Part A. Methodology

1 Culture Systems and Selection Procedures	3
<i>Hamish A. Collin and Philip J. Dix</i>	
1.1 Introduction	3
1.2 Selection Strategies	4
1.2.1 Resistance Selection	4
1.2.2 Visual Selection	5
1.2.3 Counterselection	5
1.2.4 Total Selection	5
1.2.5 Micromanipulation	5
1.3 <i>In vitro</i> Culture Systems	6
1.3.1 Callus Cultures	6
1.3.2 Cell Suspension Cultures	8
1.3.3 Plated Cell Suspensions	10
1.3.4 Protoplasts	12
1.3.5 Differentiated Cultures	14
1.4 Concluding Remarks	16
1.5 References	17
2 <i>In vitro</i> Mutagenesis	19
<i>Ioan Negrutiu</i>	
2.1 Introduction	19
2.2 DNA Lesion Induction by Various Classes of Mutagens	20
2.2.1 Radiation Types	21
2.2.1.1 X-Rays	21
2.2.1.2 Gamma-Rays	21
2.2.1.3 Neutrons	22
2.2.1.4 UV Radiation	22
2.2.1.5 Parameters of Radiation Sensitivity	23
2.2.1.6 Cytological Effects	24
2.2.1.7 Elements of Radiobiology and Dosimetry	24
2.2.2 Chemical Mutagens	25
2.2.2.1 Base Analogues	25
2.2.2.2 Alkylating Agents	25
2.2.2.3 Sodium Azide	27
2.2.2.4 Practical Aspects of Application	28
2.2.3 Chemical versus Physical Mutagens	29
2.2.4 New Sources of Variability	29

2.3	Plant Material, Mutations and Mutation Rates	30
2.3.1	The Plant Material	30
2.3.2	Mutations	31
2.3.3	Mutation Rates	34
2.4	DNA-Repair Processes	35
2.5	References	37
3	Flow Cytometry for Selection of Plant Cells <i>in vitro</i>	39
	<i>Andrew Lister</i>	
3.1	Introduction	39
3.1.1	What is Flow Cytometry?	39
3.1.2	Applications to Plant Systems	40
3.2	Technical Aspects	41
3.2.1	Basics of Flow Cytometry	41
3.2.1.1	Fluidics	42
3.2.1.1.1	Dual Liquid Flow Nozzles	43
3.2.1.1.2	Hydrodynamic Focussing	44
3.2.1.1.3	Sheath and Sample Fluids	44
3.2.1.1.4	Hydrostatic Pressure Variations	46
3.2.1.1.5	Nozzle Sizes	47
3.2.1.2	Optics	47
3.2.1.2.1	Illumination Sources	47
3.2.1.2.2	Illumination Optics	48
3.2.1.2.3	Scatter and Fluorescence	48
3.2.1.2.4	Detectors and Colour Discrimination	49
3.2.1.2.5	Non-Imaging Limitations	49
3.2.1.2.6	Other Measurable Parameters	51
3.2.1.3	Electronics	51
3.2.1.3.1	Amplification	51
3.2.1.3.2	Digitization and Storage	52
3.2.1.3.3	Signal Processing	52
3.2.1.3.4	Thresholds and Event Recognition	53
3.2.1.3.5	Histogram Storage and Display	53
3.2.1.3.6	Histogram Statistics	54
3.2.1.3.7	List Mode Multiparametric Data	56
3.2.1.4	Alignment	56
3.2.2	Sorting	57
3.2.2.1	Sort Definition	57
3.2.2.1.1	Target Definition and Sort Windows	57
3.2.2.1.2	Bitmap Sorting	57
3.2.2.1.3	Selectivity Index	58
3.2.2.2	Electrostatic Sorting	59
3.2.2.2.1	Droplet Generation and Viewing	59
3.2.2.2.2	Droplet Charging and Deflection	59
3.2.2.2.3	Sample Collection	60
3.2.2.2.4	Timing and Phase Control	60
3.2.2.2.5	Prolonged Sort Stability	61

