## Part I: Microgravity Materials Sciences

1. <i>Introduction.</i> By B. Feuerbacher.....	3
1.1 The Space Utilization.....	5
1.2 The Scientific Basis.....	7
1.3 Present State and Future Developments.....	9
2. <i>Historical Development.</i> By R.J. Naumann.....	11
2.1 Motivation for Microgravity Experiments.....	11
2.2 First Experiments.....	13
2.2.1 Drop Tower and Aircraft Experiments.....	13
2.2.2 Apollo Experiments.....	13
2.3 Skylab and Apollo-Soyus Test Project Experiments.....	16
2.3.1 Crystal Growth Experiments.....	21
2.3.2 Metallurgical Experiments.....	21
2.3.3 Electrophoresis Experiments.....	23
2.3.4 Skylab and Apollo-Soyus Experiments in Perspective.....	24
2.4 SPAR Experiments.....	25
2.5 Creation of the Science Base.....	27
3. <i>Simulation of Weightlessness.</i> By H. Hamacher.....	31
3.1 Free Fall: The Principle to Simulate Weightlessness.....	31
3.2 Free Fall Trajectories.....	33
3.3 The Orbital Flight.....	34
3.3.1 Atmospheric Drag.....	36
3.3.2 Solar Radiation Pressure.....	39
3.3.3 The Extended Spacecraft.....	40
3.3.4 G-jitter.....	44
3.4 Other Free-Fall Methods.....	47
3.4.1 Sounding Rockets.....	47
3.4.2 Research Aircrafts.....	48
3.4.3 Drop Tubes and Drop Towers.....	49

<b>Part II: Physical Phenomena</b>	<b>53</b>
4. <i>Convection and Bulk Transport.</i> By R.A. Brown.....	55
4.1 Bulk Fluid Flow.....	55
4.2 Scalings for Flow and Species Transport.....	59
4.3 Transport Phenomena in Directional Solidification.....	70
4.4 Transport Phenomena in the Floating Zone.....	78
4.5 Drop Dynamics.....	80
4.6 Summary and Perspective.....	84
5. <i>Diffusion and Atomic Transport.</i> By G. Frohberg.....	93
5.1 Thermodynamics of Irreversible Processes.....	95
5.1.1 Phenomenological Equations.....	95
5.1.2 Diffusion.....	96
5.1.3 Transport Effects.....	97
5.1.4 Influence of Gravity on Transport.....	100
5.2 Diffusion and Transport in Simple Systems.....	101
5.2.1 Reference System.....	101
5.2.2 Simple Solutions of the Continuity Equation.....	104
5.2.3 The Boltzmann-Matano Method.....	106
5.2.4 Experimental Methods and Problems.....	107
5.3 Theories of Diffusion Processes in Liquids.....	116
5.3.1 Diffusion and Viscosity.....	116
5.3.2 Quasicrystalline Models.....	117
5.3.3 Model of Critical Volume.....	117
5.3.4 Fluctuation Theory.....	117
5.3.5 New Concepts and the Dynamic Structure of Liquid.....	118
5.3.6 Theories of Transport Processes in Liquids.....	119
5.3.7 Isotope Effect in Diffusion and Transport.....	120
5.4 Influence of Diffusion on Related Experiments.....	121
5.4.1 Solidification and Eutectic Alloys.....	121
5.4.2 Ostwald-Ripening.....	124
5.4.3 Separation of Immiscible Liquids.....	124
5.4.4 Crystallization.....	125
5.5 Conclusions.....	125

6. <i>Capillarity and Wetting.</i> By J.M. Haynes.....	129
6.1 Surfaces.....	130
6.1.1 The Gibbs Model.....	130
6.1.2 Determination of Surface Tension.....	133
6.1.3 Surface Tension and Other Properties.....	134
6.2 Surface Tension of Solutions.....	137
6.3 Surface Tension of Solids.....	138
6.4 Wetting and Spreading.....	139
6.4.1 Contact Angles: Measurement and Character.....	140
6.5 Capillarity.....	142
6.5.1 Hydrostatic Equilibrium.....	142
6.5.2 Diffusional Equilibrium.....	144
6.5.3 Capillary Stability.....	145
6.6 Practical Conclusions.....	146
7. <i>Solidification.</i> By P.R. Sahn and J.C. Sturm.....	149
7.1 Objectives for Solidification Research Under Microgravity.....	150
7.2 Solidification Front Dynamics.....	151
7.3 Complex Interactions of Different Transport Processes.....	155
7.4 Gravity-Independent Convective Processes.....	157
7.5 Effect of Convection on Microstructure and Properties.....	159
7.6 Towards Novel Materials and Technologies.....	166
8. <i>Nucleation and Undercooling.</i> By D.M. Herlach and B. Feuerbacher....	168
8.1 Nucleation Theory.....	169
8.1.1 Clusters and Nuclei.....	169
8.1.2 Homogeneous and Heterogeneous Nucleation.....	173
8.1.3 The Nucleation Rate.....	174
8.2 Nonequilibrium Solidification.....	176
8.2.1 Undercooling and Hypercooling.....	176
8.2.2 Thermodynamic Conditions.....	177
8.2.3 Influence of Solidification Kinetics.....	178
8.2.4 Microstructure Refinement.....	180
8.3 Experimental Approaches.....	182
8.3.1 Rapid Cooling.....	183
8.3.2 Amorphous Containment.....	184

