I CELLULAR AND MOLECULAR BIOLOGY OF THE NORMAL ARTERIAL WALL

1 Endothelial and Smooth-Muscle Cells

<i>I. Hüttner, O. Kocher and G. Gabbiani</i>	3
Structure of the Normal Arterial Wall	3
The Endothelial Cell	3
Biological Behaviour and Morphology of Endothelial Cells	4
Functional Properties of Vascular Endothelium	10
The Smooth-Muscle Cell	15
Biological Behaviour of Smooth-Muscle Cells	15
Functional Morphology of Vascular Smooth Muscle	18
Interactions Between Endothelial and Smooth-Muscle Cells	28
Communication Between Endothelial and Smooth-Muscle Cells Mediated Via Humoral Mechanisms	28
Communication Between Endothelial and Smooth-Muscle Cells Mediated Via Direct Cell-to-Cell Contacts	29
References	30

2 Extracellular Matrix of the Arterial Vessel Wall

<i>L. Robert and P. Birembaut</i>	43
Collagens	43
Biochemistry	43
Morphology	45
Elastin	46
Biochemistry	46
Morphology	48
Proteoglycans	49
Biochemistry	49
Morphology	50
Structural Glycoproteins	50
Biochemistry	50
Morphology	52
General Arrangement of Extracellular Matrix of the Vascular Wall	52
References	53

3 Organogenesis of the Arterial Wall

<i>C. L. Berry</i>	55
Structural Organization of Vessel Walls	56
Early Development of the Circulation	56
Structural Organization of the Arterial Wall	57
Static Mechanics	60
Scleroproteins in the Aortic Wall	61
Developmental Implications	63
Arterial Wall Nutrition	66
Exceptional Areas in Vascular Development	66
Ductus Arteriosus	66
Coarctation	67
Coronary Vessels and Vascular Cushions	68
Conclusions	68
References	68

4 Age-Related Morphological Changes of the Arterial Wall

<i>H. Bouissou, M. T. Pieraggi and M. Julian</i>	71
"Elastic"-Type Arteries	71
"Muscular"-Type Arteries	75
Assessment of Ageing of the Arterial Wall	76
References	77

5 Effects of "Ageing" on Arterial Cells In Vitro

<i>Monique Breton and J. Picard</i>	79
Introduction	79
Cell Culture Techniques	79
Smooth-Muscle Cells	79
Endothelial Cells	80
Growth of Arterial Cells	80
Smooth-Muscle Cells	80
Endothelial Cells	81
Growth Factors and the Proliferation of Arterial Cells	81
Metabolic Activities of Arterial Cells	83
Glycosaminoglycans and Proteoglycans	83
Fibrous Proteins: Collagen and Elastin	85
Low-Density Lipoproteins	85
Conclusion	86
References	86

6 Structural Modifications of the Arterial Wall in Hypertension

<i>J.-B. Michel, J. L. Salzmann and M. Safar</i>	91
Introduction	91
Structural Modifications of the Arterial System as a Consequence of Hypertension	91
Structural Modifications of the Arterial Wall as a Result of High Blood Pressure	93
Complications: Lacunes and Atherosclerosis	93
Effect of Treatment	94
Similarity Between the Ageing Process and Hypertension in the Arterial Wall	94
References	95

