Preface VII

Scope XI

Prologue XIII

1. Introductory Concepts 1

1.0 Introduction 1

1.1 Constitutive Equations 1

1.2 Stress 5

1.3 Strain and Rate of Strain 9

1.4 Purely Elastic Linear Response 13

1.4.1 Single-Plane Symmetry 16

1.4.2 Three-Plane Symmetry or Orthotropy 17

1.4.3 Axisymmetry, or Transverse Isotropy 19

1.4.4 Isotropy 21

1.4.4.1 The Generalized Hooke's Law and the Elastic Moduli 23

1.4.4.2 The Generalized Hooke's Law and the Elastic Compliances 28

1.5 Purely Viscous Linear Response 30

1.5.1 The Generalized Newton's Laws 30

1.6 Problems 32

References 34

2. Linear Viscoelastic Response 35

2.0 Introduction 35

2.1 Linear Time-dependent Behavior 37

2.1.1 Differential Representations: The Operator Equation 39

2.1.2 Integral Representation. The Boltzmann Superposition Integrals 41

2.1.3 Excitation and Response in the Transform Plane 43

2.2 The Impulse Response Functions 44

2.3 The Step Response Functions 47

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.4 The Slope Response Functions 51
2.5 The Harmonic Response Functions 55
2.6 Excitation and Response in the Time Domain 63
2.7 Problems 66
References 68

3. Representation of Linear Viscoelastic Behavior by Series-Parallel Models 69
3.0 Introduction 69
3.1 The Theory of Model Representation 69
3.1.1 The Elements of Electric Circuit Analysis 70
3.1.2 The Elements of Mechanical Model Analysis 72
3.2 Electromechanical Analogies 77
3.3 The Elementary Rheological Models 80
3.3.1 The Spring and Dashpot Elements 81
3.3.2 The Maxwell and Voigt Units 82
3.4 Models with the Minimum Number of Elements 88
3.4.1 The Standard Three- and Four-Parameter Series-Parallel Models 88
3.4.1.1 The Models of the Standard Linear Solid 89
3.4.1.2 The Models of the Standard Linear Liquid 93
3.4.2 The Non-Standard Three- and Four-Parameter Series-Parallel Models 96
3.4.2.1 The Non-Standard Three-Parameter Models 97
3.4.2.2 The Non-Standard Four-Parameter Models 99
3.4.3 Other Four-Parameter Models 101
3.4.4 Behavior of the Standard Models in the Complex Plane. Initial and Final Values 103
3.4.5 Response of the Standard Models to the Standard Excitations 110
3.5 Models with Large Numbers of Elements 118
3.5.1 The Generalized Series-Parallel Models 119
3.5.1.1 The Wiechert and Kelvin Models 119
3.5.1.2 Spectral Strength and Time Dependence in Wiechert and Kelvin Models 127
3.5.1.3 The Canonical Models 134
3.5.2 Non-Standard Series-Parallel Models 134
3.5.3 Non-Series-Parallel Models with Large Numbers of Elements . 135
3.6 Model Fitting 136
3.6.1 Procedure X 136
3.6.2 Collocation Method 137
3.6.3 Multidata Method 143
3.6.4 Algorithm of Emri and Tschoegl 145
3.7 Series-Parallel Models and the Operator Equation 145

3.8 Problems 149
References 156

4. Representation of Linear Viscoelastic Behavior by Spectral Response Functions 157
4.0 Introduction 157
4.1 The Continuous Spectral Response Functions 158
4.1.1 Continuous Time Spectra 158
4.1.2 Continuous Frequency Spectra 163
4.1.3 Determination of the Continuous Spectra 169
4.2 Methods for Deriving the Continuous Spectra from the Step Responses 170
4.2.1 The Transform Inversion Method: The Approximations of Schwarzl and Staverman 170
4.2.2 The Differential Operator Method 176
4.2.3 The Power Law Method: The Approximations of Williams and Ferry 180
4.2.4 The Finite Difference Operator Method: The Approximations of Yasuda and Ninomiya, and of Tschoegl 181
4.3 Methods for Deriving the Continuous Spectra from the Harmonic Responses 191
4.3.1 Differential Operator Method: The Approximations of Schwarzl and Staverman, and of Tschoegl 191
4.3.1.1 Approximations Derived from the Storage Functions 192
4.3.1.2 Approximations Derived from the Loss Functions ... 200
4.3.2 The Transform Inversion Method 204
4.3.3 The Power Law Method: The Approximations of Williams and Ferry 207
4.3.4 The Finite Difference Operator Method: The Approximations of Ninomiya and Ferry, and of Tschoegl 210
4.3.4.1 Approximations Derived from the Storage Functions 210
4.3.4.2 Approximations Derived from the Loss Functions ... 215
4.4 Comparison of the Approximation to the Continuous Spectra 220
4.5 The Discrete Spectral Response Functions 224
4.6 The Viscoelastic Constants 229
4.7 Problems 237
References 243

