variable Model 70
3.1.1 The Algebra of Least Squares 70
3.1.2 Decomposition of the Sum of Squares 72
3.1.3 Equation in Deviation Form 73
3.2 Partial Correlation Coefficients 76
3.2.1 Sequential Buildup of the Explained Sum of Squares 78
3.2.2 Partial Correlation Coefficients and Multiple Regression Coefficients 81
3.2.3 General Treatment of Partial Correlation and Multiple Regression Coefficients 82
3.3 The Geometry of Least Squares 83
3.4 Inference in the k-Variable Equation 86
3.4.1 Assumptions 86
3.4.2 Mean and Variance of b 87

3.4.3 Estimation of σ^2 89
3.4.4 Gauss–Markov Theorem 89
3.4.5 Testing Linear Hypotheses about β 90
3.4.6 Restricted and Unrestricted Regressions 95
3.4.7 Fitting the Restricted Regression 96
3.5 Prediction 99
Appendix
3.1 To prove $r_{12.3} = (r_{12} - r_{13}r_{23})/\sqrt{1-r_{13}^2}\sqrt{1-r_{23}^2}$ 100
3.2 Solving for a single regression coefficient in a multiple regression 101
3.3 To show that minimizing $\boldsymbol{a}'\boldsymbol{a}$ subject to $\boldsymbol{X}'\boldsymbol{a} = \boldsymbol{c}$ gives $\boldsymbol{a} = \boldsymbol{X}(\boldsymbol{X}'\boldsymbol{X})^{-1}\boldsymbol{c}$ 103
3.4 Derivation of the restricted estimator $\boldsymbol{b}_*$ 103
Problems 104

4 Some Tests of the k-Variable Linear Equation for Specification Error 109
4.1 Specification Error 109
4.1.1 Possible Problems with u 110
4.1.2 Possible Problems with X 110
4.1.3 Possible Problems with β 111
4.2 Model Evaluation and Diagnostic Tests 112
4.3 Tests of Parameter Constancy 113
4.3.1 The Chow Forecast Test 113
4.3.2 The Hansen Test 116
4.3.3 Tests Based on Recursive Estimation 117
4.3.4 One-Step Ahead Prediction Errors 118
4.3.5 CUSUM and CUSUMSQ Tests 119
4.3.6 A More General Test of Specification Error: The Ramsey RESET Test 121
4.4 A Numerical Illustration 121
4.5 Tests of Structural Change 126
4.5.1 Test of One Structural Change 127
4.5.2 Tests of Slope Coefficients 128
4.5.3 Tests of Intercepts 128
4.5.4 Summary 129
4.5.5 A Numerical Example 130
4.5.6 Extensions 132
4.6 Dummy Variables 133
4.6.1 Introduction 133
4.6.2 Seasonal Dummies 134
4.6.3 Qualitative Variables 135
4.6.4 Two or More Sets of Dummy Variables 137
4.6.5 A Numerical Example 137
Appendix
4.1 To show $\text{var}(d) = \sigma^2[\boldsymbol{I}_{n_2} + \boldsymbol{X}_2(\boldsymbol{X}_1'\boldsymbol{X}_1)^{-1}\boldsymbol{X}_2']$ 138
Problems 139

5 Maximum Likelihood (ML), Generalized Least Squares (GLS), and Instrumental Variable (IV) Estimators 142

5.1 Maximum Likelihood Estimators 142
5.1.1 Properties of Maximum Likelihood Estimators 143

5.2 ML Estimation of the Linear Model 145

5.3 Likelihood Ratio, Wald, and Lagrange Multiplier Tests 147
5.3.1 Likelihood Ratio (LR) Tests 147
5.3.2 The Wald (W) Test 148
5.3.3 Lagrange Multiplier (LM) Test 149

5.4 ML Estimation of the Linear Model with Nonspherical Disturbances 151
5.4.1 Generalized Least Squares 152

5.5 Instrumental Variable (IV) Estimators 153
5.5.1 Special Case 156
5.5.2 Two-Stage Least Squares (2SLS) 157
5.5.3 Choice of Instruments 157
5.5.4 Tests of Linear Restrictions 158

Appendix
5.1 Change of variables in density functions 158
5.2 Centered and uncentered R^2 159
5.3 To show that $e_*'X(X'X)^{-1}X'e_* = e_*'e_* - e'e$ 160

Problems 161

6 Heteroscedasticity and Autocorrelation 162

6.1 Properties of OLS Estimators 163

6.2 Tests for Heteroscedasticity 166
6.2.1 The White Test 166
6.2.2 The Breusch-Pagan/Godfrey Test 167
6.2.3 The Goldfeld-Quandt Test 168
6.2.4 Extensions of the Goldfeld-Quandt Test 168

6.3 Estimation Under Heteroscedasticity 170
6.3.1 Estimation with Grouped Data 171
6.3.2 Estimation of the Heteroscedasticity Relation 171

6.4 Autocorrelated Disturbances 174
6.4.1 Forms of Autocorrelation: Autoregressive and Moving Average Schemes 175
6.4.2 Reasons for Autocorrelated Disturbances 176

