Preface V

1 Pattern Recognition and Self-organization in Biological Systems

Wolf Singer 1

1.1 A Developmental Approach to Complex Biological Systems . . . 1
1.2 Ocular Dominance Plasticity as an Example for Activity-dependent Self-organization 3
1.2.1 The Role of Postsynaptic Activation in Circuit Selection 3
1.2.2 The Role of Non-retinal Signals in Ocular Dominance Plasticity . . 5
1.2.3 Ca^{++}-ions as Possible Messengers for the Induction of Activity-dependent Modifications 7
1.2.4 The Chemical Nature of Permissive Gating Signals 8
1.3 Functional Implications of Ocular Dominance Plasticity 9
1.4 Self-organization and Learning 10
1.5 Towards the Development of Cooperatively Coupled Cell Assemblies 11
1.6 The Nature – Nurture Dichotomy 14
References 15

2 Pattern Recognition with Homogeneous and Space-variant Neuronal Layers

Hans Marko 19

2.1 Introduction 19
2.2 A General Scheme for Neuronal Signal Processing 21
2.3 The Formation of Sensory Layers as Feature Detectors 23
2.4 The Recognition of Simple Patterns with a Homogeneous Layer System 27
2.5 Discussion 29

Appendix
Man-Machine Comparison of Rotational Invariant Character Recognition
Ralph D. Tilgner 30

1 Introduction 30
2 Data Base 30
3 Recognition Processes 31
A. Bayesian Classifier 31
B. Homogeneous Layer System 32
C. Normalization of Rotation by Second-order Moments 34
D. Human Visual System 34
4 Comparison of Recognition Performance 36
5 Conclusions 36
References 37

3 Relational Processing: A Concept for the Explanation of Invariant Visual Pattern Recognition

Helmut Glünder 39

3.1 Preface 39
3.2 Introduction 39
3.3 Focus of Interest 41
3.4 Invariant Pattern Recognition 42
3.5 Perceptron-like Concepts 44
3.6 Generalized Autocorrelation Methods for the Evaluation of Inner Pattern Relations 50
3.7 Invariant Relational Features 56
3.8 Relational Features and Neural Circuits 63
3.9 Discussion 69
Acknowledgements 71
Appendix 72
References 73

4 Investigations of Visual Threshold Perception – Further Developments on the z-Model

Thomas Elsner 79

4.1 Introduction 79
4.2 Optimization of the Model to Transient Patterns 80
4.3 Modulation Transfer Function in Consideration of Saccadic Eye Movements 84

4.4	Visibility of Spatially One-dimensional Patterns	87
4.5	Two-dimensional Patterns	90
4.6	Discussion	92
	Appendix	93
	References	96

5 The Visual System as a Spatial Frequency Matched Filter

Gert Hauske 99

5.1	A Brief History of Multi-channel Concepts	99
5.2	The Matched Filter Concept	100
5.3	Grating Sensitivity Measurements and the Matched Filter Concept	101
5.4	Predictions from the Matched Filter Concept: Possibilities and Limitations	104
5.4.1	Threshold Modulation	104
5.4.2	Sensitivity Functions	107
5.5	Discussion	109
5.5.1	The Matched Filter Concept of Visual Detection	109
5.5.2	The Reduction of Grating Sensitivity as Pattern-selective Process	110
5.5.3	Matched Filters Obtained by Fine Tuning of Discrete Filter Units	111
5.5.4	The Matched Filter Concept Compared with Non-linear Models	112
5.6	Final Remarks	113
	Appendix 1	114
	Appendix 2	115
	References	116

6 The Programming of Visually Guided Saccades

Heiner Deubel, Gert Hauske 119

6.1	Introduction	119
6.2	The Role of Visual Input in Correction Saccade Programming	121
6.3	The Processing of Spatio-temporal Signals in Saccadic Programming	123
6.4	A Spatio-temporal Model of Saccadic Programming	126
6.5	Discussion	129
	Acknowledgement	131
	References	131