3.2.2.3	Sort Optimization	61
3.2.2.3.1	Maximizing Sort Rate	64
3.2.2.3.2	Maximizing Sort Recovery	64
3.2.2.3.3	Maximizing Sort Purity	65
3.2.2.4	Sterile Sorting	66
3.2.2.4.1	Basic Approaches and Problems	66
3.2.2.4.2	Triple Sheath Fluid Technique	67
3.2.2.4.3	Sterile Sample Collection	67
3.2.2.5	Fluidic Switching	68
3.2.2.5.1	Comparison with Electrostatic Sorters	69
3.2.2.5.2	Sterility and Suitability for Large Particles	70
3.3	Applications	70
3.3.1	General Considerations	71
3.3.1.1	Autofluorescence	71
3.3.1.2	Exogenous Labelling	71
3.3.2	Protoplast Sorting	73
3.3.2.1	Special Operational Requirements	73
3.3.2.2	Heterokaryon Sorting	74
3.3.2.2.1	Labelling	74
3.3.2.2.2	Characterization	77
3.3.2.2.3	Viable Sort Efficiency	80
3.3.2.2.4	Sort Purity and Pseudo-Heterokaryons	80
3.3.2.3	Rare Phenotype Selection	81
3.3.3	DNA Techniques	82
3.3.3.1	Cell Cycle Analysis and Ploidy Screening	82
3.3.3.2	Chromosome Sorting and Transformation	82
3.3.4	Further Applications	83
3.4	References	83
4	Micromanipulation of Higher Plant Cells	87
	<i>German Spangenberg, Gunther Neuhaus and Ingo Potrykus</i>	
4.1	Introduction	87
4.2	Individual Culture of Higher Plant Cells	88
4.2.1	History: Methods and Achievements	88
4.2.2	Selection of Defined Plant Cells: Setup	90
4.2.3	Individual Cell Culture and Applications	92
4.3	Micromanipulation of Higher Plant Cells: Methods and Results	96
4.3.1	Microfusion: One-to-One Electrofusion of Defined Pairs of Protoplasts	97
4.3.2	Transfer of Partial Genomes: Microfusion of Defined Combinations of Protoplasts and Subprotoplasts	100
4.3.3	Gene Transfer via Microinjection of DNA into Protoplasts and Karyoplasts	102
4.3.4	Microinjection of DNA into Microspore-Derived Embryoids	106
4.4	Summary	107
4.5	References	108

Part B. Selection of Variants of Agricultural and Industrial Interest

5	<i>In vitro</i> Selection for Disease Resistance	113
	<i>Peter W. Jones</i>	
5.1	Disease Resistance in Plants	113
5.1.1	Plant Pathogens	113
5.1.2	Host Disease Resistance	113
5.1.2.1	Mechanisms of Resistance	113
5.1.2.2	Genetics of Resistance	114
5.1.2.3	Pathogen Resistance in Disease Control	114
5.2.	Breeding for Disease Resistance	115
5.2.1	Limitations of Conventional Breeding	115
5.2.2	Induced Mutagenesis	116
5.3	<i>In vitro</i> Selection of Disease Resistant Variants	117
5.3.1	Production of the Variant Population	117
5.3.2	Operation of Selection	119
5.3.2.1	<i>In vitro</i> Selection for Pathogen Resistance	120
5.3.2.1.1	Selection Using Obligate Fungal Parasites	120
5.3.2.1.2	Selection Using Viruses	121
5.3.2.1.3	Selection Using Facultative Parasites	122
5.3.2.2	<i>In vitro</i> Selection for Toxin-Resistance	125
5.3.2.3	<i>In vitro</i> Selection for the Expression of Specific Disease Resistance Mechanisms	136
5.3.3	Analysis of Selected Regenerants	137
5.4	Application of <i>in vitro</i> Selection in the Development of Disease Resistant Varieties	140
5.5	Conclusions	142
5.6	References	143
6	Herbicide Resistance	151
	<i>Wendy A. Smith and Roy S. Chaleff</i>	
6.1	Introduction	151
6.2	Herbicide Resistance Mutants	155
6.2.1	Picloram	155
6.2.2	Paraquat	156
6.2.3	Amitrole	157
6.2.4	Sulfonylureas	158
6.2.5	Imidazolinones	160
6.2.6	Triazines	161
6.3	Considerations	162
6.3.1	Critical Parameters	162
6.3.2	Genetic Analysis	163

