Advisory Board . . . . .	V
Preface . . . . .	VI
Table of Contents . . . . .	VII

## I. REVIEWS OF THE RECENT LITERATURE . . . . . 1

### Reviews of the Recent Literature . . . . . 3

*J. Mitchell, Jr., Wilmington, Delaware, USA*

A. General . . . . .	4
B. Chemical Methods: Elemental, Electrochemical, Polarography . . . . .	6
1. Elemental analysis . . . . .	6
2. Titrimetry . . . . .	7
3. Polarography . . . . .	9
C. Infrared and Raman Spectroscopy . . . . .	10
1. Infrared (IR) spectroscopy . . . . .	10
2. Raman spectroscopy . . . . .	15
D. Ultraviolet-Visible (UV-Vis) Spectroscopy . . . . .	16
E. Nuclear Magnetic Resonance (NMR) and Electron Spin Resonance (ESR) Spectroscopy . . . . .	17
F. Other Spectroscopic Methods . . . . .	22
G. Mass Spectrometry (MS) . . . . .	25
H. X-Ray Methods . . . . .	28
1. X-ray diffraction (XRD) . . . . .	28
2. X-ray fluorescence/spectroscopy (XRF, XRS) . . . . .	29
I. Microscopy . . . . .	30
1. Optical microscopy . . . . .	30
2. Electron microscopy . . . . .	31
3. Scanning electron microscopy (SEM) . . . . .	31
J. Thermal Methods . . . . .	32
1. Introduction . . . . .	32
2. Thermal techniques . . . . .	33
3. Pyrolysis . . . . .	35
K. Chromatography . . . . .	36
1. Introduction . . . . .	36
2. Gas chromatography (GC) . . . . .	36
3. Liquid chromatography (LC, HPLC) . . . . .	48
4. Gel chromatography . . . . .	48
5. Ion chromatography . . . . .	49
6. Thin layer chromatography . . . . .	49
L. Other Separation Methods . . . . .	51

M.	Molecular Weight (MW), Molecular Weight Distribution (MWD) . . . . .	52
1.	Gel permeation/Size exclusion chromatography (GPC, SEC) . . . . .	52
2.	Field flow fractionation (FFF) . . . . .	56
3.	Light scattering (LS) . . . . .	57
4.	Rheology, Viscometry . . . . .	59
N.	Physical Measurements . . . . .	61
O.	Miscellaneous Techniques . . . . .	65
1.	General . . . . .	65
2.	Electrophoresis . . . . .	66
3.	Radiochemical Methods . . . . .	67
P.	References . . . . .	68

## II. ADVANCES IN ANALYSIS AND CHARACTERIZATION METHODS 83

### II-A. The Use of Aromatic Nitro Compounds in Polymer Analysis . . . . . 85

*Jerzy Urbański, Radom, Poland*

1.	Introduction . . . . .	85
2.	Alcoholic Hydroxyl Groups . . . . .	86
3.	Phenolic Hydroxyl Groups . . . . .	86
a.	Acylation . . . . .	86
b.	Coupling . . . . .	88
4.	Epoxy Groups . . . . .	88
5.	Olefinic Double Bonds . . . . .	90
6.	Carbonyl Groups . . . . .	90
7.	Amino Groups . . . . .	92
8.	References . . . . .	94

### II-B. Dye Extraction Method for Functional Group Analysis in Polymers . . . . . 97

*B. M. Mandal, Jadavpur, Calcutta, India*

1.	Introduction . . . . .	97
2.	Selectivity . . . . .	98
3.	Dyes and Diluents . . . . .	99
4.	Limitations . . . . .	99
5.	Quantitative Aspects and Theoretical Treatment . . . . .	99
6.	Experimental Procedure . . . . .	103
a.	Determination of strong acid functions or their salts ( $\text{SO}_3^-$ , $\text{OSO}_3^-$ , etc.) . . . . .	103
b.	Estimation of cationic (end) groups, e. g., alkylammonium groups . . . . .	105
c.	Estimation of anionic (end) groups (strong as well as weak acid) . . . . .	106
7.	Determination of other end groups . . . . .	106
a.	Hydroxyl groups . . . . .	106
b.	Halogen atom bearing groups . . . . .	106
c.	Cyano groups . . . . .	106
8.	Interferences . . . . .	106
9.	Polymers with Large Numbers of Functional Groups per Molecule . . . . .	107
10.	Reproducibility and Remarks . . . . .	107
11.	References . . . . .	108