8.3.3	Dispersion Techniques.....	184
8.3.4	Containerless Undercooling.....	185
8.4	Microgravity Prospects.....	187
9.	<i>Critical Phenomena.</i> By D. Beysens.....	191
9.1	Universality of the Critical Behavior. Scaling Laws.....	192
9.1.1	Broken Symmetry - Order Parameter.....	192
9.1.2	The Landau Free Energy.....	194
9.1.3	Scaling Laws. The Renormalization Group Approach.....	196
9.1.4	Critical Fluid Dynamics.....	201
9.2	Non Equilibrium Phenomena.....	203
9.2.1	Fluids Under Shear Flow: Change of Upper Critical Dimensionality.....	204
9.2.2	Phase Separation Process: Nucleation, Spinodal Decomposition.....	204
9.2.3	Ionic Conductivity Measurements.....	207
9.3	Finite Size Effects: Wetting and Prewetting Transitions.....	208
9.3.1	In the 2-Phases Region: Wetting.....	209
9.3.2	In the 1-Phase Region: Prewetting.....	210
9.3.3	Near the Critical Point: The Critical Adsorption.....	210
9.4	Gravity Dependence.....	210
9.4.1	The Liquid-Vapor Transition.....	210
9.4.2	The Phase Separation Process.....	212
9.4.3	Wetting Layers.....	212
9.4.4	The $\lambda$ -Point of Helium.....	212
9.5	Experiments Under Microgravity Conditions.....	213
9.5.1	Microgravity to Obtain a Bulk Critical Cell at the Gas-Liquid Critical Point.....	213
9.5.2	Microgravity to Avoid Stratification.....	217
9.6	General Conclusion.....	222

### Part III: Experimental Hardware

225

10.	<i>Furnaces.</i> By W. Steinborn.....	227
10.1	Special Requirements to Furnaces in Space Laboratories.....	228

10.2	Review of Heating Techniques and Their Potential for Space Furnaces.....	231
a.	Resistance Heating.....	231
b.	Electron Beam Heating.....	233
c.	Inductive Heating.....	233
d.	Electrical Discharge Heating.....	234
e.	Heat Pipe Heating.....	234
f.	Mirror Heating.....	236
g.	Direct Current Passage Heating.....	240
h.	Laser Heating.....	240
i.	Microwave Heating.....	241
k.	Chemical Reaction Heating.....	241
10.3	Practical Spaceborn Furnace Configurations and Their Characteristics.....	241
a.	Isothermal Heating Furnaces.....	242
b.	Gradient Furnaces.....	249
c.	Zone Heating Furnaces.....	253
d.	Universal Furnaces.....	255
10.4	Peripheral Devices.....	256
10.5	Future Trends in Space Furnace Development.....	259
11.	<i>Fluid Experiments.</i> By A. Gonfalone.....	266
11.1	Introduction.....	266
11.2	Particular Characteristics of Fluid Instrumentation.....	267
11.3	The Spacelab Facilities.....	273
11.4	Concluding Remarks.....	289
12.	<i>Containerless Processing Technology.</i> By R.J. Naumann and D.D. Elleman.....	294
12.1	Drop Facilities.....	295
12.1.1	The MSFC Drop Tubes.....	295
12.1.2	The JPL Drag-Free Drop Facility.....	299
12.2	Acoustical Levitators.....	300
12.2.1	Single-Axis Tuned Cavity Acoustic Levitator Furnace.....	300
12.2.2	Three-Axis Levitator.....	301
12.2.3	Single-Axis Interference Levitator.....	302

