

Contents

1	The Value of Disease and Insect Pest Resistance	1
2	Concepts in Disease Resistance	4
2.1	Variability in Plant Pathogens	4
2.1.1	Variability in Fungal Pathogens	6
2.1.2	Variability in Bacteria	10
2.1.3	Variability in Viruses	10
2.2	Identification of Physiological Races	11
2.3	Genetic Nature of Physiological Specialization	14
2.4	The Importance of Parasitic Variability to the Plant Breeder	14
2.5	Resistance in the Host	15
2.5.1	Mechanisms of Resistance	15
2.5.2	Types of Resistance	19
2.6	Structural Defense Mechanisms	25
2.6.1	Preformed Defense Structures	25
2.6.2	Defense Structures Formed in Response to Infection by the Pathogen	27
2.7	Biochemical Defense Mechanisms	29
2.7.1	Pre-Existing Biochemical Defense	30
2.7.2	Induced Biochemical Defense	30
3	Concepts in Insect-Pest Resistance	35
3.1	Degree of Resistance	35
3.2	Functional Resistance	36
3.3	Types of Genetic Resistance	37
3.4	The Combination of Factors	49
3.5	The Biotypes of Insect Pest	50
3.6	Genetics of Virulence	51
3.7	Genetics of Resistance	52
3.7.1	Wheat	57
3.7.2	Rice	57
3.7.3	Raspberry	58
3.7.4	Tomato	58
3.8	Location of Gene(s) on Chromosomes	59
3.9	Problems Associated with Breeding for Resistance to Insects	60

4	Genetics of Host-Parasite Interaction	62
4.1	Genetics of Resistance	62
4.2	Inheritance of Induced Resistance	67
4.3	Genetics of Pathogenicity	68
4.4	Gene-for-Gene Concept	69
4.5	A Second Gene-for-Gene Hypothesis	73
4.6	The Gene-for-Gene and the Protein-for-Protein Hypothesis	74
4.7	Biochemical Basis of the Gene-for-Gene Hypothesis	74
4.8	How Does the Gene-for-Gene Relationship Come into the Picture?	75
4.9	Genetic Limitations to Models of Specific Interactions of the Host and its Parasite	76
4.10	Gene-for-Gene Basis in HR	76
4.11	Additive Effects, Genetic Background, Gene Dosage, Dominance Reversal, Heterotic Effect and Environmental Effects	77
4.12	The Vertifolia Effect	80
4.13	Host-Specific Phytotoxins and Pathogenesis	80
4.14	Population Genetics of Gene-for-Gene Interactions	82
4.15	Fitness Models of Gene-for-Gene Interactions	85
4.16	Vertical and Horizontal Resistance in Relation to Loss of Fitness	87
4.17	Epidemiology of Vertical and Horizontal Resistance	88
5	Sources of Resistance and Methods of Testing for Resistance	90
5.1	Sources of Resistance	90
5.2	Screening for Resistance to Diseases	104
5.2.1	Fungal Diseases	104
5.2.2	Bacterial Diseases	108
5.2.3	Tests for Resistance Using Toxins	109
5.3	Virus Diseases	110
5.4	Sequential Inoculations for Multiple Disease Resistance	112
5.4.1	Assessment of Disease Resistance	113
5.5	Methods of Testing for Resistance to Insect Pests	114
5.6	Assessment of Insect Pest Resistance	119
6	Breeding for Resistance to Diseases and Insects	121
6.1	Methods of Breeding for Resistance	121
6.1.1	Cross-Pollinated Crops	122
6.1.2	Self-Pollinated Crops	124
6.1.3	Vegetatively Propagated Crops	128
6.2	Management of Disease and Insect Resistance	129
6.2.1	Management of Vertical Resistance Gene(s)	130
6.2.2	Mechanism of Action of Multi-Lines	141
6.2.3	Multiple Resistance	144
6.3	Management of Tolerance	145
6.4	Management of Horizontal Resistance	147

7	Production of Disease-Resistant Plants by Unconventional Breeding	154
7.1	Basic Techniques in Plant Cell Culture	155
8	Stability and Vulnerability of Resistance	162
8.1	Stability of Specific Resistance	164
8.2	The Proposed Solution	165
