

Table of Contents

1 Exchange and Superexchange	1
1.1 The Exchange Interaction	1
1.2 Anderson's Theory	3
1.3 Molecular Orbital Exchange Models	9
1.4 Quantitative MO Calculations of Singlet-Triplet Splitting	15
2 Spin Hamiltonians	20
2.1 The Spin Hamiltonian Approach	20
2.2 The Magnetic Spin-Spin Interaction	22
2.3 The Exchange Contribution	27
2.4 Biquadratic Terms	34
2.5 Justification of the Spin Hamiltonian Formalism	34
2.6 Exchange Involving Degenerate States	38
2.7 Exchange in Mixed Valence Species	42
3 Spectra of Pairs	48
3.1 The Spin Hamiltonian for Interacting Pairs	48
3.2 Spin Levels in the Strong Exchange Limit	49
3.3 Spectra of Pairs in the Strong Exchange Limit	57
3.4 Spin Levels in the Weak Exchange Limit	66
3.5 Spectra of Pairs in the Weak Exchange Limit	74
3.6 Intermediate Exchange	77
4 Spectra of Clusters	86
4.1 The Spin Hamiltonian for Oligonuclear Systems of Interacting Spins	86
4.2 Spin Levels of Exchange Coupled Clusters in the Strong Exchange Limit	87
4.2.1 Spin Levels of Trinuclear Clusters	91

4.2.2 Spin Levels of Tetranuclear Clusters	93
4.2.3 Spin Levels of Linear Clusters.	99
4.3 EPR Spectra of Exchange Coupled Clusters in the Strong Exchange Limit	100
4.3.1 EPR Spectra of Trinuclear Clusters.	106
4.3.2 EPR Spectra of Tetranuclear Clusters.	113
5 Relaxation in Oligonuclear Species	121
5.1 Introduction.	121
5.2 Theoretical Basis of Spin Relaxation in Pairs	121
5.3 Iridium (IV) Pairs.	125
5.4 Copper Pairs	130
5.5 Two-Iron-Two-Sulfur Ferredoxins.	131
5.6 Relaxation in Larger Clusters	132
6 Spectra in Extended Lattices.	135
6.1 Exchange and Dipolar Interactions in Solids	135
6.2 Exchange Narrowing.	139
6.3 Additional Broadening Mechanisms	150
6.4 Exchange Narrowing in Lower Dimensional Systems	155
6.4.1 The Effect of Weak Interchain Coupling.	158
6.4.2 Half-Field Transitions.	160
6.4.3 Temperature Dependence of the Spectra.	162
6.4.4 Frequency Dependence of the Line Widths	165
7 Selected Examples of Spectra of Pairs	167
7.1 Early Transition Metal Ion Pairs.	167
7.2 Copper Pairs	173
7.3 Heterometallic Pairs.	182
7.4 Organic Biradicals	187
8 Coupled Transition-Metal Ions-Organic Radicals	193
8.1 Introduction.	193
8.2 Nitroxides Directly Bound to Metal Ions	193
8.3 Weak Exchange with Nitroxides	200
8.4 Semiquinones.	203

9 Biological Systems	210
9.1 Introduction	210
9.2 Copper Proteins	210
9.3 Iron Proteins.....	214
9.3.1 Iron Porphyrins and Heme Proteins.....	215
9.3.2 Iron-Sulfur Proteins.....	217
9.3.3 Sulfite Reductase.....	222
9.3.4 Nitrogenase.....	223
9.3.5 Iron-Binding Proteins Without Cofactors or Sulfur Clusters	224
9.4 Exchange-Coupled Species in the Photosynthetic O ₂ -Evolving Complexes	227
10 Low Dimensional Materials	235
10.1 Linear Chain Manganese(II)	235
10.2 Linear Chain Copper(II)	239
10.3 Two-Dimensional Manganese(II).....	246
10.4 Two-Dimensional Copper(II).....	247
11 Excitons	253
11.1 Introduction.....	253
11.2 Excitons.....	253
11.3 EPR of Triplet Excitons in Linear Organic Radical Systems	255
Appendix A. Second Quantization.	266
Appendix B. Properties of Angular Momentum Operators and Elements of Irreducible Tensor Algebra .	272
B.1 Properties of Angular Momentum Operators	272
B.2 Addition of Two Angular Momenta. Clebsch-Gordon Coefficients and “3j” Symbols	272
B.2.1 Definitions	272
B.2.1.1 Equivalent Definitions	273
B.2.1.2 Phase Convention and Properties	273
B.2.1.3 The “3J” Symbols.....	273
B.2.2 Methods of Calculations	274
B.2.2.1 Special Formulae	275

B.3	The “6j” Symbols and the Racah W Coefficients. . .	275
B.3.1	Definitions	275
B.3.2	Properties.	276
B.3.3	Methods of Calculation	277
B.3.3.1	Special Formulae	277
B.4	The “9j” Symbols	278
B.4.1	Definition	278
B.4.2	Properties.	279
B.4.3	Special Formulae	279
B.5.	Irreducible Tensor Operators.	280
B.5.1	Definitions	280
B.5.1.1	Compound Irreducible Tensor Operators	280
B.5.1.2	Tensor Product of Two First-Rank Irreducible Tensor Operators.	281
B.5.2	Properties of Irreducible Tensor Operators	282
B.5.3	Reduced Matrix Elements of Special Operators. . .	283
