Preface	13
1. Introduction	15
1.1 Pictures in a Starry Sky	15
1.1.1 The Nonsetting Constellations	15
1.1.2 Constellations of the Autumn Sky	18
1.1.3 Constellations of the Winter Sky	20
1.1.4 Constellations of the Spring Sky	22
1.1.5 Constellations of the Summer Sky	25
1.2 "First Came Astronomy..."	27
1.3 In Search of a World System	29
1.3.1 Motion of the Planets	29
1.3.2 The First Models of the Universe	31
1.3.3 The First Heliocentric System	34
1.3.4 The Ptolemaic System	34
1.3.5 The Truth Established	38
1.4 Invention of the Telescope	40
1.5 More Accurate Definement of the Universe Scale	42
1.6 The Scientific View Triumphs	47
1.7 The Genesis of Astrophysics	50
2. The Elements of Classical Astronomy	52
2.1 Celestial Coordinates	52
2.1.1 Geometry of the Celestial Sphere	52
2.1.2 Celestial Coordinate Systems	55
2.2 Measuring Time	57
2.2.1 Sidereal and Solar Days	57
2.2.2 The Equation of Time	58
2.2.3 The Local Solar and Sidereal Time	59
2.2.4 Ephemeris Time	60
2.2.5 Atomic Time	61
2.2.6 The Date Line	61
2.2.7 The Julian Period	62
2.3 From Observation to Catalog	62
2.3.1 Measurement	62
2.3.2 Refraction	63
2.3.3 Diurnal and Annual Parallaxes	64
2.3.4 Precession and Nutation	67
2.3.5 Catalogs	68

2.4	Problems of Celestial Mechanics	69
2.4.1	Orbits of Planets and Comets	69
2.4.2	The Elements of Planetary Orbits	72
2.4.3	The Three-Body Problem	73
2.4.4	Roche Surfaces	75
2.4.5	The Roche Limit	77
2.5	Motion of the Moon. Eclipses	78
2.5.1	Apparent Motion of the Moon	78
2.5.2	Phases of the Moon	79
2.5.3	The Moon's Orbit	80
2.5.4	Eclipses	80
2.5.5	The Conditions for Eclipses	82
2.5.6	Eclipse Cycles	84
3.	The Basics of Astrophysics	86
3.1	Radiation Laws	86
3.1.1	Photons as a Source of Information	86
3.1.2	The Goals of Astrophysics	87
3.1.3	Elements of Astrophotometry	88
3.1.4	Blackbody Radiation	90
3.1.5	Comparison with Observations	92
3.2	Physics of a Radiating Gas	94
3.2.1	Excitation and Ionization Potentials of Atoms	94
3.2.2	Spectral Series	95
3.2.3	The Einstein Photoelectric Equation	96
3.2.4	The Time Scale of Relaxation Processes	98
3.2.5	Forbidden Lines	99
3.2.6	Boltzmann's Formula	100
3.2.7	Saha's Formula	101
3.2.8	The Maxwellian Distribution	101
3.2.9	The Doppler Effect	102
3.3	Radiation Transfer	103
3.3.1	Equation of Radiation Transfer	103
3.3.2	The Absorption Coefficient	108
3.3.3	The Balmer Discontinuity	109
3.4	The Profiles of Spectral Lines	110
3.4.1	Equivalent Line Widths	110
3.4.2	Radiation Transfer in a Line	111
3.4.3	Broadening of Spectral Lines	112
3.4.4	Curve of Growth	114
3.5	The Diversity of Stellar Spectra	115
3.5.1	The Material Unity of the World	115
3.5.2	Spectral Classification of Stars	117
3.5.3	The Physical Basis of the Spectral Classification	116
3.5.4	Rotation and Turbulence Effects	118

3.6	Nonthermal Radiation	119
3.6.1	Synchrotron Radiation	120
3.6.2	Compton Scattering of Electromagnetic Waves by Relativistic Electrons	121
3.6.3	Scattering of Plasma Waves by Relativistic Electrons	122
3.6.4	Transition Radiation	122
4.	The Instruments and Methods of Optical Astronomy	124
4.1	The Most Important Characteristics of Telescopes	124
4.1.1	The Potential of the Telescope	124
4.1.2	The Optics of Modern Telescopes	127
4.1.3	Types of Reflecting Telescopes	130
4.1.4	Mounting of Telescopes	133
4.1.5	Astroclimate	134
4.2	Telescopes of the 20th Century	135
4.2.1	Giant Reflecting Telescopes	135
4.2.2	Astrographs	140
4.2.3	Solar Telescopes	141
4.3	Detectors of Radiation	145
4.3.1	The Eye as Detector of Radiation	145
4.3.2	Photographic Emulsion	145
4.3.3	Photomultiplier (PM) Tube	147
4.3.4	Solid-State Photodetectors	148
4.3.5	Multianode Microchannel Matrix Detectors	149
4.4	Auxiliary Devices	150
4.4.1	Light Filters	150
4.4.2	Spectral Devices	150
4.4.3	Photometers	154
4.4.4	Image Tubes	156
4.4.5	Polarimeters	159
4.4.6	Instruments for Studying the Sun	160
4.4.7	Measuring Devices	162
4.5	Modern Astrophotometry	164
4.5.1	Photographic Photometry	164
4.5.2	The Color Index	165
4.5.3	Photographic Standards	166
4.5.4	Photoelectric Photometry	166
4.5.5	Bolometric Magnitude of a Star	168
5.	To See the Invisible	170
5.1	On the Crest of a Radio Wave	170
5.1.1	Antennas of Radio Telescopes	170
5.1.2	Reception and Amplification of Radio Signals	174
5.1.3	Interferometers in Radio Astronomy	175
5.1.4	Very-Long-Baseline Interferometry (VLBI)	178

