

Table of Contents

1. Introduction	1
2. Conventional Animation	3
2.1 Basic Principles of Conventional Animation	3
2.2 How Are Cartoon Animated Films Made?	4
2.3 Multiplane and Shooting Phase	5
2.4 Some Techniques and Special Camera Effects	6
2.5 Bar, Route, Model and Exposure Sheets.	9
2.6 Postproduction	9
2.7 Historical Background	11
2.8 Applications of Animation.	12
3. Computer Animation	13
3.1 The Role of the Computer in Animation	13
3.2 How to Classify Computer Animation Systems?	13
3.3 Real-time vs. Frame-by-frame.	14
3.4 Frame Buffer Animation and Real-time Playback	15
3.5 Systems vs. Languages	16
4. The Development of Computer Animation in Various Organizations	19
4.1 The Early Systems: BEFLIX and EXPLOR	19
4.2 Picture-driven Animation: GENESYS	20
4.3 Analog Systems: SCANIMATE and CAESAR	21
4.4 ANIMATOR, ARTA and MOP	22
4.5 Computer Animation at the National Research Council of Canada	25
4.6 Computer Animation at Ohio State University	26
4.7 From GRASS to ZGRASS.	33
4.8 New York Institute of Technology and Lucasfilm	34
4.9 MAGI/Synthavision, Robert Abel, Triple I and Digital Effects	36
4.10 And the Others?	38
5. Key Frame and Painting Systems	43
5.1 Computer-assisted Animation	43
5.2 The Input of Drawings	43
5.3 In-between Calculations	45

5.4	The Laws of Animation.	49
5.5	Skeleton Techniques	50
5.6	The Path of Motion and P-curves.	51
5.7	In-betweening Using Moving Point Constraints	54
5.8	Coloring Techniques	56
5.9	Paint Systems	58
5.10	Color Simulation and Dithering.	59
5.11	Gradation Techniques	62
5.12	A Case Study: The Multiple Track Animator System	64
6.	Modeled Animation	69
6.1	What Is Modeled Animation?.	69
6.2	Object Modeling	70
6.3	Object Creation.	74
6.4	Motion Specification	77
7.	Hidden Surfaces, Reflectance and Shading	79
7.1	Hidden Surfaces.	79
7.2	Light Reflection Models	83
7.3	Shading	85
7.4	Structured Shaded Graphical Types	88
7.5	Rendering of Parametric and Patch Surfaces	93
8.	Transparency, Texture, Shadows and Anti-aliasing	97
8.1	Ray-tracing Algorithms	97
8.2	Transparency	100
8.3	Texture.	104
8.4	Fractals	106
8.5	Fuzzy Objects Modeling and Particle Systems	111
8.6	Shadows	112
8.7	Spatial Anti-aliasing	114
8.8	Motion Blur and Temporal Anti-aliasing	116
9.	Human Modeling and Animation.	121
9.1	Stick, Surface and Volume Models	121
9.2	The NUDES System	124
9.3	The Badler Bubbleman.	125
9.4	Labanotation	127
9.5	Hand Representation.	130
9.6	Facial Animation	130
10.	Object-oriented and Actor Languages and Systems	135
10.1	Classes, Modules and Processes	135
10.2	Kay's Work and SMALLTALK	136
10.3	Hewitt's Actor Theory	137
10.4	LOGO and the DIRECTOR Actor-based Animation Language	138
10.5	ASAS: The Actor/Scriptor Animation System.	140

10.6	CINEMIRA: A Language Based on Actor and Camera Data Types	143
10.7	MIRANIM: An Extensible Director-oriented 3D Animation System	153
11.	Case Studies	165
11.1	Decor with Bridges and Houses	165
11.2	Computer Animation of a Robotic Arm	170
11.3	An Example of the Design of a Camera Path	172
11.4	A Scene with a Shaded Corvette.	174
11.5	Fireworks.	179
12.	A Case Study: <i>Dream Flight</i>	181
12.1	Why <i>Dream Flight</i> ?	181
12.2	Scenario and Storyboard	183
12.3	Decor Creation	183
12.4	Actors and Dynamic Objects in the Forest.	189
12.5	Seascape	193
12.6	Undersea Scene	195
12.7	The Organization of a Scene and Shooting	198
