

Contents

Part I. Thermodynamics of Materials

1. Thermodynamical Constitutive Laws - Outlines -
By W. Muschik 3
2. Thermodynamical Considerations on Plastic and
Viscoplastic Behaviour of Solid Bodies
By Th. Lehmann27
3. Metal Plasticity as a Problem of Thermodyna-
mics
By J. Kestin43
4. Description and Simulation of Shape Memory
By I. Müller47

Part II. Stochastic Processes and Material Behaviour

1. Markov-Chains as Models for the Inelastic Be-
haviour of Metals
By E. Steck63
2. Stochastic Analysis of Structural Changes in
Solids
By D.R. Axelrad77

Part III. Constitutive Relations for Simple Fluids and Micro- physics of Solids

1. Molecular Dynamics: Test of Microscopic Models
for the Material Properties of Matter
By S. Hess and W. Loose93
2. Localization of Waves due to Disorder in Solids
By Ch. Enz115
3. Electromagnetic Control of Material Properties
in Multipole Elastic Composites
By R. Hsieh129

4.	Thermodynamic Modelling of Polymers in Solution	
	By G. Maugin and R. Drouot.....	137
5.	A Microphysical Model of Crystallizing Polymers	
	By K. Wilmanski.....	163
Part IV.	<u>Discussion</u>	175
	List of Participants.....	205
