CONTENTS

Preface vii

PART I. BACKGROUND:
Environmental Regulations and Time in Economic Analysis

1 Introduction 3

1.1 Economic approaches to environmental problems 5
1.1.1 The role of prices 5
1.1.2 Instruments for environmental policy 6
1.2 Aims of the study 10
1.3 Plan of the study 13
1.4 Notes 16

2 Time, Production and Investment in Equilibrium Theory 19

2.1 Time and production 20
2.1.1 Production and physical irreversibility 21
2.1.2 The course of time in the production process 24
2.2 Recursive and intertemporal equilibrium approaches 27
2.2.1 Recursive models and myopic decisions 27
2.2.2 Intertemporal models and perfect foresight 29
2.2.3 Comparison of the two approaches 31
2.3 Activity analysis, equilibrium and irreversibility 32
2.3.1 Activity analysis, intertemporal and recursive equilibria 33
2.3.2 Economic irreversibility and incomplete markets 37
2.4 Summary 40
2.5 Notes 41

PART II. THEORY:
Environmental Externalities, Time and Adjustment in a Computable Equilibrium Framework

3	Effluent Standards in a Dynamic Multi-region Model	47
3.1	General assumptions and single period balances	50
3.1.1	Commodities	51
3.1.2	Single period demand-supply balances	52
3.2	Production and substitution of techniques	53
3.2.1	Technology sets or ex-ante production possibilities	57
3.2.2	Short-run production possibilities and decisions	58
3.2.3	Production techniques and investment decisions	61
3.3	Effluent standards and end-of-the-pipe emission treatment	66
3.4	Intertemporal consumption decisions	68
3.5	Summary	71
3.6	Notes	72
4	Existence of a Computable Long-run Equilibrium	74
4.1	An overview over the proof of existence	75
4.2	Demand and investment-functions	77
4.3	Existence of a computable long-run equilibrium	87
4.4	Notes	94

PART III. NUMERICAL APPLICATION:
Waste Water Treatment and Economic Adjustment

5	Solution Methods for Computable Equilibrium Models	101
5.1	Numerical solution methods: an overview	102
5.2	Fixed-point algorithms	105
5.3	Dimensionality reduction	109
5.4	Notes	110
6	Waste Water Treatment, Adjustment and Economic Development	112
6.1	A simplified version of the general framework	112
6.1.1	Disaggregation and single period constraints	113
6.1.2	Production, investment and adjustment	115

6.1.2.1 Ex-ante production possibilities 116
6.1.2.2 Ex-post production possibilities 117
6.1.2.3 Long-run adjustment and innovation 119
6.1.3 Waste water regulations and treatment 120
6.1.4 Intertemporal consumption choices 123
6.2 Numerical inputs and results 124
6.2.1 Numerical inputs and assumptions 124
6.2.2 Results and numerical output 130
6.3 Summary 138
6.4 Notes 138

7 Bibliography 141