12.3 Aerodynamic Levitators.....	306
12.4 Electromagnetic Levitators.....	307
12.5 Electrostatic Levitation.....	309
12.6 Prospectus for Containerless Processing.....	310
<b>Part IV: Case Studies and Results</b>	<b>315</b>
13. <i>Metals and Composites.</i> By J.J. Favier.....	317
13.1 Metallurgical Technologies.....	318
13.2 Test of Theories.....	321
13.2.1 Eutectic Growth.....	321
13.2.2 Directional Solidification.....	327
13.3 Elaboration of New or Improved Materials.....	331
13.3.1 Particle Redistribution.....	332
13.3.2 Systems of Interest.....	334
13.3.3 Skin Technology.....	336
13.4 Characteristic Future Experiments.....	337
13.4.1 The "GETS" Experiment.....	337
13.4.2 The Mephisto Project.....	337
13.5 Conclusions.....	340
14. <i>Binary Systems with Miscibility Gap in the Liquid State.</i> By H.U. Walter.....	343
14.1 Binary Systems with Miscibility Gap in the Liquid State.....	347
14.2 Minimum Free Energy Configurations.....	351
14.3.1 Simulation of Spinodal Decomposition and Growth of Nuclei.....	354
14.3.2 Nucleation.....	354
14.3.3 Terrestrial Observation of the Early Stages of Spinodal Decomposition and Nucleation.....	357
14.4 Results of Microgravity Investigations.....	364
14.5 Conclusions.....	374

15. <i>Crystal Growth.</i>	By D.T.J. Hurle.....	379
15.1	Introduction.....	379
15.2	Space Relevant Growth Techniques.....	380
15.2.1	Floating Zone Melting.....	380
15.2.2	Bridgman Growth.....	383
15.2.3	Growth from Metal Solution by the Travelling Heater Method (THM).....	387
15.2.4	Growth from Aqueous Solution.....	390
15.2.5	Vapour Growth.....	393
15.3	Discussion.....	394
15.4	Future Potential.....	395
15.5	Conclusions.....	398
16. <i>Fluid Dynamics.</i>	By D. Langbein.....	401
16.1	Capillarity.....	401
16.2	Stability.....	404
16.3	Microgravity Experiments on Liquid Bridges and Drops.....	408
16.4	Dynamic Models.....	409
16.5	Wetting and Spreading.....	413
16.6	Interface Convection.....	416
16.7	Microgravity Experiments on Interface Convection.....	419
17. <i>Thermophysical Properties.</i>	By G. Froberg.....	425
17.1	Overview on Properties with Gravity Influence.....	425
17.2	Design of Experiments for Reduced Gravity (Diffusion and Atomic Transport).....	429
17.2.1	Container Design.....	429
17.2.2	Temperature Control.....	433
17.2.3	Analysis of Diffusion Components.....	435
17.3	Diffusion Experiments in Space.....	436
17.3.1	Selfdiffusion in Zn (Skylab).....	436
17.3.2	Solute Diffusion of Au in Pb (Apollo-Soyuz).....	437
17.3.3	Selfdiffusion in Sn (Spacelab-1).....	438
17.3.4	Self- and Interdiffusion in Sn/In (D1 Flight).....	441
17.3.5	Interdiffusion in Pb/Zn (D1 Flight).....	441
17.3.6	Interdiffusion in Salt Melts (D1 Flight).....	442

17.4	Transport Experiments in Space.....	442
17.4.1	Thermotransport of Co in Sn (Spacelab-1 and D1).....	442
17.4.2	Thermotransport in AgI/KI (D1 Flight).....	444
17.5	Summary and Outlook.....	444
18.	<i>Glasses.</i> By R.H. Doremus.....	447
18.1	Uses and Types of Glass.....	447
18.2	Melting of Glass.....	449
18.3	Glass Formation and Crystallization.....	451
18.4	Diffusion.....	454
18.5	Bubbles.....	456
18.6	Processing of Glass in Low Gravity.....	458
18.7	Measurement of Properties of Glass in Low Gravity.....	460
18.8	Summary.....	461
19.	<i>Separation Techniques.</i> By R.S. Snyder.....	465
19.1	Electrophoresis.....	466
19.2	Continuous Flow Electrophoresis on Earth.....	468
19.3	Continuous Flow Electrophoresis in Space.....	470
19.4	Isoelectric Focusing.....	473
19.5	Phase Partitioning.....	477
19.6	Conclusions.....	479
	Index.....	483
