

CONTENTS

Preface	v
1. Post-war economic growth and the nature and significance of the micro-electronics industry	1
Introduction	1
The global economic context	3
The electronics sector: A major growth-pole	6
The trend towards convergence	7
Continuation of technical progress	8
The changing competitive balance	9
Hardware and software	10
Barriers to entry	10
The electronics industry in the Third World	12
The electronics industry in four developing economies	17
The evolution of computer-integrated manufacturing	27
2. Diffusion of micro-electronics-related innovations	33
Patterns of diffusion	35
Computers	35
National variations in product and process innovation	37
Innovation in small and large firms	39
Civilian and military usage	41
The service and tertiary sectors	42
Telecommunications	45
The manufacturing sector	50
Micro-electronics, appropriate technologies and the Third World	57
Assessing the overall diffusion of micro-electronics-related innovations	62
3. Methodological problems in assessing the links between micro-electronics and employment	67
A brief history of the employment/technical change debate	68
Four schools of thought	68
General-equilibrium models	71

Micro-electronics and employment revisited

Electronics and unemployment	73
The difficulty of assessing the effect of micro-electronics on employment	75
The problem of technological determinism	76
Distinguishing embodied technical change from disembodied technical change	78
Identifying the micro-electronic component in technical change	80
Micro-electronics technology and employment	81
4. Micro-electronics and the quantum of employment	83
Micro-electronics and employment: Eight levels of discourse	85
Process-level studies	85
Plant-level studies	88
Firm-level studies	91
Industry-level studies	93
Regional-level studies	100
Sector-level studies	101
Macro-economic, national-level studies	103
Meta-level studies	111
Can these levels of discourse be reconciled?	115
5. Micro-electronics, the nature of work and changing skills in the workforce	121
Micro-electronics-related innovations, skills and the nature of work	122
Changing skill profiles and the diffusion of micro-electronics	127
Skills in the supplying industry	127
Skills in industries using micro-electronics	130
Micro-electronics and the quality of working life	134
Micro-electronics-related innovations and the gender division of labour	137
6. Micro-electronics and employment: Some policy implications	143
Micro-electronics and employment: The linkages	144
Micro-electronics, economic growth and employment: The policy environment	147
Japan	151
United States	154
United Kingdom	157
France	158
Singapore	160
Micro-electronics and employment: Some additional policy considerations	162
The length of the working week	163
The "rehumanisation of work"	165
The locus of work	166
Meeting the needs of the Third World	168
Bibliography	171
