

Contents

Chapter 1 – Introduction to SMT – Key issues 1

- Small package size advantages 5
- Leads on pad 5
- Manufacturability 6
- Thermal management 6
- Economics 6
- Japan dominance vs US leadership 7

Chapter 2 – Components and packages 9

- Major package ranges 11
- Simple packages 11
- Complex packages 17
- Miscellaneous packages for odd-form components 27
- Package selection 29
- Package availability 35
- Component delivery formats 35
- Component standardisation 36
- Packaging trends 41

Case study – Implementing a surface mount facility 49

Chapter 3 – SMT compatible PCBs 53

- Board size 55
- Board layer count, line width and spacing 57
- Through-holes and via usage 57
- Electrical properties and materials selection 62
- Alternative substrate materials 67
- Additive PCB masking 69
- Board surface quality control 71
- Board manufacturing tolerances 72

Case study – Assembly solutions for defence electronics 77
– Advanced packaging at Signal Processors 78

Chapter 4 – SMT circuit design 81

- Electrical advantages 83
- Footprint design and solderability 85
- Detailed footprint dimension selection 89
- Footprint considerations for complex packages 90
- Track and via design 92
- Routability 94
- Thermal management 96
- Design for testability 96
- Design for manufacturability 99
- Computer-aided design 99

Case study – Surface mount technology:
The manufacturing viewpoint 103

Chapter 5 – Surface mount processes	109
Board populating options with SMT	111
Board make-up options	115
Flexible automation in SMT	118
Where are the problems?	120
Selecting adhesives	120
Component and board preparation	123
Chapter 6 – Characterisation of SMT assembly equipment	127
Simple vs complex SMC packages	131
Placement methods	133
Machine configurations	134
Throughput	134
SMC placement machine flexibility	135
Placement accuracy	138
Case study – SMT ‘just-in-time’ at Philips	139
Chapter 7 – Selected placement equipment	145
Low-throughput machines	148
Medium-throughput machines	154
High-throughput machines	158
Mass placement machines	162
Robot-based placement	163
Case study – Precision surface mount assembly	165
Chapter 8 – Soldering	171
Wave soldering	173
Dual-wave soldering	174
Vapour-phase reflow soldering	175
Infrared reflow soldering	178
Other soldering techniques	179
Available equipment	179
Solder paste selection	185
Cleaning	187
Conductive epoxy materials	188

Chapter 9 – Test, rework and inspection management **191**

- Design for testability 193
- In-circuit test fixtures 194
- Test probes 197
- Special-circuit self-test and partitioning options 197
- The T-circuit 198
- Hierarchical interconnection technology 199
- Automated vision inspection 200
- Rework 203

- Case study – Quality and automation at Rank Xerox 207

Chapter 10 – Implementing excellence in SMT **211**

- Constraints of automation 213
- High-yield assemblies 216
- Trends in SMT penetration 218
- Excellence in assembly 219
