

# Contents

<b>Chapter I</b>	<b>Elements of Material Structure and Solid Dynamics</b>	<b>1</b>
1.1	Dynamic response of solids	1
1.2	Structure of materials	2
1.3	Continuum and microstructure	6
1.4	Deformations	9
1.5	Stresses	12
1.6	Conservation laws	13
1.7	Hooke's law	16
1.8	Absorption and viscoelasticity	19
1.9	Piezoelectricity and other coupled phenomena	21
1.10	Variational theorems	25
1.11	Wave front and wave classification	27
1.12	Conditions across discontinuity	29
1.13	Characteristics and hyperbolicity	32
1.14	Energy flux	34
1.15	Basic concepts of waves. Debye's frequency	35
1.16	Group and signal velocities	38
1.17	Causality and general relations for linear systems	41
	Problems	43
	References and additional reading	45
<b>Chapter II</b>	<b>Bulk Waves in Isotropic Media</b>	<b>46</b>
2.1	Modes and velocities of elastic waves	46
2.2	Vector representation and wave potentials	49
2.3	Wave motion in curvilinear coordinates and separability	51
2.4	Plane waves	53
2.5	Cylindrical waves	55
2.6	Spherical waves	59
2.7	Radiation from a cylindrical cavity	62
2.8	Radiation from a rigid embedded cylinder. Radiation damping	64
2.9	Radiation from a spherical cavity. Remarks on radiation conditions	66
2.10	Radiation from a rigid embedded sphere. Imperfect bonding	67
2.11	Multipoles, resonances, and related considerations	72
2.12	Green's dynamic tensor	75

2.13	Energy transport in harmonic waves . . . . .	78
2.14	Viscoelastic waves. Spatial and temporal attenuation . . . . .	81
2.15	Viscoelastic pulse propagation. Wavefront velocity . . . . .	84
2.16	Radiation from a moving dislocation . . . . .	85
2.17	Creation of a dislocation dipole. Non-uniform motion . . . . .	87
2.18	Limitations of the linear theory. Shock waves . . . . .	89
	Problems . . . . .	92
	References and additional reading . . . . .	94
<b>Chapter III Bulk Waves in Anisotropic Media . . . . .</b>		<b>95</b>
3.1	Plane waves . . . . .	95
3.2	Effects of symmetry . . . . .	98
3.3	Pure modes in cubic systems . . . . .	100
3.4	General modes in cubic systems . . . . .	104
3.5	Energy velocity . . . . .	107
3.6	Waves in piezoelectric media . . . . .	109
3.7	Quasi-electrostatic approximation of piezoelectricity . . . . .	112
3.8	Modes in a piezoelectric cubic system . . . . .	114
3.9	Bulk wave piezoelectric transducer . . . . .	116
3.10	Generation of harmonic waves. Resonators . . . . .	118
3.11	Improved analysis of resonators . . . . .	120
3.12	Characteristic surfaces . . . . .	121
	Problems . . . . .	123
	References and additional reading . . . . .	124
<b>Chapter IV Boundary Effects and Waveguides . . . . .</b>		<b>125</b>
4.1	Reflection and mode conversion at free boundary . . . . .	126
4.2	Reflection at interface. Impedance matching . . . . .	129
4.3	Rayleigh waves in isotropic half-space . . . . .	131
4.4	Rayleigh waves in anisotropic half-space . . . . .	134
4.5	Love waves . . . . .	138
4.6	Interdigital transducer . . . . .	140
4.7	Waves in a plate. Cut-off frequencies . . . . .	142
4.8	Frequency spectrum of a plate . . . . .	144
4.9	Torsional waves in a cylinder . . . . .	147
4.10	Longitudinal waves in a cylinder . . . . .	149
4.11	Flexural waves in a cylinder . . . . .	151
4.12	Timoshenko beam theory . . . . .	153
4.13	Mindlin plate theory . . . . .	156
4.14	Normal modes of waveguides . . . . .	160
4.15	Forced motions via modal superpositions . . . . .	163
4.16	Acoustic emission in a rod . . . . .	167
4.17	Radiation from a moving load . . . . .	169
	Problems . . . . .	172
	References and additional reading . . . . .	173

Chapter V	<b>Wave-Obstacle Interactions.</b>	
	<b>Waves in Composites</b>	175
5.1	Wave-obstacle interactions	175
5.2	Dynamic stress concentrations	178
5.3	Scattering cross-sections	180
5.4	Diffraction by a sphere	184
5.5	Response of random composites	187
5.6	Effective scatterer approach	189
5.7	Composite sphere assemblage	191
5.8	A differential scheme	193
5.9	Response of polycrystals	195
5.10	Rigorous definitions of the effective response	198
5.11	Bounds for static moduli	200
5.12	Wave propagation in random composites	202
5.13	Causal approach of independent scatterers	204
5.14	Causal differential media	206
5.15	Waves in fiber composites. Typical dispersion curves	209
5.16	Waves in ordered systems. Atomic lattice	212
5.17	Waves in layered composites	216
	Problems	219
	References and additional reading	221
	<b>Comments on Selected Problems</b>	223
	<b>References</b>	229
