

Contents

1	Introduction	1
2	Overview	3
2.1	Asset Volatility	3
2.1.1	(Generalized) AutoRegressive Conditional Heteroscedasticity	4
2.1.2	Stochastic Volatility	5
2.1.3	Realized Variance Measures	6
2.1.4	Intraday Volatility	8
2.2	Outlook	9
3	Estimating Stochastic Volatility Models Using Realized Measures	13
3.1	Introduction	13
3.2	Stochastic Volatility and Realized Measures	15
3.2.1	Realized Volatility Measures	15
3.2.2	The Extended Stochastic Volatility Model	16
3.2.3	The Endogeneity Problem	17
3.2.4	Simulation Study	19
3.2.5	Parameter Estimation and Model Diagnostics	21
3.3	Model Extensions	22
3.3.1	The ESV Model with Leverage	22
3.3.2	Long-Range Dependence	22
3.4	Empirical Application	24
3.4.1	Data	24
3.4.2	Estimation Results and Model Diagnostics	24
3.4.3	Forecasting Results	26
3.5	Conclusions	28
4	Forecasting Realized Variance Measures Using Time-Varying Coefficient Models	42
4.1	Introduction	42
4.2	Methodology	44
4.2.1	Setup and Existing Approaches	44
4.2.2	State-Space HAR Models	45
4.3	Application	47
4.3.1	Estimation and Full-Sample Results	48
4.3.2	Forecasting Performance	50
4.4	Conclusion	51

5	Asset Volatility Under Prospect Theory Investors	65
5.1	Introduction	65
5.2	Behavioral Realized Volatility	66
5.3	Model	69
5.4	Empirical Application	71
5.4.1	Data	71
5.4.2	Estimation Results	71
5.4.3	Forecasting Performance	72
5.5	Conclusion	73
6	A Mixed Frequency Stochastic Volatility Model for Intraday Stock Market Returns	85
6.1	Introduction	85
6.2	The Basic MFSV Model	88
6.2.1	Model Specification	88
6.2.2	Stochastic Properties of the MFSV Model	89
6.3	Parameter Estimation and Model Diagnostics	92
6.3.1	SML Estimation	92
6.3.2	Diagnostics	94
6.4	Model Extensions	95
6.4.1	Leverage	95
6.4.2	Overnight Effects	96
6.5	Empirical Application	96
6.5.1	Data	96
6.5.2	Estimation Results and Model Diagnostics	97
6.5.3	Out-of-sample Forecasting Experiment	99
6.6	Conclusions	101
7	Conclusions	125
