## PREFACE

<b>I. BASIC CONSTRUCTION AND MATERIALS PROPERTIES</b>	<b>1</b>
INTRODUCTION .....	1
THE CARBON LINING .....	4
Ramming pastes .....	4
Cathode blocks .....	7
Sidewall blocks .....	15
Ceramic sidewall materials .....	16
Carbon glues .....	19
REFRACTORIES AND INSULATION .....	21
Metallurgical alumina .....	27
Firebricks .....	27
Composite or sandwich insulation .....	27
Some properties of commercial refractory and insulation materials .....	29
High alumina bricks .....	29
Chamotte .....	30
Moler bricks .....	30
Calcium silicate .....	31
Vermiculite .....	31
DIFFUSION AND PENETRATION BARRIERS .....	32
Physical barriers .....	32
Chemical barriers .....	33
STEEL SHELLS AND CRADLES .....	34
INSTALLATION .....	36
Collector bar connection .....	36
Carbon lining installation .....	41
Installation of refractories and insulation .....	43
REFERENCES .....	44
<b>II. START AND OPERATION</b> .....	<b>47</b>
PREHEATING AND START-UP .....	47

Preheating methods .....	47
Ramming paste .....	49
Anode bake-out .....	49
Resistance preheating .....	49
Liquid metal .....	52
Indirect methods .....	56
GENERAL START-UP FEATURES .....	59
OPERATION .....	62
Temperature .....	62
Ledge formation .....	63
Potholes and cracks .....	63
Cathodic voltage drop .....	63
POTLIFE PREDICTION .....	72
REFERENCES .....	78
<b>III. CHEMICAL REACTIONS .....</b>	<b>79</b>
REACTIONS IN THE CARBON LINING .....	79
Oxidation of sideling .....	79
Formation of aluminium carbide .....	80
Abrasion .....	85
Combined mechanical and chemical erosion .....	86
Reactions within the carbon lining .....	86
REACTIONS IN REFRACTORIES AND INSULATION .....	95
Reactions with bath .....	95
Reaction with aluminium .....	97
Reactions in ceramic sidewall materials .....	98
REFERENCES .....	100
<b>IV. PHYSICAL CHANGES DURING CELL OPERATION .....</b>	<b>101</b>
THERMAL EXPANSION AND SHRINKAGE .....	101
Cathode blocks .....	101
Ramming paste .....	102
Collector bar and steel shell .....	105
Refractories and insulation .....	106

Electrical resistivity .....	108
Thermal conductivity .....	109
<b>CHEMICALLY INDUCED DIMENSIONAL CHANGES .....</b>	<b>111</b>
Sodium intercalation .....	111
Collector bar .....	115
<b>CATHODE HEAVING .....</b>	<b>115</b>
Vertical expansion gradients .....	116
Salt crystallization .....	117
Material conversion .....	118
Movement restraints .....	119
Cathode carbon strength .....	122
<b>REFERENCES .....</b>	<b>123</b>

<b>V. CHARACTERIZATION OF CATHODE MATERIALS .....</b>	<b>125</b>
<b>STANDARD CHARACTERIZATION OF .....</b>	<b>125</b>
<b>CARBONACEOUS MATERIALS</b>	
Survey of standard test methods .....	126
Sampling .....	128
Apparent density .....	130
Open porosity .....	131
Pyknometric density .....	131
Total porosity .....	132
Electrical resistivity .....	132
Thermal conductivity .....	134
Thermal expansion .....	135
Mechanical properties and geometry .....	135
Compressive strength .....	136
Tensile strength .....	137
Bending strength .....	137
Young's modulus .....	140
Ash content .....	142
Green apparent density .....	142
Binder content .....	143
Granulometry .....	143

