

# Contents

## I. HOMOLOGICAL ALGEBRA

1. Exact categories	1
2. Homology of complexes	7
3. Additive categories	11
4. Homotopy theory of complexes	16
5. Abelian categories	34
6. Injective resolutions	40
7. Right derived functors	51
8. Composition products	60
9. Resumé of the projective case	64
10. Complexes of free abelian groups	68
11. Sign rules	71

## II. SHEAF THEORY

0. Direct limits of abelian groups	74
1. Presheaves and sheaves	80
2. Localization	83
3. Cohomology of sheaves	91
4. Direct and inverse image of sheaves. $f_*, f^*$	96
5. Continuous maps and cohomology	100
6. Locally closed subspaces. $h_!, h^!$	106
7. Cup products	113
8. Tensor product of sheaves	118
9. Local cohomology	123
10. Cross products	130
11. Flat sheaves	140
12. $\text{Hom}(E, F)$	145

## III. COHOMOLOGY WITH COMPACT SUPPORT

1. Locally compact spaces	146
2. Soft sheaves	149
3. Soft sheaves on $\mathbb{R}^n$	157
4. The exponential sequence	162
5. Cohomology of direct limits	173
6. Proper base change and proper homotopy	176
7. Locally closed subspaces	183
8. Cohomology of the $n$ -sphere	187
9. Dimension of locally compact spaces	195
10. Wilder's finiteness theorem	200

## IV. COHOMOLOGY AND ANALYSIS

1. Homotopy invariance of sheaf cohomology	202
2. Locally compact spaces, countable at infinity	206
3. Complex logarithms	210
4. Complex curve integrals. The monodromy theorem	216
5. The inhomogenous Cauchy-Riemann equations	228
6. Existence theorems for analytic functions	231
7. De Rham theorem	237
8. Relative cohomology	249
9. Classification of locally constant sheaves	250

## V. DUALITY WITH COEFFICIENT IN A FIELD

1. Sheaves of linear forms	254
2. Verdier duality	259
3. Orientation of topological manifolds	266
4. Submanifolds of $\mathbb{R}^n$ of codimension 1	271
5. Duality for a subspace	276
6. Alexander duality	279
7. Residue theorem for $n-1$ forms on $\mathbb{R}^n$	284

## VI. POINCARÉ DUALITY WITH GENERAL COEFFICIENTS

1. Verdier duality	289
2. The dualizing complex $\mathcal{D}$	294
3. Lefschetz duality	297
4. Algebraic duality	299
5. Universal coefficients	303
6. Alexander duality	307

## VII. DIRECT IMAGE WITH PROPER SUPPORT

1. The functor $f_!$	313
2. The Künneth formula	319
3. Global form of Verdier duality	324
4. Covering spaces	327
5. Local form of Verdier duality	330

## VIII. CHARACTERISTIC CLASSES

1. Local duality	332
2. Thom class	337
3. Oriented microbundles	340
4. Cohomology of real projective space	347
5. Stiefel-Whitney classes	352
6. Chern classes	358
7. Pontrjagin classes	372

## IX. BOREL MOORE HOMOLOGY

1. Proper homotopy invariance	374
2. Restriction maps	377
3. Cap products	378
4. Poincaré duality	380
5. Cross products and the Künneth formula	382
6. Diagonal class of an oriented manifold	386
7. Gysin maps	390
8. Lefschetz fixed point formula	394
9. Wu's formula	397
10. Preservation of numbers	398
11. Trace maps in homology	399

## X. APPLICATION TO ALGEBRAIC GEOMETRY

1. Dimension of algebraic varieties	400
2. The cohomology class of a subvariety	402
3. Homology class of a subvariety	406
4. Intersection theory	409
5. Algebraic families of cycles	414
6. Algebraic cycles and Chern classes	420

## XI. DERIVED CATEGORIES

1. Categories of fractions	424
2. The derived category $D(A)$	430
3. Triangles associated to an exact sequence	441
4. Yoneda extensions	446
5. Octahedra	453
6. Localization	458
