

Contents

Introduction	1
1. Anatomy of the Milky Way	6
Cosmic Yardsticks	8
Herr Meyer Solves a Riddle	11
Approaching the Milky Way	13
In the Virgo Cluster.	15
The Stars of the Milky Way Make Their Appearance	17
Inside the Milky Way	19
The Centre of the Milky Way	21
2. Light	25
Waves in Empty Space	25
Herr Meyer Dreams About the Electromagnetic Spectrum	28
The Spectrum	30
How the Spectral Lines Are Formed	33
Hydrogen as a Radio Transmitter.	35
Thermal Radiation	37
Spectra from the Depths of Space.	39
A Millionth of a Gramme of Light	40
Radiation into Matter; Matter into Radiation	42
Energy in Light and Matter	44
3. Speeding Up the Milky Way	46
Novae and Supernovae	47
The Rotating Disk	48
Two Populations	50
Motion Revealed by Light and Radio Waves	53
Herr Meyer and His Bicycle	53
The Doppler Effect	54
The Pattern of Movement Within the Milky Way	56
4. Plumbing the Depths of the Milky Way	61
Stellar Proper Motions	63
Radial Velocities	65
Star Streams	67
The Hyades Cluster	67

Beyond the Hyades Farther Out into Space	69
Pulsating Stars and the Cosmic Distance Scale	70
How Far Away Are the Globular Clusters?	72
Harlow Shapley Ousts Us from the Galactic Centre	74
The Hyades Stars Determine the Size of the Universe	77
5. The Island Universe Debate	79
The Problem of the Nebulae	79
Stars Erupt in the Nebulae	83
“Secondary Nuclei” Within the Andromeda Nebula	84
The 26th of April 1920	87
Walter Baade Increases the Distance of the Andromeda Nebula	90
6. The Universe Is Expanding	93
The High Velocities of the Spiral Nebulae	94
Are We in the Centre of the Universe?.	100
Expansion and Olbers’ Paradox	100
When Did It Begin?.	103
Galaxies That Are Approaching	107
Doubts About the Expansion	109
What Lies Farther Out?	110
7. The Big Bang in Flatland	112
Herr Meyer’s Dream of Flatland	112
The World of the Flatmen	113
A Two-Dimensional World’s Astronomy	116
Geometry in Flatland	118
True Curved Surfaces	124
Is Our Three-Dimensional Space Curved?	128
Ghosts from the Fourth Dimension	129
8. Expansion and Gravity	131
It Is the Same Everywhere in the Universe as It Is Here	131
Which Curved Universe Do We Inhabit?.	133
The Expansion Slows Down	137
Expanding Flat Universes	138
From Flatland to Our Universe.	140
Gravitational Repulsion?	145
Which Came First, the Chicken or the Egg?	148
The Russian Balloonist and Einstein’s Mistakes.	149
The Theory of the Steady-State Universe.	151
9. The Realm of the Nebulae	154
Galaxies Rotate	155

The Invisible Material	159
The Zoo of Galaxies	160
Galactic Nuclei	164
Seyfert Galaxies	165
Clusters of Galaxies	167
Cannibalism Among Galaxies	169
Clusters of Clusters	171
10. The Radio Sky	173
The Birth of Radio Astronomy	173
Radio Waves from the Milky Way	176
The Story of Cygnus A.	180
Radio Galaxies	184
The Twin Exhaust Model.	187
“Tadpole” Galaxies and Aperture Synthesis	191
11. The Mysterious Quasars	194
The Classification of Radio Sources	195
Stars That Are Utterly Unlike Anything Ever Seen Before	196
The Recession Velocities of Radio Stars	199
Are Quasars Really Distant?	201
Black Holes in Quasars?	202
The Absorption Lines in Quasars	207
The Problem of Superluminal Velocities.	209
Herr Meyer and the Firework Display	211
A Counter-Example	213
Are There Quasars in the Centres of Galaxies?	214
The Double Quasar	215
12. . . . and There Was Light	217
Radio Emission from Our Bodies	218
Searching for Faint Radiation from the Milky Way	220
The Radiation Remaining from the Big Bang	221
Cold Radiation from the Hot Big Bang.	223
Our Slipstream in Space	224
The Cosmic Mixture of Matter and Radiation.	225
Cosmic Material in the Laboratory	226
When Radiation and Matter Separated	228
Radiation Becomes Dominant.	229
Where Is the Antimatter?	230
The First Chemical Elements	231
Are Neutrinos Sufficient to Close the Universe?	233
Our Universe’s Luminous Boundary	235
Olbers’ Paradox, for the Last Time	238

13. The Intelligent Universe.	240
Where Did Galaxies and Quasars Come from?	240
Why Is the Universe so Smooth?	242
We Are Here Because the Universe Is Uniform	244
What Came Before?	244
At the Origin of Time	246
When the Universe Was Tossed into Physics.	247
Do Natural Laws Determine the Form of the Universe?	249
A Time-Lapse Film of the Universe	251
Appendices	254
A. Frequency and Wavelength	254
B. How the Distance of the Hyades Is Determined.	255
C. The Space Telescope and Stellar Parallaxes.	256
D. Distances by Dead Reckoning	257
Author and Subject Index.	259
