
CONTENTS

Preface v

Acknowledgements vii

1. Introduction 1
 - Productivity and the standard of living 1
 - Productivity of the construction enterprise 3
 - Work study and the construction industry 7
 - The techniques of work study 9
2. Method study 13
 - Basic procedures 13
 - Select the work to be studied 14
 - Obtain and record the facts 17
 - Examine the facts 29
 - Develop the new idea 31
 - Install the new method 32
 - Maintain the new method 33
 - Site layout 33
3. Work measurement 41
 - Uses and techniques 41
 - Time study equipment 43
 - Making the time study 46
 - Relaxation allowances 51
 - Derivation of standard times 54
 - Excavation and loading of soils by hand 61
 - Activity sampling 61
 - Feedback of output data 69
 - Using the output data 73
4. Work study – the general approach to some major construction operations 77
 - Plant utilisation 77
 - Machine excavation 80
 - Concreting operations 81
 - Formwork manufacture, erection, removal, cleaning and salvaging 82
 - Steel reinforcement 83
 - Control of materials 86
5. Motivation and incentives 91
 - Productivity of labour 91

IX

The human factor	91
The competence of site management	91
Motivation of workers	92
Financial incentive schemes	94
Task work	100
Advantages and disadvantages of financial incentive schemes	101
Rules to be observed in operating financial incentive schemes	102
6. Organising for work study	103
Stages of a construction project	104
General management structure of the enterprise	104
Role of the work study engineer	105
Work study technicians	106
7. Practical examples	109
Multiple activity chart – Pouring concrete upper floor slab	109
Gang balance	114
Site layout	117
Rated activity sampling	123