<b>II-C. Some Modern Methods for Element Determinations</b> . . . . .	109
<i>H. J. Francis, Jr., King of Prussia, PA, USA</i>	
1. Introduction . . . . .	109
a. Oxygen flask combustion technique . . . . .	111
2. Sample handling . . . . .	113
3. Determination of Elements . . . . .	114
a. Determination of C, H, and N . . . . .	115
b. Determination of C, H, N, O, and S . . . . .	118
c. Determination of N: Kjeldahl method . . . . .	121
d. Determination of halogens: chlorine and bromine . . . . .	121
e. Determination of halogens: bromine . . . . .	122
f. Determination of halogens: iodine . . . . .	122
g. Determination of halogens: fluorine via ion selective electrode . . . . .	122
h. Determination of sulfur: visual titration procedure . . . . .	124
i. Determination of phosphorus: yellow procedure . . . . .	124
j. Determination of fluoride: titration using $F^-$ ion selective electrode. . . . .	125
4. References . . . . .	126
<b>II-D. Electrochemical Methods in Polymer Analysis</b> . . . . .	127
<i>B. Philipp and H. Anders, Teltow-Seehof, German Democratic Republic</i>	
1. Introduction . . . . .	127
2. Determination of Low Molecular Weight Compounds in Polymers by Electrochemical Methods . . . . .	128
3. Application of Electrochemical Methods to the Characterization of Macromolecules in Solution . . . . .	130
a. Application of electrochemical methods to conventional polymer characterization . . . . .	130
b. Special application to electrochemical methods to polyelectrolyte systems . . . . .	134
4. Application of Electrochemical Methods for the Characterization of Solid State Polymers, resp. Heterophase Polymer Systems . . . . .	136
5. Concluding Remarks . . . . .	139
6. References . . . . .	140
<b>II-E. Raman Spectroscopic Investigations of Drug-Membrane Interactions</b> . . . . .	143
<i>L. W. Levin and T. J. O'Leary, Bethesda, MD, USA</i>	
1. Introduction . . . . .	143
2. Relationship Between Vibrational Spectra and Structural Properties of Membrane Bilayers . . . . .	144
3. Drug-Membrane Interactions . . . . .	147
a. Anesthetics and sedative hypnotics . . . . .	147
b. Polypeptide antibiotics . . . . .	151
c. Amphotericin B . . . . .	154
4. Concluding Remarks . . . . .	154
5. References . . . . .	155

**II-F. Acoustic Emission of Polymers** . . . . . 157*Renyan Qian and Xiaoguang Zhu, Beijing, People's Republic of China*

1.	Introduction	157
2.	Instrument	158
3.	The Signal	159
4.	Mode of Stressing	160
5.	The Kaiser Effect	163
6.	Glassy Polymers	165
7.	Semi-Crystalline Polymers	166
8.	Polymer Blends	168
9.	Polymer Composites	171
10.	Temperature Jump	173
11.	References	173

**II-G. Thermogravimetry for Chemical Analysis of Polymers** . . . . . 175*Jen Chiu, Wilmington, Delaware, USA*

1.	Introduction	175
2.	Analysis by Direct Thermogravimetry (TG)	176
a.	Qualitative identification	176
(1)	By "fingerprinting"	176
(2)	By specific curve features	177
b.	Compositional analysis	177
(1)	Additives	177
(2)	Polymer blends and copolymers	181
3.	Combined Thermogravimetry-Evolved Gas Analysis	184
a.	Coupled thermogravimetry-infrared spectroscopy (TG-IR)	185
b.	Coupled thermogravimetry-mass spectrometry (TG-MS)	181
c.	Coupled thermogravimetry-gas chromatography (TG-GC)	194
d.	Coupled TG-GC-IR	196
e.	Coupled TG-GC-MS	199
f.	Coupled thermogravimetry-photometry	203
g.	Coupled thermogravimetry-electrochemical analysis	205
h.	Miscellaneous techniques	209
4.	Conclusions	212
5.	References	212

