Introduction	xi
------------------------	----

I. Linear Equilibrium Aggregates

1. Statistical Thermodynamic Background	3
1. Canonical and Grand Partition Functions	4
2. Aggregation and Osmotic Pressure Virial Coefficients	6
3. Partition Function for an Open, Independent Aggregate	18
4. The Macroscopic Aggregate as a Limiting Case	23
2. Attached Single-Stranded Polymer	32
5. Attached Polymer at Equilibrium or Steady State	33
6. Attached Polymer in Transients	42
7. Attached Polymer under a Force	51
3. Free Single-Stranded Polymer	78
8. Free Polymer at Equilibrium	78
9. Kinetic Aspects for a Free Polymer	90

4. Single-Stranded Polymer Modified by a Second Component, a Bound Ligand, or a Cap	110
10. Two-Component Single-Stranded Polymer	110
11. Single-Stranded Polymer with Bound Ligand or Cap.	122
5. "Surface" Properties of Some Long Multi-Stranded Polymers.	137
12. General Discussion of the Models	137
13. Equilibrium and Steady-State Properties of Aligned Models	144
14. Equilibrium and Steady-State Properties of Staggered Models.	156
15. Models with Dimers as Subunits	167
6. Some Attached Multi-Stranded Polymers at Equilibrium and in Transients.	174
16. Simple Dual Aggregation and the Vernier Effect	174
17. Dual Aggregation with Vernier Enhancement	184
18. A Further Example of Dual Aggregation	190
19. Aligned Tubular Models at Equilibrium.	193
 II. Linear Steady-State Aggregates	
7. Enzymatic Activity at Polymer Tips Only	199
20. Enzymatic Activity along the Polymer Length	200
21. Enzymatic Activity at Polymer Tips Only: Bioenergetics and Fluxes ..	203
22. Enzymatic Activity at Polymer Tips Only: Length Distributions and Transients	219
23. Fluctuations in the Polymer Length Distribution.	223
8. NTP Caps and Possible Phase Changes at Polymer Ends.	227
24. Illustrative Biochemical Models that Generate Phase Changes.	228
25. Attached Polymer with Phase Changes at the Free End	244
26. Free Polymer with Phase Changes at the Ends.	265
27. Simulation of Two "Phases" by Aggregation of One Component on Another	284
Index	303
