

Preface	V
Contents	VII
1. The solubility of magnetite in water and in aqueous solutions of acid and alkali	1
1.1. General	1
2. Chemical aspects of magnetite solubility in water	3
2.1. Introduction	3
2.2. The isoelectric point as the pH of the uncharged surface	4
2.3. Reaction and ions determining the charge	4
2.4. The hydration of the oxide	5
2.5. Strength of the iron/oxygen bonds in magnetite	5
2.6. Formation of magnetite from an iron solution	6
2.7. Polycondensation of ferric hydroxide	8
2.8. Polyaddition of iron(III) hydroxide	8
2.9. Ferro-ferrite formation as a mixed polycondensation and its pH limits	9
2.10. Polycondensation of iron(II) hydroxide as a preliminary stage of magnetite formation	11
2.11. Significance of the hydrogen partial pressure for the solubility of the magnetite	12
2.12. Conclusions	13
3. The solubility of iron(II) hydroxide and the protolysis behaviour of the hydrated iron(II) ion in aqueous solution	15
3.1. Introduction	15
3.2. The solubility of iron(II) hydroxide – a critical survey of the published data	15
3.3. Protolysis of the ferrous ion	26
4. The solubility of magnetite in pure water. A critical compilation of measured and calculated, published values.	36
4.1. Compilation of the measured values	36
4.2. Discussion of the measured values	53
4.3. Compilation of thermodynamic calculations of magnetite solubility	57
5. Measurements aimed at determining the solubility of magnetite in pure water and in boiler feedwater at temperatures up to 350 °C ...	72
5.1. The problems of magnetite solubility from the chemical aspect	72
5.2. The saturated solution of magnetite	73
5.3. Definition of the magnetite used for the determination	74
5.4. Experimental	75
5.4.1. Experimental apparatus	75

5.4.2.	Experimental conditions and procedure	76
5.4.2.1.	Iron analysis	77
5.4.2.2	Possible influence of the sampling procedure on the measured values	77
5.5.	Results of the determinations	78
5.6.	Discussion of the results	84
5.6.1.	Importance of the redox conditions	84
5.6.2.	Kinetics of the Schikorr reaction	88
5.6.3.	Solubility measurements in the closed system	88
5.6.4.	Influence of a pH increase by ammonia addition	90
5.7.	Summary	92
6.	The solubility of magnetite in dilute acid	93
6.1.	The chemical aspect	93
6.2.	Comparison of published/measured magnetite solubilities in the low acidity range. Significance for power station technology	101
6.3.	Own investigations into the kinetics of magnetite dissolution in acidic aqueous solution	103
7.	Solubility of magnetite in aqueous hydroxide solutions	106
7.1.	Introduction	106
7.2.	Comparison of the published measurements and calculated values	106
7.3.	Discussion and chemical aspects of the solubility of magnetite in hydroxide solutions	109
7.4.	Conclusions	114
8.	Description of the iron/sodium hydroxide/water system for relatively high sodium hydroxide concentrations	115
9.	Critical evaluation of the published data on the solubility of magnetite	121
9.1.	Critical evaluation of the measured values	121
9.1.1.	Surface properties and crystallinity of magnetite	121
9.1.2.	The aqueous magnetite solution	124
9.1.3.	Influence of the analysis method on the measured values	126
9.1.4.	Influence of the redox conditions	126
9.2.	Evaluation of the thermodynamically calculated solubilities	127
9.3.	Prospects	127
10.	Calculation of magnetite solubility from thermodynamic data	129
10.1.	Introduction	129
10.2.	Solubility equilibrium	129
10.3.	The problem of FeOOH and its G_f° value	131
10.4.	The contribution of $\text{Fe}(\text{OH})_2 \text{ aq}$ to the solubility of magnetite	135
10.5.	The contribution of FeOOH to the solubility of magnetite in pure water	137
10.6.	Dependence of the solubility of magnetite on the pH value	140
10.7.	The contribution of FeOOH to the solubility of Fe_3O_4 in the alkaline range	140
10.8.	Graphical representation of the solubility of magnetite in comparison with other methods of representation	140
