## Editor's introduction

## Part I Biochemical localization of steroid hormone receptors

1. Cytoplasmic versus nuclear localization of steroid hormone receptors:  
A historical perspective  
(E.V. Jensen)
2. Relationship between nuclear steroid binding and steroid-induced responses  
(N.J. MacLusky)
3. Nuclear components responsible for retention of steroid hormone receptor complexes: Specific acceptor protein-DNA complexes for the avian oviduct progesterone receptor (J. Hora, A. Goldberger, M. Horton and T.C. Spelsberg)
4. Localization of steroid hormone receptors in the nuclear matrix  
(E.R. Barrack)
5. Heterogeneity of nuclear steroid hormone receptors with an emphasis on unfilled receptor sites  
(W.V. Welshons and V.C. Jordan)
6. Membrane-associated steroid hormone receptors  
(M. Haukkamaa)

## Part II Histochemical localization of steroid hormone receptors

7. Histochemical methods for steroid hormone receptor localization  
(J.C.E. Underwood)
8. Autoradiographic localization of steroid hormone receptors  
(P.T. Sheridan and P.M. Martin)
9. Cytochemical localization of steroid hormone receptors: A critique  
(G.C. Chamness)
10. Immunocytochemical localization of steroid hormone receptors: Anti-receptor antibodies  
(J.M. Gasc and E-E. Baulieu)
11. Recent developments in the use of anti-receptor antibodies to study steroid hormone receptors  
(M.F. Press and G.L. Greene)
