<i>Preface</i>	vi
<i>List of contributors</i>	ix
<i>The definition and scope of sports medicine</i>	xi
Part 1 Introduction	
1.1 The development, objectives and activities of the IOC Medical Commission	3
1.2 The development, objectives and activities of the FIMS	7
Part 2 The impact of regular training on human biological systems	
2.1 The musculoskeletal system	15
2.2 The cardiovascular system	40
2.3 The respiratory system	49
2.4 Metabolic capacity	58
2.5 The central nervous system	69
2.6 The endocrine system	80
Part 3 Assessment of physical and functional capacity	
3.1 General physical capacity	89
3.2 Special performance capacity	97
3.3 Physiological, medical, biomechanical and biochemical measurements	109
3.4 Exercise testing and ergometers	121
Part 4 Environmental conditions	
4.1 Heat	153
4.2 Cold	162
4.3 Altitude	168
4.4 Air pollution	175

Part 5	The process and implementation of physical training	
5.1	Strength and power	181
5.2	Coordination and balance	194
5.3	Flexibility	212
5.4	Speed and acceleration	218
Part 6	Anthropometry	
6.1	Anthropometry applied to sports medicine	233
Part 7	Training children and adolescents	
7.1	Adaptability of the musculoskeletal, cardiovascular and respiratory systems	269
7.2	The identification of performance potential	275
7.3	Somatic development in children (aged 7 to 18 years)	286
7.4	Age and general development	300
Part 8	Female athletes	
8.1	Training of female athletes	309
Part 9	Sport and physical activities in older people	
9.1	Maintenance of physical fitness	331
9.2	Relation to chronic disease	340
9.3	Osteoporosis in the elderly	355
Part 10	Prevention and management of sports injuries	
10.1	Causes of injuries	363
10.2	Diagnostic principles	391
10.3	Principles of diagnosis and management of traumatic injuries	403
10.4	Diagnosis and management of overuse injuries	446
10.5	Clinical implications of youth participation in sports	469
10.6	Principles of rehabilitation after injuries	489

Part 11	Exercise in the prevention and management of internal disease	
11.1	Cardiovascular disease	505
11.2	Respiratory disease	531
11.3	Metabolic disease	542
Part 12	Medical care of sports teams	
12.1	Relationships between athlete, physician, trainer and coach	563
12.2	Safety and hygiene in sport	566
12.3	Medical examination of athletes	572
12.4	Infectious diseases in tropical climates	583
12.5	Infectious diseases in temperate climates	589
12.6	Nutrition and dietetics	603
12.7	Overtraining and sports psychology	635
12.8	Standardization of medical care during international sports events	646
Part 13	Doping and doping control	
13.1	The doping problem	655
13.2	Clinical aspects of the doping classes	659
13.3	Classes and methods	669
13.4	Dope analysis	676
	<i>Index</i>	681