**II-H. Polymer Characterization by High-Resolution Pyrolysis-Gas Chromatography** . . 217*H. Ohtani and S. Tsuge, Nagoya, Japan*

1.	Introduction	217
2.	Instrumentation	218
a.	Pyrolyzer	218
b.	Capillary column	219
c.	Pyrogram interpretations	219
3.	Applications	221
a.	Microstructural characterization of polyolefins by PyHGC	221
b.	Thermal degradation mechanisms of aliphatic polyamides	224

c.	Compositional analysis . . . . .	224
d.	Sequence distributions of copolymers . . . . .	227
e.	Polymers with tridimensional structures . . . . .	229
f.	Natural polymers . . . . .	230
4.	References . . . . .	231

**II-I. Size Exclusion Chromatography . . . . . 233**

*John V. Dawkins and Ana Montenegro, Loughborough, Leicestershire, England*

**II-J. Determination of Molecular Mass Distribution of Polymers by a Combination of Dynamic Light Scattering, Gel Permeation Chromatography and other Methods . . 237**

*I. Tomka and G. Vancso, Zurich, Switzerland*

1.0	Introduction . . . . .	238
2.0	Influence of Molecular Mass on Some Selected Properties of Polymers . . . . .	238
2.1	Mechanical Properties in the Solid State . . . . .	240
2.2	Dynamical Properties in the Melt . . . . .	241
3.0	Methods for the Determination of the Molecular Mass Distribution . . . . .	244
4.0	Gel Permeation Chromatography . . . . .	246
4.1	Axial Dispersion and Separation in GPC . . . . .	246
4.1.1	The Model Substance . . . . .	247
4.1.2	Selection of Elution Velocity and Geometrical Parameters of the Bed . . . . .	247
4.1.3	Determination of the Overall Hydrodynamic Volume Dependent Dispersion Coefficient . . . . .	249
4.1.4	Alternative Methods for Line Broadening Corrections . . . . .	251
4.2	Analysis of Errors Arising from Molecular Mass Distribution Determination by GPC . . . . .	252
4.2.1	The Precision of GPC Calibration . . . . .	255
4.2.2	Results of the Error Analysis for GPC . . . . .	256
4.3	Quantitative Determination of Molecular Mass Distribution from GPC Spectra . . . . .	259
4.4	Conclusion . . . . .	259
5.0	Light Scattering Measurements . . . . .	260
5.1	The Time Autocorrelation Function of the Scattered Intensity . . . . .	260
5.2	Determination of the Molecular Mass Distribution Function by Use of Photon Correlation Spectroscopy . . . . .	264
5.3	Testing of Constrained Regularisation Method on Simulated Data . . . . .	266
5.3.1	Simulation of the First Order Photon Correlation Spectra . . . . .	267
5.3.2	Tests for the Constrained Regularisation Method . . . . .	268
5.3.2.1	Results for Monodisperse Distribution Functions . . . . .	269
5.3.2.2	Results for Poisson and Most Probable Distribution Functions . . . . .	270
5.3.3	Experimental Results . . . . .	272
6.0	Conclusions . . . . .	274
7.0	References . . . . .	275

**II-K. New Developments in the Characterization of Polymers by Transmission Electron Microscopy . . . . . 277***I. G. Voigt-Martin, Mainz, Federal Republic of Germany*

