

CONTENTS

PART I LASER DIAGNOSTICS

1. Laser Velocimetry

- 1.1 Sizing and velocity measurement of particles in spray jet using a two-colour, four-beam LDV. 1
- 1.2 Measurements of turbulent structures in premixed flame with multi-point LDVs 11
- 1.3 Velocity measurements in combustion fields using a Laser-2-Focus velocimeter 21

2. LDV Application

- 2.1 Simultaneous measurement of temperature and velocity in turbulent diffusion flames by Rayleigh scattering and LDV system 29
- 2.2 Flow characteristics of an unsteady jet ejected into a prechamber spark ignition engine 35
- 2.3 The flow characteristics in a swirl type combustor. 45
- 2.4 Velocity and turbulence measurements in model gas-turbine combustion chambers and comparison with a model calculation 55

3. Spray Measurement

- 3.1 Development of a time-resolved particle sizer and spray sizing in high back-pressure injection. 63
- 3.2 A new direct analysis method for measuring particle size and location by inline hologram. 71
- 3.3 Determination of the characteristics of diesel spray by the bidirectional light scattering image processing method 77
- 3.4 Measurements of the fuel vapor concentration in a diesel spray by analysis of reconstructed hologram images 89

4. Soot Measurement

- 4.1 Laser schlieren photography for visualizing soot in a diesel flame in a rapid compression machine. 99
- 4.2 On the simultaneous measurement of the diameter of soot particle and its optical constant in flames. 105

5. Raman Spectroscopy

- 5.1 CARS thermometry for high pressure gases 111
- 5.2 Measuring temprature in propane-air pre-mixed laminar flame using the IRS method 117
- 5.3 Multiple species concentration and temperature measurements in hydrocarbon flame by pulsed laser Raman 125
- 5.4 Application of UV and VUV excimer lasers in combustion measurements using enhanced Raman scattering 133

6. Non-Raman Spectroscopy

- 6.1 Using two-photon absorption to measure the temperature and concentration of nitric oxide in propane/oxygen flames 141
- 6.2 Measuring the mass fraction burned of a methane-air mixture by a diode-laser absorption spectrometry 147
- 6.3 A laser light-scattering method for investigating the ionized state in a propagating flame 155

7. Image Technique

- 7.1 Development of a twin pulse high-speed holography system to measure combustion 163
- 7.2 Monochromatic image acquisition system for real-time observations of continuous and pulsed emission of light 171
- 7.3 Combustion diagnostics by electronic speckle pattern interferometry using a CCD image sensor 181

8. Image Processing

- 8.1 Measurement of three-dimensional flame temperature fields by holographic interferometry and computed tomography 187
- 8.2 Three-dimensional measurement of the shape of combustion flames 195

PART II MODELING**9. Molecular Process Analysis**

- 9.1 Laser-induced fluorescence of unstable intermediates in combustion: HSO and H₂CS 203
- 9.2 Collisional deactivation of vibrationally highly excited hexafluoro-benzene molecules 211
- 9.3 The vibrational relaxation of N₂ coupled with H₂-O₂ combustion reactions behind shoch waves 217

10. Combustion Analysis in Piston Engine

10.1 Spark ignition process in internal combustion engines 225

10.2 Turbulent combustion in the cylinder of a spark-ignition engine 235

10.3 Experiments on turbulent burning velocities of premixed mixtures in a closed bomb 243

10.4 Gas velocity and turbulence measurement in a spark ignition engine using a LDA with a fiber-optic pick-up 251

10.5 Photographic measurement of air entrainment in two-dimensional fuel jets 259

10.6 Effects of in-cylinder air flow on diesel combustion 267

11. Combustion Analysis in Burner System

11.1 Direct measurements of the turbulent transport of momentum and heat in the swirling flame 273

11.2 Time scale distribution of laminar flamelets in turbulent premixd flames 281

11.3 Development of a laboratory automation system for measuring the characteristics of transient gas jets 287

12. Flow Simulation

12.1 Multidimensional modeling of flow and heat transfer during the intake and compression processes in a motored engine cylinder 293

12.2 Prediction of gas flows in a internal combustion engines 303

13. Combustion Simulation

13.1 Wall quenching of methane-air flame 311

13.2 Numerical simulation of laminar flame propagation in constant volume vessels 319

13.3 A theoretical study of supercritical liquid fuel combustion 329

13.4 Turbulent mixing model of diesel combustion 339

13.5 Modeling the structure of a turbulent diffusion flame over a flat plate with fuel injection 347

Subject Index 353
