0	<i>Introduction: Starting Point, Objectives, and Content</i>	1
0.1	Starting Point and Objectives	1
0.2	Content	5
Part I. Environmental Protection		9
1	<i>An Introduction to Dynamic Models of the Environment</i>	11
1.1	The Relationships Between the Ecosystem and Its Economic Subsystem	12
1.2	Some Approaches to the Dynamic Analysis of the Use of the Environment	16
1.2.1	The Environment as a Source of Resources	17
1.2.1.1	The Optimal Use of a Non-Renewable Resource	17
1.2.1.2	The Optimal Use of a Renewable Resource	20
1.2.2	The Environment as a Recipient of Pollutants and as a Supplier of Public Goods	23
1.2.2.1	The Accumulation of Pollutants	24
1.2.2.2	An Optimization Model	26
1.2.3	Environmental Models with Capital Accumulation	29
1.2.3.1	Natural Purification	30
1.2.3.2	Recycling	34
2	<i>A Disaggregated Environment-Capital Model</i>	38
2.1	The Basic Model	40
2.1.1	The Technology	40
2.1.2	The Environmental Sector	44

2.1.2.1	The Transformation of Emissions into Pollutants: The Diffusion Function	44
2.1.2.2	The Effects of Pollutants on the Flow of Environmental Goods: The Damage Function	46
2.1.3	The Allocative Effects of Marginal Changes in the Production Program	47
2.2	Extending the Model	53
2.2.1	A Capital Good in the Waste Treatment Sector	54
2.2.1.1	The Technology	54
2.2.1.2	Optimality Conditions	55
2.2.2	Emissions in the Consumption Sector	59
2.2.3	The Case of Several Pollutants with Centralized Waste Treatment	61
2.2.3.1	The Assignment of Waste Treatment Costs	61
2.2.3.2	Private and Social Aspects of the Assignment of Waste Treatment Costs and of Environmental Damage	63
2.2.4	Local and Central Waste Treatment Measures	66
	<i>Appendix: Constraints and Optimality Conditions for the Environmental Protection Model with Capital Formation in the Waste Treatment Sector</i>	68
Part II. Entropy and the Use of the Environment		71
3	<i>The Notion of Entropy</i>	77
3.1	Thermodynamics	77
3.2	Energy, GIBBS' Fundamental Equation, Intensive and Extensive Quantities	79
3.3	An Example of Entropy: The Diffusion of Gases	83
3.4	The Second Law of Thermodynamics	87
3.5	The Irreversibility of Economic Processes and the Impossibility of the Land of Cockaigne	91
3.6	Negative Flow of Entropy	93
3.7	Entropy, Order, and Information	96
3.8	Using the Entropy Approach to Characterize the Environment as a Recipient of Pollutants	97
3.8.1	Entropy and Equilibrium	98
3.8.2	The Entropy Approach as a Means of Determining Deviations from Equilibrium	100
3.9	A First Attempt to Employ Entropy as a Variable in a Pollution Function	101

4	<i>Using the Entropy Approach to Characterize the Environment as a Supplier of Resources</i>	104
4.1	Resource Concentration and Factor Requirements in the Extraction of Resources	105
4.1.1	The Separation Process as a Reversal of the Diffusion Process	105
4.1.2	The Change in Entropy as a Function of Resource Concentration	107
4.1.3	The Energy Requirements in the Extraction Process	112
4.1.4	Factor Input in Resource Extraction	115
4.2	The Change in Entropy in the Environmental Sector as a Result of Resource Extraction	119
4.3	The Limits of Our Approach	124
	<i>Appendix: Value Charts for Section 4.1.2 (Numerical Tables for the Relationship Between the Mol-Specific Change in Entropy and Resource Concentration)</i>	125
Part III. The Use of Scarce Resources with Decreasing Resource Concentration		127
5	<i>The Integration of the Resource Problem into a Disaggregated Capital Model</i>	131
5.1	The Structure of the Model	131
5.1.1	The Resource Sector	133
5.1.2	Resource Quantities and Concentrations in the Environmental Sector	136
5.2	The System of Constraint Equations	139
6	<i>Replacement of Techniques over Time</i>	144
6.1	The Transition from Technique T_1 to Technique T_2 and Its Effects on the Economic System	145
6.1.1	A Schema of Replacement Processes in the Resource Model	145
6.1.2	The Effects of Replacement Processes in the Resource Model on the Major Economic Variables	147

6.2	Necessary Conditions for the Replacement of Techniques	152
6.3	Optimality Conditions	155
6.4	Interpreting the Optimality Conditions	157
6.4.1	Model Variant I	157
6.4.2	Model Variant II	163
	<i>Appendix: Derivation of Shadow Prices of Model Variant II</i>	164
 Part IV. Environmental Protection and Resources		171
7	<i>Interdependencies Between Environmental Protection and Resource Use Exemplified for Recycling and Deposition</i>	173
7.1	Optimal Resource Use and Environmental Protection in an Environment-Resource Model	174
7.1.1	The Model	174
7.1.2	Optimality Conditions	177
7.2	Interdependencies Between Environmental Protection and Resource Use with Recycling and Deposition	180
7.2.1	Recycling in the Environment-Resource Model	181
7.2.2	Allocative Aspects of Recycling	184
7.2.3	Deposition as a Support for Recycling	190
7.3	How Can We Avoid Wasting Low Entropy?	193
7.4	Outlook	195
8	<i>References</i>	196
9	<i>Subject Index</i>	203