1.	Introduction . . . . .	277
2.	Conventional Electron Microscopy . . . . .	278
a.	Single crystals . . . . .	278
b.	Bulk polymers . . . . .	278
c.	Thin films . . . . .	279
d.	The origin and use of phase contrast . . . . .	279
e.	Decoration technique . . . . .	280
f.	Staining techniques . . . . .	281
3.	The Modern Electron Microscope . . . . .	282
a.	Scanning transmission electron microscopy . . . . .	282
b.	Detection of back-scattered and secondary electrons . . . . .	285
c.	Energy dispersive x-ray analysis . . . . .	285
d.	Electron energy loss spectroscopy . . . . .	287
4.	Radiation Damage . . . . .	289
5.	Ancillary Equipment . . . . .	289
a.	Cryoultramicrotome . . . . .	290
b.	Evaporation unit . . . . .	290
c.	Ion etch unit . . . . .	291
d.	Image analysis . . . . .	293
e.	Light microscopes . . . . .	293
f.	Small angle light scattering equipment . . . . .	293
6.	References . . . . .	295

**II-L. Differential Thermomechanical Analysis of Polymers . . . . . 297***Péter Hedvig, Budapest, Hungary*

1.	Introduction . . . . .	297
a.	Creep . . . . .	298
b.	Stress relaxation . . . . .	299
2.	Principle of the Method . . . . .	300
3.	Experimental . . . . .	302
a.	Differential thermally stimulated creep and recovery at constant load (DTSC and TSR) . . . . .	304
b.	Isochronous differential thermally stimulated creep (1-DTSC) . . . . .	304
c.	Differential thermally stimulated stress relaxation (DTSSR) . . . . .	305
d.	Thermal sampling . . . . .	306
4.	Illustrative Results . . . . .	306
5.	Conclusions . . . . .	311
6.	References . . . . .	311

<b>III. APPROACHES TO PROBLEM SOLVING</b> . . . . .	313
<b>III-A. Analysis of Polymers by Fourier Transform Infrared Spectroscopy</b> . . . . .	315
<i>J. G. Grasselli, S. E. Mocadlo, and J. R. Mooney, Cleveland, OH, USA</i>	
1. Introduction . . . . .	315
2. Application to Polymers . . . . .	316
3. Combined Techniques . . . . .	321
4. Special Techniques . . . . .	323
5. Conclusion . . . . .	325
6. References . . . . .	326
<b>III-B. Infrared Spectral Examination of Volatile Effluents from the Thermal Treatment of Polymers</b> . . . . .	329
<i>B. B. Baker, Jr., Wilmington, DE, USA</i>	
1. Information Obtainable . . . . .	329
2. Sources of Samples . . . . .	330
a. Laboratory Thermal Experiments . . . . .	330
b. Quantitative Evaluation of Extruder Effluents . . . . .	331
c. Ambient Air Around Polymer Processing Operation . . . . .	333
3. Identification of Compounds from Their IR Vapor Spectra . . . . .	333
a. Advantages of modern FTIR spectrometers . . . . .	333
b. Use of a principal band list for identification . . . . .	334
c. Collections of reference vapor spectra in the literature . . . . .	335
4. Quantitative Analysis . . . . .	335
5. References . . . . .	339
<b>III-C. Determination of Long Chain Branching of Polymers by Multitechnique Procedures</b> . . . . .	341
<i>Z. Dobkowski, Warszawa, Poland</i>	
1. Introduction . . . . .	341
2. LCB Parameters . . . . .	342
3. Relations Between Overall and Structural LCB Parameters . . . . .	344
4. Dependence of Polymer Properties on LCB Parameters . . . . .	345
5. Determination of LCB Parameters . . . . .	346
a. Structural LCB parameters . . . . .	346
(1) Type of branching and functionality . . . . .	346
(2) Average number of branch points . . . . .	347
(a) The number average values . . . . .	347
(3) Average molecular weight of segments between branch points . . . . .	350
(4) Branching frequency . . . . .	350
(5) Weight average number of branch points . . . . .	351
b. Overall branching parameters . . . . .	351
6. References . . . . .	354

