<i>Preface</i>	v
--------------------------	---

Keynote Speaker

Toughening of quasi-brittle materials due to fiber reinforcing <i>S. P. Shah</i>	1
---	---

Invited Lecture

Recent advances in failure localization and nonlocal models <i>Z. P. Bažant</i>	12
--	----

Experimental Measurements

Internal crack detection in single edge notched concrete plates subjected to uniform boundary displacement <i>J. G. M. van Mier</i>	33
Observation of tensile fracture by laser interferometry <i>A. K. Maji, D. Leeman and J. Wang</i>	43
Microprocess failure zone studies using an in situ scanning electron microscope double torsion test facility <i>R. B. Tait, S. Diamond, S. A. S. Akers and S. Mindess</i>	52
Microfracture of cement-based materials in compression <i>D. Darwin, H. Zhao, G. R. Dewey and J. L. Martin</i>	62
In situ studies of a fiber-reinforced polymeric material using drifts <i>H. P. Wang, T. Yu, J.-J. Wang and L. B. Owen</i>	72
Internal deformation measurements with the use of real time X-rays <i>M. L. Wang, H. L. Schreyer and C. A. Rutland</i>	81

Failure Localization and Damage Model

Elementary constitutive relations for quasi-brittle materials based on continuum damage mechanics	95
<i>H. L. Schreyer and M. L. Wang</i>	
On two-dimensional micromechanical damage models for brittle solids with interacting microcracks	105
<i>J. W. Ju</i>	
Localization of deformation in brittle rock: theoretical and laboratory investigations	115
<i>W. R. Wawersik, J. W. Rudnicki, W. A. Olsson, D. J. Holcomb and K. T. Chau</i>	
Non-local continuum and micromechanics of damage in quasi-brittle materials	125
<i>Y. Berthaud and G. Pijaudier-Cabot</i>	
Failure-controlled solution strategies for damage softening with localization	135
<i>Z. Chen and H. L. Schreyer</i>	

Fracture Mechanics

Analysis of the fracture process zone of a propagating concrete crack using moiré interferometry	146
<i>J. Du, J. H. Yon, N. M. Hawkins, K. Arakawa and A. S. Kobayashi</i>	
A visco-elastic fictitious crack model	156
<i>E. A. Hansen</i>	
Mixed mode fracture at early ages	166
<i>W. Wong and R. A. Miller</i>	
Two-dimensional finite element modeling of crack growth in concrete using three-dimensional damage data	176
<i>Z.-G. Liu, S. E. Swartz and K. K. Hu</i>	

Micromechanics of Geological Materials

Nonlinear-corrected size independent fracture toughness of geomaterials	188
<i>K. P. Chong, D. S. Preece and K. D. Basham</i>	

Brittle and ductile transition at failure in frictional materials (powder metals)	198
<i>P. V. Lade and A. A. Mazon</i>	
Measurement of the microstructural response of lightly-cemented granular soils under uniaxial strain conditions	206
<i>J. J. Gill, C. Miglionico and M. Andrews</i>	
Surface instabilities in brittle rock	214
<i>E. Papamichos, J. F. Labuz and I. Vardoulakis</i>	
A micromechanical foundation of plastic behavior of granular materials	224
<i>K. C. Valanis and J. J. Gill</i>	

Micromechanics of Composites

Evaluation of fracture processes in granite based on the tension- softening model	233
<i>T. Hashida</i>	
Size effect in fracture of steel fiber reinforced concrete	244
<i>J.-C. Chern and K.-M. Tarng</i>	
Micromechanics of steel fiber–cementitious matrix bond	254
<i>N. Banthia</i>	
Microcrack propagation and softening behavior of concrete materials	265
<i>W.-F. Chen and E. Yamaguchi</i>	
Dilatancy effects of mode II and mode III shear strength of quasi-brittle materials	275
<i>M. P. Luong</i>	
Simulation of progressive failure in particle composites	285
<i>T. Stankowski, K. Runesson, S. Sture and K. J. Willam</i>	
Some stereological notions of mesoscopic structural concepts underlying mechanical behavior of fibrous, particulate cementitious systems	295
<i>P. Stroeven</i>	

