Preface (B. Kramer)	3
1. Introduction (H. Grupp)	5
2. Summary of contributions and discussions (H. Grupp, U. Gundrum)	8
2.1 National science systems and science indicator systems	8
2.2 Bibliometric indicators	18
2.3 Patent indicators	25
2.4 Technical indicators	28
2.5 Econometric indicators	30
2.6 Technological case studies	31
3. Conclusions (H. Grupp)	34
4. Contributed papers	36
4.1 Japanese national attitudes with regard to basic research (F. Kodama)	36
4.2 A system approach to science indicators (F. Kodama)	65
4.3 The use of bibliometric data as tools for university research policy (H.F. Moed et al.)	88
4.4 Relationship between R & D expenditure and patent applications (S. Greif)	100
4.5 Technological performance assessments based on patents and patent citations (F. Narin et al.)	107
4.6 An approach to the measurement of technology based on the hedonic price method and related methods (P.P. Saviotti)	120
4.7 The ISI-approach to technometrics: Outline of the conceptual framework and assessment of technological standards (H. Grupp, O. Hohmeyer)	146
4.8 West German competitiveness of technology-intensive products (H. Legler)	171
4.9 The development of genetic engineering in Sweden (R. Stankiewicz)	191

4.10	A bibliometric survey of fibre-optics research in Sweden, West Germany, and Japan (A. Granberg)	207
4.11	State of development and international trends in assembly, handling, and robotics (R.D. Schraft)	242
4.12	Japanese R & D developments in robotics (M. Kondo)	250
4.13	A methodology for the comparative study of basic technology R & D in Germany, Japan, and Sweden (R. Stankiewicz)	296
4.14	Some suggestions regarding the interview work in connection with the three countries project (R. Stankiewicz, H. Grupp)	318
5.	List of speakers and participants	323