<b>III-D. A Characterization of the Structure and Synthetic Reactions of Polyamidoamine "Starburst" Polymers</b> . . . . .	357
<i>P. B. Smith, S. J. Martin, M. J. Hall, and D. A. Tomalia, Midland, Michigan, USA</i>	
1. Introduction . . . . .	357
2. Experimental . . . . .	360
3. Polyamidoamine Starburst Reactions . . . . .	361
4. Statistical Prediction and Experimental Verification of Linking Reactions . . . . .	372
a. Probability of diamine forms . . . . .	372
b. Probability of diamine forms (uniform amine reactivities) . . . . .	373
c. Distribution of linked starbursts . . . . .	373
d. Characterization of reaction products . . . . .	373
(1) Synthesis . . . . .	373
(2) C-13 NMR . . . . .	374
(3) Size exclusion chromatography . . . . .	374
(4) Intraburst links . . . . .	375
5. C-13 NMR Spectral Assignments of Starburst Polymers . . . . .	375
6. Structure Characterization Through G 5.0 . . . . .	379
7. Summary . . . . .	385
8. References . . . . .	385
<b>III-E. Identification of Textile Fibers</b> . . . . .	387
<i>Maria Stratmann, Kevelaer, Federal Republic of Germany</i>	
1. Introduction . . . . .	388
2. Microscopic Tests . . . . .	388
a. Natural fibers . . . . .	388
b. Man-made fibers . . . . .	389
c. Blended material . . . . .	390
d. Bi-component fibers . . . . .	391
3. Stain Tests . . . . .	393
4. Optical Behavior of Fibers . . . . .	394
a. Embedding in mediums having different refractions . . . . .	394
b. Testing in polarized light . . . . .	395
5. Melting Points of Fibers . . . . .	395
6. Solubility Tests . . . . .	395
a. Tests in a test tube . . . . .	396
b. Solubility tests under a microscope . . . . .	397
c. Evaluation of solubility tests . . . . .	399
7. Behavior of Fibers on Embedding in Specific Reagents . . . . .	406
a. Reactions in cuprammonium hydroxide ("Cuoxam") . . . . .	407
b. Reactions in zinc chloride-iodine . . . . .	407
c. Reactions in zinc chloride-formic acid . . . . .	408
d. Reactions in "Frotté-Reagents" I and II . . . . .	409
8. Practical Examples . . . . .	410
a. Blended material consisting of wool (x), viscose (round cross-section) (y), and polyamide-6,6 (z) . . . . .	410
b. Spun yarn consisting of wool (x), viscose (y), poly(vinyl chloride) (z) fibers . . . . .	410

c.	Blended material consisting of regenerated cellulose (x) and acrylic fibers (y) . . . . .	410
d.	Blends of polyester (x) and polyacrylate (y) . . . . .	410
e.	Pile material of a weft-fur (acrylic and modacrylic) . . . . .	410
9.	References . . . . .	411

**III-F. Tapes with Adhesive Backings: their Characterization in the Forensic Science Laboratory . . . . . 413**

*R. D. Blackledge, Frankfurt, Federal Republic of Germany*

1.	Introduction . . . . .	413
2.	Preliminary Examinations . . . . .	413
3.	Instrumental Methods . . . . .	415
a.	Elemental analysis . . . . .	415
b.	Infrared spectroscopy . . . . .	415
c.	Pyrolysis-gas chromatography . . . . .	418
d.	Pyrolysis-mass spectrometry . . . . .	418
e.	Other methods . . . . .	419
4.	Summary . . . . .	419
5.	References . . . . .	420

**III-G. Determination of Polymer Chain Microstructure by Fluorine-19 Nuclear Magnetic Resonance Spectroscopy . . . . . 423**