Ceramics, Ice

Micromechanics of materials brittle at ambient temperature	305
<i>D. L. Davidson</i>	
Tensile strength of discontinuous fiber-reinforced composites	315
<i>Y. Termonia</i>	
Determination of internal strains in high-temperature superconductor composites by neutron diffraction	323
<i>J. P. Singh, D. S. Kupperman, S. Majumdar, R. L. Hitterman and D. W. Schroeder</i>	
Notch acuity effects on the CTOD and K_{Ic} of ice	333
<i>J. P. Dempsey, Y. Wei and S. J. DeFranco</i>	

Dynamic Study I: Response

Dynamic testing of laterally confined concrete	343
<i>L. E. Malvern, D. A. Jenkins, T. Tang and S. McClure</i>	
Experimental and numerical analysis of high strain-rate concrete tensile tests	353
<i>C. A. Ross, S. T. Kuennen and J. W. Tedesco</i>	
SEM dynamic microscopy	365
<i>B. H. Fishbine, R. J. Macy, T. J. Ross and M. L. Wang</i>	
The effect of strain rate on the compressive strength of dry and saturated tuffi.	375
<i>W. A. Olsson</i>	
New experimental techniques to study damage evolution in brittle materials	385
<i>N. S. Brar, S. J. Bless and Z. Rosenberg</i>	

Interface Mechanics

Micro-mechanical modeling of crack growth resistance in a carbon/carbon composite	395
<i>M. G. Jenkins, A. Ghosh and A. Okura</i>	
Does bond-slip exist?	407
<i>W. H. Gerstle and A. R. Ingraffea</i>	

Prestress transfer length predicted by cohesive crack model	417
<i>R. Weerasekera and R. E. Loov</i>	
Modeling of bond in fiber-reinforced concrete by a force transfer mechanism	427
<i>G. G. Namur and A. E. Naaman</i>	
Fracture analysis for curved cracks on the juncture-surface between aggregate and cement-mortar	444
<i>R.-Z. Zhou and G.-T. Liu</i>	
Two fracture mechanical models and their mutual relations . . .	453
<i>N. A. Harder</i>	
Development of a core-based testing method for determining fracture energy and tension-softening relation of concrete . . .	463
<i>S. Teramura, N. Nomura, T. Hashida, H. Takahashi and H. Mihashi</i>	
Subcritical crack growth in concrete and the use of the FCM . . .	474
<i>T.-J. Jin</i>	
A micromechanics based rough crack model	482
<i>M. P. Divakar and A. Fafitis</i>	

Dynamic Study II: Energy Release Mechanisms

Mechanisms of fracture and fragmentation by explosive loading . .	494
<i>R. D. Dick, W. L. Fourney, X. J. Wang, C. Young and S. Zheng</i>	
Real time TV-holography observations of the fracture process zone .	504
<i>E. A. Hansen</i>	
Effects of high strain rate loading on the microstructure of hydrated cement paste	514
<i>A. P. Ritter, S. R. Winzer, K. Bridger and G. L. Childs</i>	
A numerical study of concrete fracture under impact loading . . .	524
<i>L. J. Sluys and R. de Borst</i>	
Investigation of dynamic energy release mechanisms	536
<i>S. T. Wu</i>	
Fatigue crack growth in reinforced concrete	541
<i>A. Carpinteri</i>	

Micromechanics of Concrete

Chemo-micro-mechanics of cementitious composites	549
<i>D. Krajcinovic, M. Basista and D. Sumarac</i>	
Testing and modelling of plain concrete under mode I loading . . .	559
<i>D. A. Hordijk and H. W. Reinhardt</i>	
Roles of microcracking and bridging in fracture of quasi-brittle materials	569
<i>H. Horii and S. Nirmalendran</i>	
Crack trapping and bridging as toughening mechanisms in high strength concrete	579
<i>V. C. Li and J. Huang</i>	
CDM based constitutive equations for high strength and fiber reinforced concrete	589
<i>H. Stang, M. Tonnesen and E. Byskov</i>	
Damage evaluation of mortars based on acoustic emission	600
<i>C. Ouyang, A. Maji and S. P. Shah</i>	

Late Submissions

An energy criterion for fatigue failure of RC beam	610
<i>Y. Cheng, G. Zhang, B. Hou, J. Li, X. Peng and Z. Xu</i>	
A continuum damage model for the quasi-static response of brittle materials	620
<i>E. P. Chen and D. Y. Tzou</i>	
<i>Index of Contributors</i>	627