7 Adrenergic and Non-adrenergic Neural Control of the Arterial Wall	
<i>K. K. Dhital and G. Burnstock</i>	97
Introduction	97
Structure of the Vascular Neuroeffector Junction.....	97
Pattern of Perivascular Innervation	98
Development and Regeneration of Perivascular Innervation	99
Adrenergic Nerves	100
Cholinergic Nerves	100
Non-adrenergic, Non-cholinergic Nerves	102
Purinerbic Nerves	102
Aminergic Nerves	103
Peptidergic Nerves	105
Neuromodulation and Co-transmission	111
Concluding Comments	113
References	114
8 The Arterial Wall and the Haemostatic Process	
<i>Y. J. Legrand and L. O. Drouet</i>	127
Introduction	127
Thromboresistance of the Endothelium	128
Thromboresistance in Relation to Primary Haemostasis.....	128
Thromboresistance in Relation to Plasma Coagulation.....	129
Thromboresistance in Relation to Fibrinolysis	129
The Thrombogenicity of the Subendothelium	130
Ex Vivo Study of the Thrombogenicity of the Subendothelium.....	130
In Vitro Study of the Vascular Thrombogenic Macromolecules.....	132
Structural Determinants of Collagen and Microfibrils Involved in the Thrombogenicity of Subendothelium	132
In Vivo Studies on the Thrombogenicity of Subendothelium.....	135
Mechanism of Platelet Activation	135
Conclusion	138
References	138
9 The Vascular Wall and Hormonal Control of Vasomotor Function	
<i>F. Alhenc-Gelas and P. Corvol</i>	143
Vasoactive Peptide Metabolism of the Vascular Endothelium	144
Converting Enzyme or Kininase II	144
Does a Complete Renin-Angiotensin System Exist in the Vascular Endothelium?	149
Other Peptidases of the Vascular Endothelium.....	150
Modulation by the Endothelium of the Physiological and Pharmacological Activity of Vasoactive Compounds	150
Stimulation of Prostaglandin Formation by Vasoactive Agents in the Vascular Endothelium	151
Vasomotor Reactions Depending on the Vascular Endothelium	153
Physiological and Physiopathological Consequences of the Role of the Endothelium in Controlling Vasomotor Activity.....	153
Endocrine Function of the Smooth-Muscle Cell: The Renin-Secreting Cell.....	154
Morphology of Renin-Secreting Cells	154
Renin Structure and Renin Precursor Maturation	155
Role of Renin Secretion	156
Note Added in Proof	157
References	157

II PATHOPHYSIOLOGY OF EXPERIMENTAL AND HUMAN ATHEROSCLEROSIS

10 The Lesions of Atherosclerosis

<i>C. L. Berry</i>	163
Early Changes, Fatty Streaks and Gellatinous Elevations.....	163
The Fibroatheromatous Plaque and Early Established Lesion.....	164
The Complicated Lesion	164
The Pathogenesis of the Lesions	164
The Role of Lipids	165
References	166

11 Atherosclerosis: Cellular Aspects

<i>O. Kocher, I. Hüttner and G. Gabbiani</i>	167
Introduction	167
Role of Endothelium	167
Modifications of the Endothelium in Pathological Conditions.....	168
Endothelial Dysfunction as a Predisposing Factor for the Development of Atherosclerosis	171
Role of Smooth-Muscle Cells	172
The Arterial Smooth-Muscle Cell in Experimental Atherosclerosis.....	172
Arterial Smooth-Muscle Cells in Human Atherosclerosis	174
Growth Factors for Arterial Smooth-Muscle Cells	176
Monoclonality of Atheromatous Smooth-Muscle Cells	177
The Role of the Macrophage.....	177
Conclusions	178
References	179

12 Extracellular Matrix Changes in Atherosclerosis

<i>T. N. Wight</i>	185
Collagens	185
Proteoglycans	187
Elastin	190
Glycoproteins	191
Summary	192
References	192

13 Lipid Accumulation in the Vessel Wall

<i>S. Moore</i>	197
Introduction	197
Lesions Induced by Injury	198
Injury from Indwelling Aortic Catheter	198
Immunological Injury	198
Inhibition of Lesion Development	199
Balloon-Catheter Removal of the Endothelium	200
Lipid Accumulation in Lesions	200
Lipid-Containing Lesions Following Vascular Injury in Man	200
Relationship of Injury to "Early" Human Atherosclerotic Lesions.....	201
Mechanisms of Lipid Accumulation in Injury-Induced Lesions.....	202

Proteoglycans and Lipid Accumulation	202
Modification of Low-Density Lipoprotein	203
Qualitative Change in Proteoglycans and Lipoprotein Binding	203
Alterations of Lipoprotein and Vessel Wall Uptake.....	204
Summary	204
References	205
14 Role of Platelets in Atherosclerosis and its Complications	
<i>Y. J. Legrand and L. O. Drouet</i>	209
Introduction	209
Factors in Endothelial Injury	209
Metabolic Factors	209
Toxic Factors	210
Immunological Factors	210
Infectious and Viral Factors	210
Role of Mononuclear Cells	211
Role of Platelets in Atherosclerosis	211
A Few Data on PDGF and its Role.....	211
Progression of the Atherosclerotic Lesion	212
Involvement of Haemostatic Factors in the Complication of the Arterial Lesions.	213
Thrombosis	213
Thromboembolic Occlusion	214
Arterial Spasm	214
Conclusion	214
References	215
15 Mechanical Factors in the Pathogenesis, Localization and Evolution of Atherosclerotic Plaques	
<i>S. Glagov, C. K. Zarins, D. P. Giddens and D. N. Ku</i>	217
The Mechanical Forces	217
Blood Flow	217
Pressure and Wall Tension	218
Pulsatile Flow	219
The Physical State of the Plaque.....	219
Mechanical Stresses and the Distribution of Intimal Plaques.....	221
Methodological Problems	221
Fluid Dynamic Characteristics	222
Blood Pressure and Tensile Stress	226
Proposed Mechanisms for Plaque Initiation	227
Endothelial Disruption	227
Wall Shear Stress	228
Transport Through the Artery Wall	228
Mechanical Factors in Lesion Progression	229
Secondary Disruption	229
Artery Adaptation	230
Mechanical Factors in Plaque Complication	231
Direct Interventions on Plaques	232
References	234

