

Contents

1	Introduction	1
1.1	General Remarks	1
1.2	Problem Analysis	1
1.3	The Most Important Commands	3
2	Formulas	9
2.1	Introduction to Computer Languages	9
2.2	Line Numbers in BASIC	12
2.3	Correcting Programs	13
2.4	Description of Variables	13
2.5	First BASIC Elements to Program Formulas	14
2.6	The Notation of Numbers	16
2.7	Arithmetic Expressions	17
2.8	Built-in Standard Functions	19
2.9	Unconditional Program Jumps	20
2.10	The Direct Mode	22
2.11	Area of a Triangle From the Length of the Three Sides	23
2.12	Calculation of the Mean Free Path of Gas Molecules	27
2.13	Maxwell's Distribution Law of Velocities	29
2.14	Planck's Law for Black Body Radiation	33
2.15	Conversion of Degree Celsius into Degree Fahrenheit	35
2.16	Diffusion Potential of Electrolyte Solutions	36
2.17	Effusion Velocity of a Gas	38

3	Series	41
3.1	Geometric Series	42
3.2	Fourier Series	44
3.3	Heat Transfer According to the Second Fourier Law	47
3.4	Partition Functions	49
3.5	Monte-Carlo Method to Calculate the Archimedes Number	53
4	Loops	57
4.1	The Calculation of Sums	57
4.2	The Compilation of Tables — Molecular Velocity	63
4.3	Mean Values and Standard Deviation	67
4.4	Monte-Carlo Integration	70
4.5	Molecular Formulas of a Chemical Compound From the Elemental Analysis	76
4.6	Conditional Branching	78
4.7	Molecular Formulas From High Resolution Mass Spectrometry	80
5	Integration	87
5.1	Integration According to Euler	88
5.2	Calculation of the Circumference of an Ellipse	97
5.3	Simulation of the Sequence of a Copolymer	100
5.4	Integration According to Simpson	106
5.5	Integrations with Termination Criteria	109
5.6	Specific Molar Heat of Metals According to Debye	114
5.7	Calculation of the Virial Coefficient From a Known Intermolecular Potential	116
6	Equations	125
6.1	The Bisection Method	126
6.2	Newton's Method	136
6.3	Regula Falsi or Secant Method	140
6.4	Thermoelectric Voltage of a Ni-CrNi-Thermocouple	146

6.5	The Persistence Length of a Polymer Molecule	149
6.6	Calculation of the Binary Distillation	152
6.7	The pH-Value of a Weak Acid	157
6.8	Iterative Methods	164
7	Arrays	167
7.1	Sorting of Numbers and Words	170
7.2	Monte-Carlo Calculation of First Order Kinetics	175
7.3	Multiplication of Two Square Matrices	178
7.4	Algebra of Complex Numbers	181
7.5	Bragg's Scattering Angle of X-Ray Diffraction	185
7.6	Simulation of a Gas-Chromatographic Column	194
7.7	Linear Regression	197
7.8	Linear Regression with Error Estimation	203
7.9	Mass Distribution of the Molecular Peak	207
8	Linear Systems	213
8.1	Subroutines	214
8.2	Systems of Linear Equations	218
8.3	General Linear Regression	228
8.4	Inversion of a Square Matrix	241
8.5	Determination of Eigenvalues of a Matrix	250
8.6	Calculation of the Number of Isomers	256
9	Differential Equations	265
9.1	The Euler-Cauchy Method	267
9.2	The Improved Euler-Cauchy Method	274
9.3	The Runge-Kutta Method	279
9.4	The Euler Method for Systems of Differential Equations	284
9.5	The Runge-Kutta Method for Systems of Differential Equations	290
9.6	Boundary Value Problems	299
9.7	The Harmonic Oscillator — an Eigenvalue Problem	306

Contents

9.8	Partial Differential Equations	312
9.9	Stationary Solutions of Partial Differential Equations	321
10	Interpolation	329
10.1	The Interpolation Routine of Lagrange	329
10.2	Interpolation with Spline Functions	334
11	Nonlinear Systems	343
11.1	Nonlinear Systems of Equations	343
11.2	Nonlinear Regression	359
12	Non-Numerical Data Processing	401
12.1	Generation of an ODE-System From a Reaction Mechanism	402
12.2	A Computer Game	412
12.3	The Game of Life	419
13	Computer Graphics	431
13.1	Graphical Games	434
13.2	Linear Regression with Graphics	437
13.3	Differential Equations Using Graphs	443
13.4	3-D-Graphics	462
13.5	Contour Plots	470
14	Data Acquisition and Data Handling	479
14.1	Data Acquisition	480
14.2	Quick Sorting of Data	487
14.3	Splines with Regression	493
14.4	Stiff Differential Equations	510
15	Programs in Pascal	523
	General Index	701
	BASIC Index	711
	Program Index	713
	BASIC and PASCAL diskettes attached to inside back cover
