

# CONTENTS

## **Part One** **Fundamentals of Particle Studies** **1**

<b>1</b>	<b>Introduction</b>	<b>3</b>
	General References	7
<b>2</b>	<b>Particle Characteristics, Units and Dimensions, and Terminology</b>	<b>8</b>
	Particle Characteristics	8
	Units and Dimensions	14
	Terminology	17
	References	21
<b>3</b>	<b>Fundamentals of Particle Behavior</b>	<b>22</b>
	Resistance of a Medium to Particle Motion	23
	Diffusion	27
	Coagulation	29
	Optical Effects	30
	Thermal Effects	35
	Electrical Effects	36
	References	38

## **Part Two** **Particle Sampling Instruments** **39**

<b>4</b>	<b>Selection of a Particle Sampling Instrument</b>	<b>41</b>
	Relation of Problem Definition and Sampling Methods	42
<b>5</b>	<b>Inertial Separation Sampling Instruments</b>	<b>52</b>
	Inertial Separation	52
	Impactors	54
	Impactor Operation at Noncalibration Conditions	59
	Particle Losses in Impactors	62
	Virtual Impactors	64
	Centrifugal Particle Separation and Cyclones	65
	References	67
	Specification Sheets	69

<b>6</b>	<b>Filtration</b>	100
	Mechanism of Particle Collection by a Filter	104
	Filter Selection	106
	Filter Media Sources	112
	References	112
	Specification Sheets	114
<b>7</b>	<b>Condensation Nuclei Counters and Diffusion Devices</b>	125
	Condensation Nuclei Counters	125
	Diffusion Devices	128
	References	131
	Specification Sheets	132
<b>8</b>	<b>Sampling Instruments Utilizing Particle Electric Mobility</b>	144
	Electric Mobility and Particle Velocity	144
	Electrostatic Precipitators	145
	Electric Mobility Classifiers	147
	References	151
	Specification Sheets	152
<b>9</b>	<b>Optical Particle Samplers</b>	158
	Nephelometers	159
	Optical Particle Counters	159
	Optical Particle Spectrometers	161
	References	163
	Specification Sheets	164
<b>10</b>	<b>Miscellaneous Sampling Methods</b>	182
	Thermal Precipitators	182
	Impingers	183
	$\beta$ -Attenuation Particle Samplers	184
	Tape Samplers	185
	Coulter Counter	186
	References	186
	Specification Sheets	187
<b>11</b>	<b>Sampling Considerations and Instrument Calibration</b>	192
	Location of Sampling Instrument	193
	Gas Velocity Measurement	196
	Isokinetic Sampling	198
	Flow Calibration	201
	Flow Measurement Devices	204
	Calibration of Flow Measuring Devices	207
	Calibration of Particle Size and Concentration	209
	References	217
	Specification Sheets	219

## Part Three

### Methods of Particle Analysis 237

<b>12</b>	<b>Selection of Analysis Methods and General Laboratory Procedures</b>	239
	Selection of an Analysis Method	239
	General Laboratory Considerations	241
	General References	244
<b>13</b>	<b>Particle Size Distributions</b>	245
	Differential and Cumulative Size Distributions	246
	Moments of the Size Distribution	247
	Distributions with Respect to the Logarithm of Particle Size	248
	Mean and Median Particle Size	250
	Lognormal Size Distribution	251
	General Size Distributions	257
	Computer Treatment of the Size Distribution	258
	References	259
<b>14</b>	<b>Size Distribution Analysis</b>	260
	Data Analysis	261
	Computer Calculation of the Size Distribution	269
	References	270
<b>15</b>	<b>Optical Microscopy</b>	271
	Instrumentation	271
	Sample Preparation	273
	Particle Identification	274
	Single-Particle Handling	275
	Particle Counting	276
	Analysis for Size Distributions	277
	References	278
<b>16</b>	<b>Atomic Absorption Spectrometry</b>	280
	Principles	281
	Instrumentation	282
	Interferences	283
	Calibration Standards	285
	Standard Addition	285
	Sample Preparation	286
	References	291
<b>17</b>	<b>x-Ray Fluorescence Analysis</b>	292
	Principles of x-Ray Fluorescence Analysis	292
	Instrumentation	293
	Sample Substrates	296
	Calibration Standards	297

<b>xiv</b>	<b>CONTENTS</b>	
	Correction of x-Ray Intensities	299
	Example of Wavelength Dispersive x-Ray Analysis	303
	References	308
<b>18</b>	<b>Electron Microscopy</b>	310
	Principles of Electron Microscopy	312
	Instrument Design	314
	Sample Preparation	319
	Particle Analysis	322
	References	329
<b>19</b>	<b>Activation Analysis</b>	330
	Principles of Activation Analysis	331
	Instrumentation and Detection	333
	Sample and Standard Preparation	335
	Sample Irradiation	336
	Analysis, Corrections, and Interferences	336
	Particle and $\gamma$ -Ray-Induced Activation Analysis	339
	Detection Limits and Precision	340
	References	340
<b>20</b>	<b>Chromatography</b>	341
	Principles of Chromatographic Analysis	342
	Chromatographic Columns	343
	Detectors	344
	Mass Spectrometry	345
	Sample Preparation	347
	Analysis	348
	References	348
	<b>Subject Index</b>	351
