

## CONTENTS

Total Energy and Force Calculations with the LMTO Method . . . . .	1
O.K. Anderson, M. Methfessel, C. O. Rodriguez, P. Blochl, and H. M. Polatoglou	
Concentration Dependent Effective Cluster Interactions in Substitutional Alloys . . . . .	15
A. Gonis, P.E.A. Turchi, X.-G. Zhang, G.M. Stocks, D.M. Nicholson, and W. H. Butler	
Simulation of Isovalent Impurities in Magnesium Oxide Using Hartree-Fock Clusters . . . . .	29
J. Zuo, R. Pandey, and A.B. Kunz	
Defect Abundances and Diffusion Mechanics in Diamond, SiC, Si and Ge. . . . .	33
J. Bernholc, A. Antonelli, C. Wang, R.F. Davis, and S.T. Pantelides	
A Computational Metallurgical Approach to the Electronic Properties and Structural Stability of Intermetallic Compounds. . . . .	41
A. J. Freeman, T. Hong, and J.-H. Xu	
Theory of Defects in Solids and their Interactions . . . . .	55
A.B. Kunz	
The Atomistic Structure of Silicon Clusters and Crystals: From the Finite to the Infinite . . . . .	67
J.R. Chelikowsky	
Applications of Simulated Annealing in Electronic Structure Studies of Metallic Clusters. . . . .	79
M.R. Pederson, M. J. Mehl, B. M. Klein, and J. G. Harrison	
Ab-Initio Molecular Dynamics Simulation of Alkali-Metal Microclusters . . . . .	87
W. Andreoni, P. Ballone, R. Carr, and M. Parrinello	
A Simplified First Principles Tight-binding Method for Molecular Dynamics Simulations and Other Applications . . . . .	95
O.F. Sankey and D. Niklewski	
Angular Forces in Transition Metals and Diamond Structure Semiconductors. . . . .	103
A.E. Carlsson	
Pseudopotential Studies of Structural Properties for Transition Metals. . . . .	115
E.J. Mele, M. H. Kang, and I. Morrison	
Calculation of Ground- and Excited-State Properties of Solids, Surfaces and Interfaces: Beyond Density Functional Formalism. . . . .	125
S.G. Louie	

Molecular Dynamics Simulation of the Physics of Thin Film Growth on Si: Effects of the Properties of Interatomic Potential Models. . . . .	139
W.L. Morgan	
Self-Consistent Cluster-Lattice Simulation of Impurities in Ionic Crystals. . . . .	147
J. Meng and A.B. Kunz	
The Effective Medium Approach to the Energetics of Metallic Compounds. . . . .	153
A. Redfield and A. Zangwill	
Ab-Initio Study of Amorphous and Liquid Carbon. . . . .	159
G. Galli, R.M. Martin, R. Carr, M. Parrinello	
Modelling of Inorganic Crystals and Glasses Using Many-Body Potentials. . . . .	167
C.R.A. Catlow, R. A. Jackson, B. Vessal	
Embedded Atom Method: Many-Atom Description of Metallic Cohesion. . . . .	181
M.S. Daw	
Application of Many-Body Potentials Noble Metal Alloys. . . . .	193
G.J. Ackland and V. Vitek	
Many-Body Potentials for Hexagonal Close-Packed Metals. . . . .	203
M. Igarashi, M. Khantha, and V. Vitek	
Derivation of Embedding Functions to Reproduce Elastic and Vibrational Qualities of FCC and BCC Metals. . . . .	211
J.M. Eridon	
An Embedded Atom Potential for BCC Iron. . . . .	219
R.J. Harrison, A.F. Voter, and S.P. Chen	
Effects of Boron and Sulfur on Ni <sub>3</sub> Al Grain Boundaries. . . . .	223
A.F. Voter, S.P. Chen, R.C. Albers, A.M. Boring, and P.J. Hay	
Embedded Atom Method Model for Close-Packed Metals. . . . .	233
D.J. Oh and R.A. Johnson	
Boundary Conditions for Quantum Clusters Embedded in Classical Ionic Crystals. . . . .	239
J.M. Vail	
Physical Properties of Grain-Boundary Materials: Comparison of EAM and Central-Force Potentials. . . . .	245
D. Wolf, J.F. Lutsko, and M. Kluge	
Temperature Dependence of Interatomic Forces. . . . .	265
A.P. Sutton	
New, Simple Approach to Defect Energies in Solids via Equivalent Crystals. . . . .	279
J.R. Smith, T. M. Perry, and A. Banerjee	
Grain-Boundary and Free-Surface Induced Thermodynamic Melting: A Molecular Dynamics Study in Silicon. . . . .	295
S.R. Phillpot, J.F. Lutsko, D. Wolf, and S. Yip	
Interatomic Potentials and the Bonding Energetics of Polytetrahedral Packing in Transition Metals. . . . .	303
R.B. Phillips and A.E. Carlsson	

Transferability of Tight-Binding Matrix Elements. . . . .	309
D.J. Chadi	
The Tight-Binding Bond Model. . . . .	317
D.G. Pettifor, A. J. Skinner and R. A. Davies	
Interatomic Forces and Bond Energies in the Tight-Binding Approximation. . . . .	327
A.T. Paxton	
A New Interatomic Potential for Non-Metals. . . . .	347
M. Heggie	
Transferable Tight-Binding Models Direct from Density Functional Theory. . . . .	353
W.M.C. Foulkes	
Stability of the (110) Face in Noble Metals Analyzed within a Tight-Binding Scheme . . .	361
B. Legrand and M. Guillope	
Application of the Tight-Binding Bond Model. . . . .	369
M.W. Finnis	
Interatomic Forces from the Recursion Method with Gaussian Pseudopotentials. . . . .	381
R. Haydock	
Application of Tight-Binding Recursion Methods to Lattice Defects in Metals and Alloys.	389
K. Masuda-Jindo, K. Kimura, and S. Takeuchi	
Atomic Simulation of Superdislocation Dissociation in Ni <sub>3</sub> Al. . . . .	401
M.H. Yoo, M.S. Daw, and M.I. Baskes	
A New Method for Coupled Elastic-Atomistic Modelling. . . . .	411
S. Kohlhoff and S. Schmauder	
Self-Diffusion and Impurity Diffusion of FCC Metals Using the Embedded Atom Method. . . . .	419
J.B. Adams, S. M. Foiles, and W.G. Wolfer	
Simulations of Atomic and Molecular Processes at Solid Surfaces. . . . .	425
M. Menon and R.E. Allen	
Molecular Dynamics Simulations of Materials: Beyond Pair Interactions. . . . .	443
U. Landman and W. D. Luedtke	
On some Spectacular Surface Segregation Behaviors in CuNi and PtNi Alloys Analyzed within the Tight-Binding Model. . . . .	461
B. Legrand, G. Treglia, and F. Ducastelle	
Index . . . . .	467