6.3.3	Limitations of <i>in vitro</i> Selection	163
6.3.4	Alternative Approaches	164
6.4	References	165

7 Environmental Stress Resistance..... 167

Murray W. Nabors

7.1	Introduction	167
7.2	Constraints in Obtaining Stress-Tolerant Plants from Cell Cultures	168
7.2.1	Individual Constraints	168
7.2.2	Discussion of Constraints	171
7.3	The Theoretical Basis for Using Tissue Culture to Obtain Plants with Increased Tolerance to Environmental Stress	173
7.3.1	Obtaining Stress-Tolerant Cell Cultures	173
7.3.2	Problems Encountered	173
7.3.3	Important Variables	174
7.3.4	Strategies for Imposing Stress	175
7.3.5	Methods at Colorado State University	176
7.3.6	Alternative Strategies to Somatic Cell Selection	177
7.3.7	Care of Regenerated Plants	177
7.3.8	Greenhouse Testing	178
7.3.9	Constraints Slowing Use of Tissue Culture Selection	179
7.4	Selection Methods for Specific Stresses	179
7.5	Current Progress in Selecting for Specific Stress Resistances	181
7.5.1	Tolerance to Specific Salts	181
7.5.2	Proline as a Selective Marker for NaCl Tolerance	183
7.5.3	Tolerance to Drought	183
7.5.4	Tolerance to Aluminium	183
7.5.5	Tolerance to Temperature Extremes	184
7.5.6	Correlations between Salt Tolerance and PEG Tolerance	184
7.6	References	185

8 Screening and Selection of Cultured Plant Cells for Increased Yields of Secondary Metabolites..... 187

Graham Wilson

8.1	Introduction	187
8.2	Methods	188
8.2.1	Plant Cell Suspensions	188
8.2.2	Screening Methods	188
8.2.3	The Formation of Clones from Single Cells	189
8.3	Growth and Production Kinetics of Plant Cell Cultures	191
8.3.1	The Complexities of the Batch Culture Growth Cycle	191
8.3.2	Factors Determining the Accumulation of Metabolites by Cells	192
8.4	Origins of the Culture	193
8.4.1	Selecting the Plant	193

8.4.2	Selecting the Explant	195
8.5	Heterogeneity	196
8.5.1	Screening for Chemical Variants	197
8.5.2	Sources of Variation	198
8.5.3	Cloning, Clonal Analysis and the Stability of Isolates	199
8.5.4	The Origins of Cellular Heterogeneity	204
8.5.5	Possible Links between Sources of Culture Variation, Screening Methods and Stability	206
8.6	Selection by Analogue Resistance	207
8.6.1	Regulation of Secondary Metabolic Pathways	207
8.6.2	The Use of Tryptophan Analogues in Selection	209
8.6.3	Application of Selection Methods	210
8.7	Outlook	211
8.8	References	211

Part C. Cell Selection in Relation to Genetic Manipulation

9	Selection and Choice of Genetic Markers	217
	<i>Ioan Negrutiu</i>	
9.1	Introduction	217
9.2	Selectable Markers - Classes and Molecular Basis	218
9.2.1	Resistance to Amino Acid(s) and Amino Acid Analogues	219
9.2.2	Resistance to Herbicides	221
9.2.3	Resistance to Nucleic Acid Base Analogues	221
9.2.4	Resistance to Antibiotics	222
9.2.5	Other Resistant Mutants	222
9.3	The Specificity of Selection	223
9.4	Expression of Selected Traits at the Plant Level	223
9.5	Exploitation of Selectable Markers in Genetic Manipulation Experiments	225
9.5.1	Selectable Markers in Fusion Experiments	225
9.5.2	Problems with Mutated Genes as Selectable Markers	225
9.5.3	Cloned Genes as Selectable Markers	226
9.5.4	Selectable Markers in Gene Transfer and Cloning	227
9.5.4.1	Gene Rescue Experiments	228
9.5.4.2	Metabolic Complementation by Heterologous Transformation	228
9.6	Conclusions	228
9.7	References	229