7 Contribution of Colour to Pattern Recognition

Rainer Röhler 133

7.1 Introduction: Pre-information, Hypothesis Formation and Pattern Recognition 133
7.2 The Detectability of Borderlines with Varying Amount of Pre-information about their Position 137
7.3 Border Detection or Area Integration? 140
7.4 Suprathreshold Stimuli: Local Adaptation, Eye Movements, and Perceptual Completion 146
7.5 A Cybernetical Model for the Role of Local Adaptation and Eye Movements in the Visual Process 150
7.6 Generalized Reafference Model for Colour Vision 153
7.7 Discussion 158
Acknowledgements 160
References 160

8 Pattern Discrimination in Normal and Abnormal Vision

Ingo Rentschler 163

8.1 The Problem 163
8.2 Amblyopic Processing of Positional Information 168
8.2.1 Vernier Acuity 168
8.2.2 Sensitivity to Phase Distortion 171
8.2.2.1 Compound Gratings 171
8.2.2.2 2D Phase Quantization 171
8.3 What is so Special about Foveal Vision? 175
8.3.1 Foveal and Peripheral Acuity in Infant Vision 175
8.3.2 Foveal versus Extrafoveal Processing in Rapid Pattern Discrimination 176
8.4 Conclusion 179
Acknowledgement 180
References 181

9 The Role of the Superior Colliculus for Programming Eye Movements

Wolfgang Fries, Ernst Pöppel 185

9.1 Introduction 185
9.2 Methods 187
9.3 Sensory and Motor Input to the Superior Colliculus 187

9.4 Functional Considerations 192
Acknowledgement 194
References 195

10 Feedback Mechanisms Controlling Skeletal Muscle Tone

Albrecht Struppler, Matthias T. Jahnke, Hermann Riescher 199

10.1 Introduction 199
10.2 Methods 201
10.3 Physical Fundamentals 202
10.4 Results 204
10.4.1 Differential Block 204
10.4.2 Interruption of the Tonic Feedback System on Medullary Level . . 204
10.4.3 Lesions of Proprioceptive Afferents at Thalamic-subthalamic Level 205
10.5 Discussion 209
References 214

11 The Information Processing Structure of the Subjective Vertical. A Cybernetic Bridge between its Psychophysics and its Neurobiology

Horst Mittelstaedt 217

Preface 217
11.1 Development of a Mathematical Theory 217
11.1.1 The Problem 217
11.1.2 Basic Experiments 219
11.1.3 Conclusions 223
11.1.4 Mathematical Formulation 226
11.2 Acquisition and Processing of Gravity Information 229
11.2.1 Neuronal Substrate 229
11.2.1.1 Somatoreceptors 229
11.2.1.2 Otolith Characteristics 232
11.2.1.3 Refined Formulation 235
11.2.2 Consequences 236
11.3 Verticalizing Effects of the Visual World 238
11.3.1 Visual Capture 238
11.3.2 Critical Experiments 239
11.3.3 Hypotheses and their Experimental Test 241
11.3.3.1 Vector Addition 241
11.3.3.2 Inclusion of Higher Order Components 242

11.3.4 Consequences 245
11.3.4.1 Dynamics of "Visual Capture" 245
11.3.4.2 The Shift of the Ordinate 247
11.3.4.3 Two Visual Processing Modes 247
11.4 The Information Processing Structure 249
11.4.1 Feedforward Hypotheses about the IPS 249
11.4.1.1 The Simplest Solution and its Test 249
11.4.1.2 An Alternative and its Test 251
11.4.2 The Comprehensive Solution 253
11.4.2.1 Component Generators 253
11.4.2.2 Open Questions 255
11.4.2.3 Neurophysiological Realization of the Visual Components 256
11.5 Conclusion 259
11.6 Appendix to Chapter 11.4.2.2 Last Paragraph 260
Acknowledgements 260
References 261

Biographical Notes 265
Participating Faculties and Institutes 265
Projects and their Leaders 266
List of Participants (1969–1983) 268
List of Contributors 271