5. Representation of Linear Viscoelastic Behavior by Ladder Models 244
5.0 Introduction 244
5.1 General Ladder Models 244

5.2 Regular Ladder Models with a Finite Number of Elements: The Gross-Marvin Models 249
5.2.1 The Respondances of the Gross-Marvin Models 250
5.2.2 The Equivalent Series-Parallel Models 254
5.2.2.1 Limit Values 254
5.2.2.2 Poles and Residues 256
5.2.2.3 Respondances 259
5.3 Regular Ladder Models with a Finite Number of Elements: The Regular Converse Ladder Models 262
5.3.1 The Respondances of the Regular Converse Ladder Models .. 263
5.3.2 The Equivalent Series-Parallel Models 266
5.4 Comparison of the Obverse and Converse Regular Ladder Models. Model Fitting 267
5.5 Regular Ladder Models with an Infinite Number of Elements 270
5.5.1 The Extended Gross-Marvin Models 270
5.5.2 The Extended Marvin-Oser Model 276
5.5.3 The Extended Regular Converse Ladder Model 282
5.5.4 Other Extended Regular Ladder Models 283
5.6 The Continuous Ladder or Material Transmission Line 286
5.6.1 The Continuous Gross-Marvin Ladder or Inertialess Material Transmission Line 287
5.6.2 The Material Transmission Line with Inertia 293
5.6.2.1 The Lossless Line 295
5.6.2.2 The Lossy Line 300
5.7 Problems 307
References 313

6. Representation of Linear Viscoelastic Behavior by Mathematical Models 314
6.0 Introduction 314
6.1 Modelling by the Use of Matching Functions 315
6.1.1 Matching Functions of the Z- and S-Type 317
6.1.2 Matching Functions of the Λ-Type 322
6.1.3 Modelling of the Experimental Response Functions 326
6.1.3.1 The Step Responses 326
6.1.3.2 The Slope Responses 330
6.1.3.3 The Harmonic Responses 331
6.1.4 Modelling of the Respondances 333
6.1.4.1 Harmonic Response Models from Respondance Models 333
6.1.4.2 Step Response Models from Respondance Models ... 337
6.2 Models Based on Fractional Differentiation (Power Laws) 338
6.3 Modelling of the Spectral Response Functions 342

6.3.1 Direct Modelling 342
6.3.1.1 The Box Distribution 343
6.3.1.2 The Wedge and Associated Power Law Distribution . 346
6.3.2 Spectra Derived from Models for the Experimental Responses 355
6.3.2.1 Spectra Derived from Models for the Step Responses 356
6.3.2.2 Spectra Derived from Models for the Harmonic Responses 357
6.4 Problems 361
References 363

7. Response to Non-Standard Excitations 365
7.0 Introduction 365
7.1 Response to the Removal or the Reversal of a Stimulus 366
7.1.1 Creep Recovery 366
7.1.2 Response to the Removal of a Constant Rate of Strain 370
7.1.3 Response to the Reversal of Direction of a Constant Rate of Strain 376
7.2 Response to Repeated Non-Cyclic Excitations 377
7.2.1 Staircase Excitations 378
7.2.2 Pyramid Excitations 380
7.3 Response to Cyclic Excitations 380
7.3.1 Non-Steady-State Response 382
7.3.2 Steady-State Response 385
7.3.2.1 In Terms of the Spectral Response Functions 385
7.3.2.2 In Terms of the Harmonic Response Functions 387
7.4 Approximations to the Spectra from Responses to Non-Standard Excitations 391
7.5 Problems 392
References 395

8. Interconversion of the Linear Viscoelastic Functions 396
8.0 Introduction 396
8.1 Interconversion Between Relaxation and Creep Response Functions . 399
8.1.1 Interconversion Between the Respondances 399
8.1.2 Interconversion Between the Harmonic Responses 400
8.1.3 Interconversion Between the Step Responses 401
8.1.3.1 Theoretical Interrelations 401
8.1.3.2 Numerical Evaluation of the Convolution Integrals .. 403
8.1.3.3 Empirical Interconversion Equations 406
8.1.4 Interconversion Between the Spectral Functions 407
8.1.4.1 Theoretical Interrelations 407
8.1.4.2 Approximate Interconversion 409

8.1.4.3 Approximate Calculation of the Spectra from the Step Responses 410
8.2 Interconversion Between Time- and Frequency-Dependent Response Functions 413
8.2.1 Theoretical Interrelations 413
8.2.2 Interconversions Requiring Numerical Integration 417
8.2.3 Interconversion by Kernel Matching 418
8.2.4 Empirical Interconversion Equations 425
8.3 Interconversion Within the Frequency Domain 425
8.3.1 Relations Between the Real and Imaginary Parts of the Harmonic Response Functions 426
8.3.1.1 The Kronig-Kramers Relations 426
8.3.1.2 Approximations to the Kronig-Kramers Relations ... 430
8.3.1.3 Using Mathematical Models 433
8.3.2 Relations Between the Absolute Modulus or Compliance and the Loss Angle 435
8.4 Problems 439
References 441