*R. N. Majumdar, Morristown, NJ, USA and H. J. Harwood, Akron, OH, USA*

1.	Introduction . . . . .	425
a.	Special aspects of <sup>19</sup> F-NMR spectroscopy as applied to polymers . . . . .	426
b.	Structural features of interest in fluorine-containing polymers . . . . .	426
c.	Definitions and statistical aspects . . . . .	427
d.	Nomenclature conventions . . . . .	429
e.	Conventions for reporting chemical shifts . . . . .	431
f.	Methods used to assign <sup>19</sup> F-resonances . . . . .	431
(1).	Correlation of <sup>19</sup> F- and <sup>13</sup> C-methyl chemical shifts . . . . .	432
(2).	Empirical chemical shift calculations . . . . .	432
(3).	Rotational isometric state calculations . . . . .	434
2.	Homopolymers . . . . .	438
a.	Zero pseudoasymmetric carbon atoms in the main chain . . . . .	438
(1).	Polytetrafluoroethylene . . . . .	438
(2).	Poly(vinylidene fluoride) . . . . .	438
(3).	Poly(thiocarbonyl fluoride) . . . . .	443
b.	One pseudoasymmetric carbon atom in the main chain . . . . .	444
(1).	Poly(vinyl fluoride) . . . . .	444
(2).	Poly(1-chloro-1-fluoroethylene) . . . . .	449
(3).	Polytrifluoroethylene . . . . .	449
(4).	Polybromotrifluoroethylene . . . . .	452
(5).	Polychlorotrifluoroethylene . . . . .	452
(6).	Poly(methyl- $\alpha$ -fluoroacrylate) . . . . .	455
(7).	Poly(ethyl- $\alpha$ -fluoroacrylate) . . . . .	455
(8).	Poly(vinyl trifluoroacetate) . . . . .	456

	(9). Poly(trifluoromethyl trifluorovinyl ether) . . . . .	456
	(10). Poly( $\alpha$ -fluorostyrene) . . . . .	456
	(11). Poly( $p$ -fluorostyrene) . . . . .	456
	(12). Poly $\alpha,\beta,\beta$ -trifluorostyrene) . . . . .	458
	(13). Poly( $p$ -methyl- $\alpha,\beta,\beta$ -trifluorostyrene) . . . . .	460
	(14). Poly( $p$ -fluoro- $\alpha$ -methylstyrene) . . . . .	460
	(15). Poly( $p$ -trifluoromethyl- $\alpha$ -methylstyrene) . . . . .	460
c.	Two pseudoasymmetric carbon atoms in the main chain . . . . .	461
	(1). Polyfluoromethylene or poly(1,2-difluoroethylene) . . . . .	461
	(2). Poly(1-chloro-2-fluoroethylene) . . . . .	461
3.	Alternating Copolymers . . . . .	462
a.	One of the monomers contains fluorine . . . . .	462
	(1). Poly(tetrafluoroethylene- <u>alt</u> -isobutylene) . . . . .	462
	(2). Poly(tetrafluoroethylene- <u>alt</u> -propylene) . . . . .	463
	(3). Poly(tetrafluoroethylene- <u>alt</u> -alkyl vinyl ether) . . . . .	464
	(4). Poly(chlorotrifluoroethylene- <u>alt</u> -isobutylene) . . . . .	465
	(5). Poly(chlorotrifluoroethylene- <u>alt</u> -propylene) . . . . .	466
	(6). Poly(methyl- $\alpha$ -fluoroacrylate- <u>alt</u> -styrene) . . . . .	467
	(7). Poly( $\alpha$ -trifluoromethacrylonitrile- <u>alt</u> -styrene) . . . . .	468
	(8). Poly(hexafluoroacetone- <u>alt</u> -ethylene) . . . . .	468
	(9). Poly(hexafluoroacetone- <u>alt</u> -2-methyl-1-pentene) . . . . .	469
b.	Both monomers contain fluorine . . . . .	469
	(1). Poly(tetrafluoroethylene- <u>alt</u> -trifluoronitrosomethane) . . . . .	469
	(2). Poly(tetrafluoroethylene- <u>alt</u> -1,2-difluoroethylene) or syndi- oregic-polytrifluoroethylene . . . . .	470
	(3). Poly(methyl- $\alpha$ -fluoroacrylate- <u>alt</u> -fluorostyrene) . . . . .	471
	(4). Poly(methyl- $\alpha$ -fluoroacrylate- <u>alt</u> - $p$ -fluorostyrene) . . . . .	472
4.	Statistical Copolymers . . . . .	474
a.	One of the monomers contains fluorine . . . . .	474
	(1). Poly(tetrafluoroethylene- <u>co</u> -ethylene) . . . . .	474
	(2). Poly(tetrafluoroethylene- <u>co</u> -isobutylene) . . . . .	474
	(3). Poly(tetrafluoroethylene- <u>co</u> -propylene) . . . . .	474
	(4). Poly(trifluoroethylene- <u>co</u> -isobutylene) . . . . .	475
	(5). Poly(chlorotrifluoroethylene- <u>co</u> -isobutylene) . . . . .	475
	(6). Poly(chlorotrifluoroethylene- <u>co</u> -propylene) . . . . .	477
	(7). Poly( $\alpha$ -fluorostyrene- <u>co</u> -methyl acrylate) . . . . .	477
	(8). Poly( $\alpha$ -fluorostyrene- <u>co</u> -methyl methacrylate) . . . . .	479
	(9). Poly( $p$ -methyl- $\alpha,\beta,\beta$ -trifluorostyrene- <u>co</u> -styrene) . . . . .	480
	(10). Polypentafluorostyrene- <u>co</u> -styrene) . . . . .	480
	(11). Poly( $\alpha$ -methylpentafluorostyrene- <u>co</u> -styrene) . . . . .	480
b.	Both monomers contain fluorine . . . . .	481
	(1). Poly(tetrafluoroethylene- <u>co</u> -vinylidene fluoride) . . . . .	481
	(2). Poly(tetrafluoroethylene- <u>co</u> -hexafluoropropylene) . . . . .	481
	(3). Poly(tetrafluoroethylene- <u>co</u> -perfluoroalkyl trifluorovinylether) . . . . .	482
	(4). Poly(vinylidene fluoride- <u>co</u> -hexafluoropropylene) . . . . .	482
	(5). Poly(vinylidene fluoride- <u>co</u> -1-bromo-2,2-difluoroethylene) . . . . .	484
	(6). Poly(vinylidene fluoride- <u>co</u> -1-chloro-2,2-difluoroethylene) . . . . .	484
	(7). Poly(vinylidene fluoride- <u>co</u> -trifluoroethylene) . . . . .	485
	(8). Poly(vinylidene fluoride- <u>co</u> -chlorotrifluoroethylene) . . . . .	485
	(9). Poly(vinylidene fluoride- <u>co</u> -perfluoroalkyl trifluorovinylether) . . . . .	487
	(10). Poly(vinylidene fluoride- <u>co</u> -hexafluoroacetone) . . . . .	487