16 Progression, Topographical Aspects and Regression of Atherosclerosis	
<i>H. Bouissou, M. T. Pieraggi and M. Julian</i>	241
Introduction	241
Natural History and Progression of Atherosclerosis	241
Progression	242
Complications	247
Specific Findings	248
Problems of Regression	250
References	252

III MANAGEMENT OF PATIENTS WITH ATHEROSCLEROSIS

17 A Pharmacological Approach to Degenerative Alterations of Arterial Walls	
<i>A. Simon, J. Levenson and M. Safar</i>	257
The Primary Effects of Drugs on Arteries	257
Role of Exaggerated Constriction of Arteries in Vascular Disease	257
Response of Arteries to Acute Pharmacological Interventions	258
Differences in the Response of Large and Small Arteries to Pharmacological Interventions	261
Arterial Consequences of the Physiological Counter-regulations Induced by Drugs	263
Long-term Effects of Drugs on Arteries	264
Secondary Effects of Drugs on the Function of Arteries	265
Conducting Function	265
Buffering Function	265
Baroreflex Function	266
References	267
18 The Arterial Wall: Relationships Between Haemodynamic and Structural Aspects in Man	
<i>M. Safar, A. Simon and J. Levenson</i>	269
Methods of Studying the Vascular System in Man	269
Linear Model of the Vascular System	270
Measuring the Diameter of Arteries of Large Calibre	272
Haemodynamic Consequences of Diseases of the Large Arterial Trunks	274
Reduction of Arterial Compliance	274
Increase in Systolic Pressure	275
Reversibility and Aggravation of Haemodynamic Disorders	275
Restructuring of the Vascular System in Permanent Essential Systolo-Diastolic Arterial Hypertension	275
Arguments in Favour of Structural Modifications in the Cardiovascular System of the Hypertensive Subject	276
Reversibility of Structural and Haemodynamic Alterations of the Cardiovascular System in Hypertensive Subjects	277
References	277
19 The Epidemiology of Atherosclerosis	
<i>J. L. Richard</i>	279
Atherosclerosis in Human Populations	279
Temporal Variations	282

The Search for Associations	282
Secular and Geographical Relationships	282
Group Comparisons	283
The Search for Causes	284

20 Risk Factors for Atherosclerosis: A Clinician's Pragmatic Appraisal

<i>L. Capron</i>	297
Ignorance and Concern	297
Genesis of Risk Factors	297
Definition and Nature of Risk Factors	298
Meaning of Risk Factors	298
Correlation and Causation	298
Arterial Diseases and Atherosclerosis	299
Triglycerides and Atherosclerosis	299
Possible Mechanisms of Action for Risk Factors	300
Development of Atherosclerotic Plaques	300
Complications of Atherosclerotic Plaques	301
Consequences of Arterial Obstructions due to Atherothrombosis	301
Other Unsolved Issues	302
Do Risk Factors Exert the Same Influence in all Populations?	302
Are Risk Factors Similar for all Arterial Localizations of Atherosclerosis.	302
Is Amending Risk Factors Controlling Atherosclerosis?	303
Hypercholesterolaemia: A Nearly Perfect Example of a Risk Factor	305
Agreement	305
Disagreement	306
Conclusion	306
References	307

21 Diagnostic Principles and Therapeutic Management of Patients with Atherosclerosis

Lower Limb Arteriopathies	
<i>J. N. Fiessinger</i>	311
Diagnosis	311
Clinical Diagnosis	311
Investigations	311
The Strategy of Investigation	314

Principles of Treatment	314
Treatment of Atherosclerosis	314
Treatment of Ischaemia	315
References	315
Arteriosclerotic Lesions of Carotid Arteries