6.5 OLS and Autocorrelated Disturbances 176

6.6 Testing for Autocorrelated Disturbances 178
6.6.1 Durbin-Watson Test 179
6.6.2 The Wallis Test for Fourth-Order Autocorrelation 182
6.6.3 Durbin Tests for a Regression Containing Lagged Values of the Dependent Variable 182
6.6.4 Breusch-Godfrey Test 185
6.6.5 Box-Pierce-Ljung Statistic 187

6.7 Estimation of Relationships with Autocorrelated Disturbances 188

6.8 Forecasting with Autocorrelated Disturbances 192
6.9 Autoregressive Conditional Heteroscedasticity (ARCH) 195
Appendix
6.1 LM test for multiplicative heteroscedasticity 198
6.2 LR test for groupwise homoscedasticity 200
6.3 Properties of the ARCH(1) process 201
Problems 202

7 Univariate Time Series Modeling 204
7.1 A Rationale for Univariate Analysis 205
7.1.1 The Lag Operator 206
7.1.2 ARMA Modeling 207
7.2 Properties of AR, MA, and ARMA Processes 207
7.2.1 AR(1) Process 207
7.2.2 AR(2) Process 209
7.2.3 MA Processes 213
7.2.4 ARMA Processes 214
7.3 Testing for Stationarity 215
7.3.1 Graphical Inspection 216
7.3.2 Integrated Series 220
7.3.3 Trend Stationary (TS) and Difference Stationary (DS) Series 220
7.3.4 Unit Root Tests 223
7.3.5 Numerical Example 226
7.4 Identification, Estimation, and Testing of ARIMA Models 228
7.4.1 Identification 228
7.4.2 Estimation 229
7.4.3 Diagnostic Testing 230
7.5 Forecasting 231
7.5.1 MA(1) Process 232
7.5.2 ARMA(1,1) Process 233
7.5.3 ARIMA(1,1,0) Process 234
7.6 Seasonality 235
7.7 A Numerical Example: Monthly Housing Starts 236
Problems 243

8 Autoregressive Distributed Lag Relationships 244
8.1 Autoregressive Distributed Lag Relations 244
8.1.1 A Constant Elasticity Relation 245
8.1.2 Reparameterization 245
8.1.3 Dynamic Equilibrium 246
8.1.4 Unit Elasticity 246
8.1.5 Generalizations 247
8.2 Specification and Testing 248
8.2.1 General to Simple and Vice Versa 248
8.2.2 Estimation and Testing 250
8.2.3 Exogeneity 253

8.2.4 Exogeneity Tests 256
8.2.5 The Wu-Hausman Test 257
8.3 Nonstationary Regressors 259
8.4 A Numerical Example 265
8.4.1 Stationarity 266
8.4.2 Cointegration 266
8.4.3 A Respecified Relationship 270
8.4.4 A General ADL Relation 271
8.4.5 A Reparameterization 275
8.5 Nonnested Models 280
Appendix
8.1 Nonsingular linear transformations of the variables in an equation 282
8.2 To establish the equality of the test statistics in Eqs. (8.37) and (8.41) 284
Problems 285

9 Multiple Equation Models 287
9.1 Vector Autoregressions (VARs) 287
9.1.1 A Simple VAR 287
9.1.2 A Three-Variable VAR 292
9.1.3 Higher-Order Systems 294
9.2 Estimation of VARs 295
9.2.1 Testing the Order of the VAR 296
9.2.2 Testing for Granger Causality 296
9.2.3 Forecasting, Impulse Response Functions, and Variance Decomposition 297
9.2.4 Impulse Response Functions 298
9.2.5 Orthogonal Innovations 299
9.2.6 Variance Decomposition 301
9.3 Vector Error Correction Models 301
9.3.1 Testing for Cointegration Rank 302
9.3.2 Estimation of Cointegrating Vectors 303
9.3.3 Estimation of a Vector Error Correction Model 305
9.4 Simultaneous Structural Equation Models 305
9.5 Identification Conditions 309
9.6 Estimation of Structural Equations 314
9.6.1 Nonstationary Variables 317
9.6.2 System Methods of Estimation 317
Appendix
9.1 Seemingly Unrelated Regressions (SUR) 318
9.2 Higher-order VARs 320
9.2.1 A VAR(1) Process 320
9.2.2 A VAR(2) Process 321
Problems 322

10 Generalized Method of Moments 327
10.1 The Method of Moments 328
10.2 OLS as a Moment Problem 329
10.3 Instrumental Variables as a Moment Problem 330
10.4 GMM and the Orthogonality Condition 333
10.5 Distribution of the GMM estimator 335
10.6 Applications 336
10.6.1 Two-Stage Least Squares, and Tests of Overidentifying Restrictions 336
10.6.2 Wu-Hausman Tests Revisited 338
10.6.3 Maximum Likelihood 342
10.6.4 Euler Equations 343
10.7 Readings 344
Problems 345

