Part I Foundations of Thermodynamics

1. An Outline of Thermodynamical Structure

By J. Serrin	3
1.1 Introduction	3
1.2 Classical Thermal Structure	4
1.3 The Formal Structure of Thermodynamics	6
1.4 The First Law	10
1.5 The Second Law	14
1.6 State Structure and Potentials	19
1.7 Reversible Processes	22
1.8 Special Systems	24
1.9 Concluding Remarks	30
References	31

2. Foundations of Continuum Thermodynamics

By M. Šilhavý	33
2.1 Introduction	33
2.2 Work, Heat, and Empirical Temperature	35
2.3 The First Law of Thermodynamics	41
2.4 The Second Law of Thermodynamics	43
References	47

3. Foundations of the Clausius-Duhem Inequality

By M. Feinberg and R. Lavine	49
3.1 Introduction	49
3.2 Thermodynamical Theories	52
3.3 The Existence of Specific Entropy Functions and Thermodynamic Temperature Scales	57
3.4 Properties of the Set of Clausius-Duhem Temperatures Scales	59
3.5 Properties of the Set of Specific Entropy Functions	62
3.6 Concluding Remark	64
References	64

4. Recent Research on the Foundations of Thermodynamics

By B. D. Coleman and D. R. Owen	65
References	76

5. A Third Line of Argument in Thermodynamics	
By C. Truesdell	79
List of Sources	83
6. The Laws of Thermodynamics for Non-Cyclic Processes	
By M. Ricou	85
6.1 Basic Definitions	86
6.2 The First Law and Energy	88
6.3 The Second Law and Entropy	92
6.4 Deterministic State Structures	95
References	97

Part II The Thermodynamics of Gibbs and Carathéodory

7. What Did Gibbs and Carathéodory Leave Us About Thermodynamics?	
By C. Truesdell	101
Apology	101
7.1 The Words	101
7.2 Statics and Dynamics: the Catenary	103
7.3 The Thermostatistics of Gibbs	104
7.4 Gibbs on Thermodynamics	106
7.5 The Thermodynamics of Planck	109
7.6 Gibbs's Rational Foundations of Thermodynamics: Gibbsian Statistical Mechanics	111
7.7 Bryan's Rational Thermodynamics	113
7.8 Carathéodory's Axioms	114
7.9 Carathéodory's Legacy	122
7.10 Colophon	123
8. Structure and Dynamical Stability of Gibbsian States	
By R. L. Fosdick	125
8.1 Introduction	125
8.2 Preliminaries and Motivation	127
8.3 Gibbsian States: Necessary Conditions and Comparison Principles	132
8.4 Gibbsian States: Sufficient Conditions and Structure	137
8.5 Equivalent Problems of Thermostatistics	141
8.6 Dynamical Stability	148
References	154
9. Genericity and Gibbs's Conjecture on the Maximum Number of Coexistent Phases	
By C.-S. Man	157
9.1 Gibbs's Conjecture and the First Phase Rule	157
9.2 Counterexamples	158
9.3 Naive Reformulation of the Gibbs Conjecture for Substances	159
9.4 The Set of Gibbs Surfaces G	160

9.5 Strong and Weak Topologies on G	162
9.6 The Criterion	164
9.7 The Rule-Abiding Gibbs Surfaces. Denseness	164
9.8 Difficulty and Refinement of the Naive Reformulation	165
9.9 The Remaining Paradox	167
References	168

Part III Special Material Systems

10. Thermodynamics and the Constitutive Relations for Second Sound in Crystals	
By B. D. Coleman, M. Fabrizio, and D. R. Owen	171
Summary	171
10.1 Introduction	171
10.2 Derivation of Thermodynamical Relations	174
References	184
11. Interstitial Working and a Nonclassical Continuum Thermodynamics	
By J. E. Dunn	187
11.1 Introduction	187
11.2 Classical Continuum Thermodynamics: A Limitation	189
11.3 A Nonclassical Continuum Thermodynamics: Interstitial Work Flux	193
11.4 Forms and Effects of the Interstitial Work Flux	198
11.5 Materials of Korteweg Type	206
11.6 An Application: Rules Like Maxwell's	217
References	221
12. Phase Transformations and Non-Elliptic Free Energy Functions	
By R. D. James	223
12.1 Introduction	223
12.2 Kinematics of Co-Existence	224
12.3 Non-Elliptic Free Energy Functions for Materials Which Change Phase	230
12.4 Significance of Points of Convexity of the Free Energy	233
12.5 Geometry of the Domain of the Free Energy	234
12.6 Special Analysis for the Case of a Cubic Parent Phase	236
References	238
13. Dynamic Changes of Phase in a van der Waals Fluid	
By R. Hagan and J. Serrin	241
13.1 Introduction	241
13.2 Basic Equations	242
13.3 The Hugoniot Curve	246
13.4 Existence of Compressive Shock Layers	251
References	260
