

# Contents

## *Chapter 1*

### Respiratory Gas Tensions in the Environment

*R. G. Boutilier*

1	Introduction .....	1
2	Natural Variations in Environmental Gas Tensions .....	1
3	Animals in Secluded Environments: Impact on Ambient Gas Tensions .....	6
4	Concluding Remarks .....	10
	References .....	10

## *Chapter 2*

### Modeling of Gas Exchange in Lungs, Gills and Skin

*J. Piiper*

1	Introduction .....	15
2	Gas Exchange in Steady State .....	16
3	Gas Exchange in Unsteady State .....	30
	References .....	41

## *Chapter 3*

### Recent Advances and Trends in the Comparative Morphometry of Vertebrate Gas Exchange Organs

*S. F. Perry*

1	Introduction .....	45
2	Models .....	47
3	Methods .....	48
4	Skin .....	50
5	Fish Gills .....	51
6	Lungs .....	55
7	Symmorphosis Revisited .....	61
8	Summary and Perspectives .....	62
	References .....	65

*Chapter 4*

## Morphometric Analysis of Tissue Capillary Supply

*S. Egginton*

1	Introduction .....	74
2	Practical Considerations .....	76
3	0- and 1-D Indices .....	80
4	Linear Analyses .....	95
5	Planar Analyses .....	105
6	The Role of Capillaries in Oxygen Transport to Tissue .....	132
	References .....	136

*Chapter 5*Hemoglobin Physiology in Vertebrate Animals:  
a Cautionary Approach to Adaptationist Thinking*R. M. G. Wells*

1	Introduction .....	143
2	Universal Patterns of Organization in Hemoglobin Structure ..	145
3	Pitfalls for Molecular Adaptationists .....	145
4	Hemoglobin Multiplicity and Polymorphism .....	146
5	Purpose and Design for Optimizing Strategies .....	148
6	Non-Standard Oxygen-Binding Curves .....	149
7	The Environment-Organism Problem .....	151
8	Fine Tuning to Meet Specific Environmental Challenge or Non-Adaptive OEC? .....	152
9	Hemoglobin Ontogeny and the Functionalist/Structuralist Dichotomy .....	155
10	Conclusions .....	157
	References .....	158

*Chapter 6*

## Kinetics of Oxygen and Carbon Dioxide Exchange

*E. R. Swenson*

1	Introduction .....	163
2	Oxygen Exchange .....	168
3	Carbon Dioxide Exchange .....	181
	References .....	198

*Chapter 7*

Acid-Base Regulation:  
 Interrelationships Between Gaseous and Ionic Exchange  
*N. Heisler*

1	Introduction .....	211
2	Equilibria Between Gaseous and Nonvolatile Components of Buffer Systems .....	213
3	Transfer from the Site of Production to the Site of Elimination .....	218
4	Elimination of Ammonia and CO <sub>2</sub> from the Body Fluids . . . .	227
5	Accumulation of Volatile Metabolic End Products .....	238
6	Concluding Remarks .....	246
	References .....	246

*Chapter 8*

Control and Co-Ordination of Gas Exchange in Water Breathers  
*D. Randall*

1	Introduction .....	253
2	Oxygen Transfer .....	254
3	Carbon Dioxide Transfer .....	256
4	Ammonia Transfer .....	258
5	Interactions Between Carbon Dioxide and Ammonia Excretion .....	259
6	Sites of Control of Gas Transfer .....	262
7	Control Systems .....	263
8	Gill Diffusing Capacity .....	272
9	Blood Flow .....	273
	References .....	274

*Chapter 9*

Control and Co-Ordination of Gas Exchange in Bimodal Breathers  
*R. G. Boutilier*

1	Introduction to Bimodal Systems .....	280
2	Structural Adaptations for Bimodal Gas Exchange .....	282
3	Respiratory Gas Transfer .....	287
4	Co-Ordination of Aquatic and Aerial Breathing .....	294
5	Diving: Alternate Storage and Utilization of Oxygen .....	303
6	Ventilation-Perfusion Relationships in Bimodal Systems .....	311
7	Regulation of Dual Gas Transfer Systems .....	321
8	Concluding Remarks .....	335
	References .....	336

---

*Chapter 10***Control and Co-Ordination of Gas Exchange in Air Breathers***W.K. Milsom*

1	Introduction .....	347
2	Central Rhythm Generators .....	348
3	Feedforward and Feedback Control .....	352
4	Homeostatic Regulation .....	390
	References .....	391
	 <i>Subject Index</i> .....	 401
