

Table of Contents

Part I: Polymerization Reactions

Chapter 1: General Considerations

1.1	Introduction	17
1.2	Structural characteristics of polymers: Size and shape	17
1.2.1	Placement of monomer units and stereoregularity	19
1.2.2	Copolymers	23
1.3	Molecular weight distribution and molecular weight averages	24
1.4	Polymerization reactions	28
1.4.1	Stepgrowth	28
1.4.2	Chain polymerization	29
1.4.3	Thermodynamics	29
1.5	Polymerization conditions	30
1.5.1	Batch versus continuous	30
1.5.2	Single phase processes	31
1.5.3	Multiphase processes	32
1.5.4	Mass transport limitations	34

Chapter 2: Step-growth polymerization – Polycondensation

2.1	Overview	37
2.2	Calculation of molecular weights and molecular weight distributions in a polycondensate	42
2.3	Kinetics of step-growth polymerization, homogeneous, not diffusion controlled	48
2.4	Network formation by step-growth polycondensation	50
2.5	Examples of step-growth polymerization reactions	52
2.6	Special cases of polycondensation reactions	59
Appendices:		65
2 A	Summations	65
2 B	Molecular weight distribution for the case $r < 1$; $p_a = 1$	66

Chapter 3: Free Radical Chain Polymerizations

3.1	Introduction	69
3.2	Initiators and monomers fitted for free radical polymerization	69
3.3	Mechanisms of radical chain polymerization	73
3.4	Kinetics of radical polymerization	76
3.5	Kinetic chain length, average degree of polymerization	79
3.6	Influence of transfer reactions on the degree of polymerization	82
3.7	Determination of rate constants in homogeneous free radical polymerization	84
3.8	Temperature dependence of rate constants and degrees of polymerization	86
3.9	Trommsdorff effect	87

Chapter 4: Free Radical Chain Copolymerization

4.1	Introduction	91
4.2	Copolymerization and compositional heterogeneity	92
4.3	Determination of the radical reactivity ratios	99
4.4	Factors affecting the copolymerization reactivity	103
4.5	Q – e scheme	104
4.6	Kinetics of free radical copolymerization	104
4.7	Sequence distribution in radical copolymerization	106
4.8	Penultimate effects	109
4.9	Crosslinking free radical copolymerization	109
4.10	Specific cases	110

Chapter 5: Anionic Polymerizations

5.1	Introduction	114
5.2	Anionic polymerizations carried out in protic media	115
5.3	Anionic polymerization in aprotic media, “living” polymers	119
5.3.1	Reaction scheme	119
5.3.2	Kinetics and molecular weight distribution	120
5.3.3	Monomers, initiators and solvents	124
5.3.4	Specific features of anionic polymerizations in apolar solvents	132
5.3.5	Specific features of anionic polymerizations carried out in polar solvents	133
5.3.6	Applications of anionic “living” polymerizations	136
5.4	Stereoelective polymerizations	138
5.5	Activated monomer polymerizations	140

Chapter 6: Cationic Polymerizations

6.1	Introduction	145
6.2	Cationic polymerization of vinyl monomers	145
6.2.1	Initiators and initiation reactions	145
6.2.2	Propagation reactions	148
6.2.3	Transfer and termination reactions	148
6.2.4	Kennedy-Gilham scheme	150
6.2.5	Kinetic expressions	152
6.2.6	Inifer processes	155
6.2.7	Polymerization of isobutene and butyl rubber	156
6.3	Cationic polymerization of heterocycles	157
6.3.1	Initiation	158
6.3.2	Propagation	160
6.3.3	Transfer and termination	161
6.3.4	Living cationic ring opening polymerizations	162
6.3.5	Some specific cases	162
6.3.6	Other ring opening polymerizations	164

Chapter 7: Propagation-Depropagation Equilibria in Polymerization Processes

7.1 Introduction	168
7.2 Kinetics and thermodynamics of reversible propagation	169
7.3 Influence of reversibility on the molecular weight distribution	172
7.4. Consequences of the reversibility of the propagation step	174

Chapter 8: Stereospecific Polymerizations

8.1 General introduction	176
8.2 Ziegler-Natta initiating systems	177
8.3 Mechanisms involved in Ziegler-Natta polymerizations	179
8.4 Kinetics of Ziegler-Natta polymerizations	181
8.5 Ziegler-Natta ring opening polymerizations	184
8.6 Ziegler-Natta copolymerization	184
8.7 Applications of Ziegler-Natta systems	185
8.8 Other stereoregulating catalyst systems	185

Chapter 9: Chemical reactions on polymers

9.1 Introduction	188
9.2 Chemical reactions involving the backbone chain	189
9.2.1 Oxidative degradation	189
9.2.2 Chain unzipping	191
9.2.3 Cleavage by ozone	191
9.2.4 Per-iodic acid cleavage	191
9.2.5 Free radical crosslinking	192
9.2.6 Vulcanization of elastomers	192
9.3 Chemical reactions involving the functions	193
9.3.1 Kinetic aspects	193
9.3.2 Cyclization reactions	197
9.3.3 Examples of reactions	199

Chapter 10: Functional Polymers, Block and Graft Copolymers, Model Networks

10.1 Introduction	209
10.2 Functional polymers	210
10.2.1 By step growth polymerization	210
10.2.2 By free radical polymerization	211
10.2.3 By anionic polymerization	213
10.2.4 By cationic polymerization	213
10.3 Block copolymers	214
10.3.1 By free radical polymerization techniques	214
10.3.2 By anionic living polymerization techniques	215
10.3.3 Other techniques	217
10.4 Graft copolymers	220
10.4.1 Grafting from	220
10.4.2 Grafting onto	222
10.4.3 Graft copolymer synthesis via macromonomers	222

10.5 Network formation	224
10.5.1 General methods – Random crosslinking	224
10.5.2 Endlinking methods	226

Part II: Reactors and Processes for Manufacturing Polymers

Chapter 11: Reactors and Processes for Homogeneous (single phase) Reactions

11.1 Retrospect and prospect	228
11.2 Batch and continuous reactors: models	230
11.3 Batch reactors and processes for homogeneous reactions leading to linear polymers	232
11.4 Batch reactors and processes for homogeneous reactions leading to cross-linked polymers	234
11.5 Plug flow reactors and processes for homogeneous reactions	240

Chapter 12: Heterogeneous Free Radical Polymerizations

12.1 Suspension polymerization	243
12.2 Emulsion polymerization	247
12.3 High pressure radical polymerization of ethylene	260
12.4 “Precipitation” radical polymerizations	262

Chapter 13: Reactors and Processes for Heterogeneous Ionic Polymerizations and Reaction Injection Molding

13.1 Polyisobutylene and butyl rubber via refrigerated slurry polymerization . . .	270
13.2 Reaction injection molding of polyurethanes	272
13.3 Reaction injection molding of nylon 6 via anionic polymerization of caprolactam	273

Chapter 14: Reactors and Processes for Heterogeneous Catalytic Polymerization

14.1 What is a catalyst, and what is a heterogeneous catalyst?	275
14.2 Micromolecules, Macromolecules and heterogeneous catalysts	276
14.3 Polymerization by heterogeneous catalysts with continuous liquid phase . . .	278
14.4 Fluidized bed polymerization of ethylene	281