9. Energy Storage and Dissipation in a Linear Viscoelastic Material 443
9.0 Introduction 443
9.1 Strain Excitation (Stress Relaxation Behavior) 445
9.1.1 Step Response 448
9.1.2 Slope Response 450
9.1.3 Harmonic Response 452
9.2 Stress Excitation (Creep Behavior) 460
9.2.1 Step Response 463
9.2.2 Slope Response 464
9.2.3 Harmonic Response 466
9.3 Hysteresis 471
9.3.1 Response to Harmonic Excitations 472
9.3.2 Response to Triangular Excitations 475
9.3.2.1 Single Cycle Response 476
9.3.2.2 Steady-State Response 482
9.4 Problems 484
9.5 References 488

10. The Modelling of Multimodal Distributions of Respondance Times 489
10.0 Introduction 489
10.1 Bimodal Distributions 490
10.1.1 Series-Parallel Models 491

10.1.2 Models for the Spectral Response Functions 493
10.1.3 Ladder Models 494
10.1.4 Mathematical Models 496
10.2 Prolongated Unimodal Distributions 500
10.2.1 Series-Parallel Models 501
10.2.2 Models for the Spectral Response Functions 502
10.2.3 Ladder Models 503
10.2.4 Mathematical Models 506
10.3 Problems 507
References 507

11. Linear Viscoelastic Behavior in Different Modes of Deformation 508
11.0 Introduction 508
11.1 The General (Anisotropic) Viscoelastic Stress-Strain Relations 508
11.1.1 The Correspondence Principle 508
11.1.2 The General Stress-Strain Relations 512
11.2 The Isotropic Viscoelastic Stress-Strain Relations 513
11.2.1 The Viscoelastic Generalized Hooke's Laws 513
11.2.2 The Viscoelastic Generalized Newton's Laws 514
11.3 Linear Viscoelastic Behavior of Isotropic Materials in Different Modes of Deformation 515
11.3.1 Behavior in Shear 516
11.3.2 Behavior in Isotropic Compression 517
11.3.3 Behavior in Constrained Uniaxial Compression 523
11.3.4 Behavior in Uniaxial Tension and Compression 525
11.3.5 Lateral Contraction (Poisson's Ratio) 528
11.3.6 Wave Propagation 532
11.3.6.1 Wave Propagation in an Extended Medium 533
11.3.6.2 Wave Propagation in a Bounded Medium 536
11.4 Interconversion of the Isotropic Response Functions in Different Modes of Deformation 537
11.4.1 Behavior in Shear from Measurements in Uniaxial Tension Including Lateral Contraction 539
11.4.1.1 Exact Interconversion 539
11.4.1.2 Numerical Interconversion 541
11.4.1.3 Approximate Interconversion 542
11.4.2 Behavior in Bulk from Measurements in Uniaxial Tension and in Shear 542
11.4.3 Behavior in Bulk from Measurements in Uniaxial Constrained Compression and Shear 543
11.4.4 Behavior in Bulk from Measurements in Uniaxial Tension or Compression Including Lateral Contraction or Dilatation 543

11.4.4.1 Exact Interconversion 543
11.4.4.2 Numerical Interconversion 544
11.5 Problems 544
References 548

Appendix: Transformation Calculus 549
A1 Introduction 549
A2 Special Functions 550
A2.1 The Delta Function 551
A2.2 The Step Function 554
A2.3 The Gate Function 556
A2.4 The Slope Function 558
A2.5 The Ramp Function 559
A3 The Laplace Transform 560
A3.1 Properties 560
A3.1.1 Linearity 561
A3.1.2 Uniqueness 561
A3.1.3 Translation 561
A3.1.4 Real Differentiation 561
A3.1.5 Real Integration 562
A3.1.6 Real Convolution 563
A3.1.7 Limit Values 563
A3.1.8 Cut-off. The Finite Laplace Transform 564
A3.1.9 Repetition 564
A3.2 Inversion 565
A3.2.1 The Residue Theorem 565
A3.2.2 Inversion on the Real Axis 568
A3.3 Laplace Transform Pairs 568
A3.4 The s-Multiplied Laplace Transform (Carson Transform) 570
A4 The Fourier Transform 570
A4.1 Properties 571
A4.2 Inversion 571
A4.3 Generalized Fourier Transforms 573
A4.4 Generalized Fourier Transform Pairs 574
A5 The Stieltjes Transform 574
A5.1 Properties 575
A5.2 Inversion 575
A5.2.1 The Jump 575
A5.2.2 Inversion on the Real Axis 577
A5.3 The Fourier-Laplace Transform 580
A5.4 Stieltjes Transform Pairs 581

A 6 The Hilbert Transform 581
A 6.1 Inversion 582