11 A Smorgasbord of Computationally Intensive Methods 348
11.1 An Introduction to Monte Carlo Methods 348
11.1.1 Some Guidelines for Monte Carlo Experiments 349
11.1.2 An Example 350
11.1.3 Generating Pseudorandom Numbers 352
11.1.4 Presenting the Results 354
11.2 Monte Carlo Methods and Permutation Tests 359
11.3 The Bootstrap 362
11.3.1 The Standard Error of the Median 362
11.3.2 An Example 363
11.3.3 The Parametric Bootstrap 365
11.3.4 Residual Resampling: Time Series and Forecasting 366
11.3.5 Data Resampling: Cross-Section Data 369
11.3.6 Some Remarks on Econometric Applications of the Bootstrap 369
11.4 Nonparametric Density Estimation 370
11.4.1 Some General Remarks on Nonparametric Density Estimation 375
11.4.2 An Application: The Wage Effects of Unions 376
11.5 Nonparametric Regression 379
11.5.1 Extension: The Partially Linear Regression Model 383
11.6 References 385
Problems 385

12 Panel Data 388
12.1 Sources and Types of Panel Data 389
12.2 The Simplest Case—The Pooled Estimator 390
12.3 Two Extensions to the Simple Model 390
12.4 The Random Effects Model 391
12.5 Random Effects as a Combination of Within and Between Estimators 392

12.6 The Fixed Effects Model in the Two-Period Case 395
12.7 The Fixed Effects Model with More Than Two Time Periods 397
12.8 The Perils of Fixed Effects Estimation 399
12.8.1 Example 1: Measurement Error in X 399
12.8.2 Example 2: Endogenous X 402
12.9 Fixed Effects or Random Effects? 403
12.10 A Wu-Hausman Test 403
12.11 Other Specification Tests and an Introduction to Chamberlain's Approach 404
12.11.1 Formalizing the Restrictions 406
12.11.2 Fixed Effects in the General Model 407
12.11.3 Testing the Restrictions 407
12.12 Readings 408
Problems 409

13 Discrete and Limited Dependent Variable Models 412
13.1 Types of Discrete Choice Models 412
13.2 The Linear Probability Model 414
13.3 Example: A Simple Descriptive Model of Union Participation 415
13.4 Formulating a Probability Model 418
13.5 The Probit 419
13.6 The Logit 424
13.7 Misspecification in Binary Dependent Models 426
13.7.1 Heteroscedasticity 426
13.7.2 *Misspecification in the Probit and Logit* 427
13.7.3 Functional Form: What Is the Right Model to Use? 430
13.8 Extensions to the Basic Model: Grouped Data 432
13.8.1 Maximum Likelihood Methods 432
13.8.2 Minimum χ^2 Methods 433
13.9 Ordered Probit 434
13.10 Tobit Models 436
13.10.1 The Tobit as an Extension of the Probit 436
13.10.2 Why Not Ignore "The Problem"? 439
13.10.3 Heteroscedasticity and the Tobit 440
13.11 Two Possible Solutions 441
13.11.1 Symmetrically Trimmed Least Squares 442
13.11.2 Censored Least Absolute Deviations (CLAD) Estimator 444
13.12 Treatment Effects and Two-Step Methods 446
13.12.1 The Simple Heckman Correction 447
13.12.2 Some Cautionary Remarks about Selectivity Bias 449
13.12.3 The Tobit as a Special Case 450
13.13 Readings 452
Problems 452

Appendix A

A.1 Vectors 455
- A.1.1 Multiplication by a Scalar 456
- A.1.2 Addition and Subtraction 456
- A.1.3 Linear Combinations 456
- A.1.4 Some Geometry 456
- A.1.5 Vector Multiplication 458
- A.1.6 Equality of Vectors 458

A.2 Matrices 459
- A.2.1 Matrix Multiplication 459
- A.2.2 The Transpose of a Product 460
- A.2.3 Some Important Square Matrices 461
- A.2.4 Partitioned Matrices 463
- A.2.5 Matrix Differentiation 464
- A.2.6 Solution of Equations 465
- A.2.7 The Inverse Matrix 466
- A.2.8 The Rank of a Matrix 467
- A.2.9 Some Properties of Determinants 471
- A.2.10 Properties of Inverse Matrices 472
- A.2.11 More on Rank and the Solution of Equations 473
- A.2.12 Eigenvalues and Eigenvectors 476
- A.2.13 Properties of Eigenvalues and Eigenvectors 478
- A.2.14 Quadratic Forms and Positive Definite Matrices 483

Appendix B

B.1 Random Variables and Probability Distributions 485

B.2 The Univariate Normal Probability Distribution 486

B.3 Bivariate Distributions 487

B.4 Relations between the Normal, χ^2, t, and F Distributions 489

B.5 Expectations in Bivariate Distributions 490

B.6 Multivariate Densities 490

B.7 Multivariate Normal pdf 492

B.8 Distributions of Quadratic Forms 493

B.9 Independence of Quadratic Forms 495

B.10 Independence of a Quadratic Form and a Linear Function 496

Appendix C 497

Appendix D 499