10	Auxotrophic, Temperature-Sensitive and Hormone Mutants Isolated <i>in vitro</i>	233
	<i>François Phythoud and Patrick J. King</i>	
10.1	Introduction	233
10.2	Nutritional Mutants	234
10.2.1	Amino Acid, Vitamin and Purine Auxotrophs	234
10.2.2	Nitrate Reductase Deficient Mutants	234
10.3	Temperature-Sensitive Mutants	242
10.4	Hormone Mutants	244
10.4.1	Selection <i>in planta</i> or <i>in vitro</i> ?	244
10.4.2	Auxin Resistance <i>in vitro</i>	244
10.4.3	Auxin and Cytokinin Requirements of Tissue Cultures	245
10.4.4	Auxin Auxotrophs	247
10.4.5	Temperature-Sensitive Auxin Auxotrophs	248
10.4.6	Cytokinin Mutants	248
10.5	Variation in Development	250
10.5.1	The Genetics of Morphogenesis <i>in vitro</i>	250
10.5.2	Developmental Mutants	250
10.6	References	252
11	Selection of Somatic Hybrids	257
	<i>Yuri Y. Gleba and Leonid R. Shlumukov</i>	
11.1	Introduction	257
11.2	Genetic Complementation	258
11.2.1	Chlorophyll Deficient Mutants	261
11.2.2	Auxotrophic Mutants	262
11.2.3	Resistances to Antibiotics, Herbicides and Antimetabolites	263
11.2.4	Fusion Involving "Universal Somatic Hybridizers" as One Parent	264
11.3	Selection Methods Based on Physiological Complementation	266
11.4	Selection Procedures Based on Parental Cell Inactivation	271
11.4.1	Iodoacetate Treatment	273
11.4.2	Irradiation	274
11.5	Mechanical Selection	276
11.5.1	Mechanical Isolation of Visually Identified Heterokaryons and their Individual Culture	276
11.5.2	Fusion of Preselected Protoplasts (Subprotoplasts) Followed by Cloning of Reconstituted Cells in Microdroplets of a Nutrient Medium	279
11.6	Physical Enrichment of Hybrid Cells	279
11.7	References	281

12 Selection and Analysis of Cytoplasmic Hybrids	287
<i>Péter Medgyesy</i>	
12.1 Introduction	287
12.1.1 Limits of Sexuality	287
12.1.2 Breeder's Views	288
12.1.3 Advent of Protoplast Fusion	289
12.1.4 Towards Ultimate Segregation	291
12.2 Tools and Principles in Cybrid Selection	291
12.2.1 Selectable Cytoplasmic Mutations	291
12.2.1.1 Chloroplast Mutants	291
12.2.1.2 Mitochondrion Mutants	294
12.2.2 Inactivation of Undesired Genomes	295
12.2.2.1 Protoplast Inactivation	295
12.2.2.2 Nucleus Inactivation	296
12.2.2.3 Organelle Inactivation	297
12.2.3 Creation of Heterogeneous Cytoplasms	298
12.2.3.1 Protoplast Fusion	298
12.2.3.2 Organelle Uptake	298
12.2.3.3 Direct Organelle Manipulation	299
12.3 Production and Analysis of Selected Cybrids	299
12.3.1 New Combinations of Subcellular Genomes	299
12.3.1.1 New Nucleus-Chloroplast Combinations	299
12.3.1.2 New Nucleus-Mitochondrion Combinations	301
12.3.1.3 New Chloroplast-Mitochondrion Combinations	302
12.3.2 Genetic Recombinants of Organelles	303
12.3.2.1 Chloroplast Recombinants	303
12.3.2.2 Mitochondrion Recombinants	307
12.3.2.3 Interorganelle Recombinants	309
12.3.3 Prospects in Organelle Transformation	309
12.3.3.1 Transformation of Chloroplasts	309
12.3.3.2 Transformation of Mitochondria	310
12.4 References	311
13 Selection of Transformed Cells	317
<i>Keith Lindsey and Michael G.K. Jones</i>	
13.1 Introduction	317
13.2 Factors which Influence the Frequency of Transformation Events	318
13.2.1 <i>Agrobacterium</i> -Mediated Gene Transfer	318
13.2.1.1 Density of Bacterial Inoculum and Duration of Cocultivation	320
13.2.1.2 Strain of <i>Agrobacterium</i>	321
13.2.1.3 Plant Genotype and Tissue Inoculated	322
13.2.1.4 Feeder Layers	323
13.2.2 Direct Gene Transfer	323
13.2.2.1 Exogenous DNA Concentration and Type	325
13.2.2.2 Protoplast Physiology: Cell Cycle Effects	325
13.3 Factors which Influence the Ease of Selection of Transformed Tissues ..	326

13.3.1	Selection and Screening Procedures	326
13.3.1.1	Selectable Genes	326
13.3.1.2	Screenable Genes	329
13.3.2	Levels of Gene Expression	333
13.3.2.1	Gene Structure and Organisation	333
13.3.2.2	Gene Copy Number and Position Effects	335
13.3.2.3	Targeting of the Gene Product	335
13.4	Factors which Influence the Recovery of Healthy Transformed Plants ...	336
13.5	Conclusions	337
13.6	References	337
 Index		 341