STANDARD TESTS FOR REFRACTORIES AND .....	145
INSULATION	
Pyrometric cone equivalent (PCE) .....	145
Thermal conductivity .....	146
Load testing at elevated temperatures .....	147
Modulus of rupture (MOR) at elevated temperatures .....	150
Mineralogic identification .....	151
Chemical analysis .....	151
NON-STANDARD CHARACTERIZATION .....	152
Thermal expansion and shrinkage .....	153
Thermal conductivity at elevated temperatures .....	154
Thermal shock .....	156
Crack detection .....	158
Abrasion resistance of carbon during electrolysis .....	158
Aluminium carbide formation .....	161
Oxidation resistance of carbon .....	161
Expansion of carbon due to sodium penetration .....	161
Rate of sodium penetration in carbon .....	163
Chemical resistance of carbon towards sodium .....	164
Characterization of graphitization by X-ray diffraction .....	167
Characterization of graphitization by intercalation .....	169
Microscopy .....	171
High temperature strength testing .....	178
Compaction characteristics of ramming paste .....	179
Density control during installation .....	182
Nuclear magnetic resonance (NMR) .....	184
Baking loss .....	184
Penetration resistance of refractory and insulation .....	186
materials	
Fluoride vapour resistance of refractory and .....	188
insulation materials	
OVERVIEWS .....	189
Test methods .....	189
Compressive strength .....	191

Mechanical faults .....	191
Electrical resistivity .....	191
Thermal conductivity .....	191
Thermal expansion/shrinkage .....	191
Oxidation resistance .....	191
Chemical sodium resistance .....	191
Compaction tests .....	191
Selected properties for cathode materials .....	192
LIST OF ABBREVIATIONS .....	196
REFERENCES .....	198

<b>VI. CATHODE FAILURES .....</b>	<b>203</b>
<b>BOTTOM FAILURES .....</b>	<b>204</b>
Spalling .....	204
Excessive surface wear .....	206
Potholes .....	207
Seam mix shrinkage .....	209
Stratification .....	212
High transient temperatures .....	213
Bottom cracking .....	214
<b>STEEL SHELL .....</b>	<b>226</b>
Steel shell strength and stiffness .....	227
Shell repair .....	229
<b>SIDEWALL FAILURE .....</b>	<b>230</b>
Sidewall oxidation .....	230
Sidewall erosion .....	233
Sodium exfoliation .....	236
Heat transfer disruptions .....	238
<b>COMPLEX FAILURE SCENARIOS .....</b>	<b>238</b>
Metal penetration .....	238
Aluminothermic reactions .....	244
<b>TEMPORARY SHUTDOWN, POT RESTART AND .....</b>	<b>251</b>
<b>POT REPAIR .....</b>	<b>252</b>
Potlife reduction .....	252

Complete shutdown and restart procedures .....	253
Partial shutdown and restart procedures .....	255
Pot repair .....	255
REFERENCES .....	257
<b>VII. SPENT POTLINING DISPOSAL .....</b>	<b>259</b>
<b>SPENT POTLINING MATERIAL .....</b>	<b>259</b>
Background .....	259
Handling of SPL .....	262
Watering reactions .....	264
<b>TREATMENT OF SPL .....</b>	<b>266</b>
Slag and metal additives in iron- and steel industry .....	266
Fuel supplement in cement manufacture .....	267
Fluidized-bed combustion .....	270
Gypsum sheating process .....	271
Leaching/leachate treatment process .....	272
Cryolite regeneration process .....	274
AlF <sub>3</sub> reclamation process .....	276
Pyrohydrolysis .....	277
Pyrosulpholysis .....	279
<b>ALUMINIUM CELL ANODE ADDITIVES .....</b>	<b>282</b>
REFERENCES .....	284
<b>VIII. NEW TRENDS AND DEVELOPMENTS .....</b>	<b>287</b>
INTRODUCTION .....	287
CHOICE OF CARBON MATERIALS .....	288
GLUING .....	288
INERT NON-CONDUCTING MATERIALS .....	289
MATHEMATICAL MODELS .....	289
INERT CATHODES .....	289
A CLOSED DIMENSIONALLY STABLE CELL .....	292
REFERENCES .....	294