5.	Terpolymers . . . . .	488
a.	Terpolymers of tetrafluoroethylen with olefins . . . . .	488
b.	Poly( <i>p</i> -methyl- $\alpha,\beta$ -trifluorostyrene- <i>ter</i> - $\alpha$ -methyl pentafluoro- styrene- <i>ter</i> -styrene) . . . . .	489
c.	Poly(tetrafluoroethylene- <i>ter</i> -vinylidene fluoride- <i>ter</i> -hexafluoropropylene) .	489
d.	Poly(tetrafluoroethylene- <i>ter</i> -vinylidene fluoride- <i>ter</i> -trifluoromethyl trifluorovinyl ether) . . . . .	490
6.	Fluorine Containing Polydienes . . . . .	491
a.	Poly(2-methyl-1,1,4,4-tetrafluorobutadiene) . . . . .	491
b.	Polyperfluorobutadiene . . . . .	491
7.	Polymers with Fluorine-Containing End Groups . . . . .	492
8.	<sup>19</sup> F-NMR Studies on Chemically Modified Polymers . . . . .	493
9.	Miscellaneous Polymers . . . . .	494
a.	Fluorine-containing polyurethanes . . . . .	494
b.	Polymers and copolymers of perfluoroaromatics and related monomers . .	494
c.	Poly(vinylidene fluoride- <i>co</i> -perfluoromethacryloyl fluoride) . . . . .	495
10.	Conclusions . . . . .	495
