Robust Parsing Using Multiple Construction-Specific Strategies (J.G. Carbonell and P.J. Hayes)	1
1 Introduction	1
2 Construction-Specific Flexible Parsing	3
2.1 Problems with a Rigid Uniform Grammar	3
2.2 The Need for Case Constructions	4
3 The Representation of Ambiguity and Focused Interaction	5
3.1 Focused Error Recovery	6
3.2 Representing Case-Filler Ambiguity	7
3.3 Representing Structural Ambiguity	8
4 Limited-Domain Language Definition	9
4.1 Compiling Descriptions into Linear Patterns	10
4.2 Direct Interpretation of Case Descriptions	12
5 Parsing Data Base Queries and Updates	12
5.1 The Non-Uniformity Problem	13
5.2 Unifying Update and Query Representations	14
5.3 Benefits of the Construction-Specific Approach	15
6 The CASPAR Parser	16
6.1 The Two CASPAR Strategies	17
6.2 Error-Tolerant Parsing	17
6.3 The CASPAR Algorithm	18
7 The DYPAR Parser	20
7.1 The Objectives of the DYPAR Approach	20
7.2 Parsing Strategies in DYPAR	21
7.3 A Sample DYPAR Dialogue	22
8 Combining the Strengths of CASPAR and DYPAR	23
8.1 A Multi-Strategy Algorithm	24
8.2 Flexible Error-Recovery Mechanisms	27
8.3 Advantages of the Multi-Strategy Approach	28
8.4 A Review of Principal Parsing Strategies	29

Knowledge-Based Parsing (J. G. Neal and S. C. Shapiro)		
		49
1	Introduction	49
1.1	Overview	49
1.2	Fundamental Assumptions	51
1.3	Declarative Knowledge Representation in an Integrated Knowledge Base	51
1.4	System Overview	52
1.5	Knowledge Representation Techniques	54
1.6	Core Knowledge and the Kernel Language	56
1.7	Metalanguage Conventions and Symbols	56
2	Core Knowledge and Representations	57
2.1	Uniform Representation and Intensional Constructs	57
2.2	Predefined Categories, Objects, Relations, Functions	57
2.2.1	Predefined Categories	57
2.2.2	Predefined Objects	59
2.2.3	Predefined Relations	59
2.2.4	Predefined Functions	60
2.3	The Reading Function	60
2.4	The Representational Mapping	62
2.4.1	Introduction	62
2.4.2	Base Cases	62
2.4.3	Propositions and Structured Objects	64
2.4.4	Participants in Propositions or Relations; Components of Structured Objects	64

2.5	Kernel Language	65
2.5.1	Predefined Terms	65
2.5.2	Syntactic Rewrite Rules	65
2.5.3	Semantic Rewrite Rules	67
2.6	Use in Language Processing	70
3	Increasing the System's Language Capability Through Its Language Capability	74
3.1	Motivation	74
3.2	Defining More-General Rule Forms	74
3.3	Parsing Strategy	75
3.4	Interpretation of the Input Rule Statement	81
4	Language Use-Mention Distinction	85
5	Summary	86
	Appendix: Chronological Summary of Input to the System as Presented in This Chapter	88

**Using Declarative Knowledge for Understanding Natural
Language (J. Pitrat) 93**

1	Introduction	93
2	The Knowledge	95
2.1	Lexicographic Knowledge	95
2.1.1	The Words	96
2.1.2	The Ending Sequences	96
2.1.3	The Conjugations	96
2.2	Syntactic Knowledge	98
2.2.1	Syntactic Markers	98
2.2.2	Graphs	98
2.2.3	The "Traits"	100
2.2.4	The Agreement Rules	101
2.2.5	The Conjunctions	101
2.2.6	Comparison Between This Formalism and ATN Grammars	102
2.3	The Semantic Knowledge	103
2.3.1	The Pattern Part of a Meaning	104
2.3.2	The Action Part of a Meaning	107
2.3.3	Meaning of the Symbols Which Are Not Words	108
2.4	Pragmatic Knowledge	109
3	The Interpreter	112
3.1	An Interpreter for Lexicographic Knowledge	113
3.2	The Main Interpreter	114

3.2.1 Building the Structure 115
 3.2.2 Using the Graphs Representing the Conjunctions 117
 3.2.3 Achieving the Building of the Structure 119
 3.2.4 Pruning the Structure 119
 3.3 The Interpreter of Pragmatic Knowledge 126
 3.4 The Implementation 131
 4 Discussion 132
 5 Conclusion 134