5.2 Infrared Astronomy	179
5.2.1 Detection of Infrared Radiation	180
5.2.2 The Infrared Sky	182
5.3 From Ultraviolet Radiation to Gamma Rays	183
5.3.1 Ultraviolet Astronomy	184
5.3.2 X-ray Astronomy	186
5.3.3 Gamma-Ray Astronomy	188
5.4 Observations of Cosmic Rays	190
5.5 Catch the Neutrino!	192
5.5.1 Theoretical Prerequisites	192
5.5.2 Detection Methods	195
5.6 Gravitational-Wave Astronomy	199
6. The Solar System	204
6.1 Acquaintance with the Closest Star	204
6.1.1 General Information about the Sun	204
6.1.2 Granules, Spots, and Flares	206
6.1.3 Solar Flares	209
6.1.4 Chromospheric Faculas, Flocculi, and Prominences	209
6.1.5 The Radio and X-ray Sun	210
6.2 The Sun: A Ball of Gas	212
6.2.1 The Hydrostatic Equilibrium of the Sun	212
6.2.2 Dynamics of the Outer Layers of the Sun	215
6.3 The Driving Force of Solar Activity	218
6.3.1 The Magnetic Fields of Spots	218
6.3.2 The Theory of Solar Flares	220
6.3.3 Formation of Prominences	223
6.4 Sources of Solar Energy	223
6.4.1 Gravitational Compression	223
6.4.2 Nuclear Fusion	225
6.5 The Earth	227
6.5.1 Mysteries of the Earth's Depths	227
6.5.2 What the Earth's Crust Shows	229
6.5.3 The Earth's Hydrosphere and Atmosphere	232
6.5.4 The Earth's Satellite, the Moon	233
6.6 The Major Planets	238
6.6.1 Mercury	238
6.6.2 Venus	240
6.6.3 Mars	243
6.6.4 Jupiter	247
6.6.5 Saturn	250
6.6.6 Uranus	252
6.6.7 Neptune and Pluto	253
6.6.8 The Mass-Radius Diagram for Planets	253

6.7	Minor Members of the Solar System	254
6.7.1	Asteroids	254
6.7.2	Comets	256
6.7.3	Meteors, Meteoroids, and Meteorites	258
7.	The Physics of Stars	262
7.1	From Observations to Diagrams	262
7.1.1	Diversity in the World of Stars	262
7.1.2	The Hertzsprung-Russell Diagram	263
7.1.3	The Mass-Luminosity Diagram	265
7.1.4	Interrelation of Parameters of Stars	265
7.2	Inside a Star	266
7.2.1	Polytropic Models	266
7.2.2	The Condition of Radiative Equilibrium	268
7.2.3	Methods of Calculating Stellar Models	269
7.2.4	Models of White Dwarfs	272
7.2.5	Nucleosynthesis in Stellar Depths	273
7.3	Variable Stars	276
7.3.1	Eclipsing Variable Stars	277
7.3.2	Pulsating Variable Stars	278
7.3.3	Eruptive Variable Stars	282
7.4	Supernova Explosions	284
7.4.1	Light Curves of Supernovae	284
7.4.2	Sources of Energy of Supernova Explosions	286
7.4.3	Elements of Shock Wave Theory	288
7.4.4	Alternatives	292
7.5	Pulsars	292
7.5.1	The “Little Green Men” Signals	292
7.5.2	Neutron Stars	294
7.5.3	Pulsar Models	296
7.5.4	X-ray Pulsars and Bursters	298
7.6	Black Holes	302
7.6.1	The Gravitational Radius of an Object	302
7.6.2	Time Dilation	303
7.6.3	An Endless Expiring	303
7.6.4	Black Holes Evaporate	304
7.6.5	Where Should One Look for Black Holes?	305
8.	Our Galaxy	307
8.1	An Overview	307
8.1.1	To the Boundaries of the Milky Way	307
8.1.2	Star Clusters and Stellar Associations	309
8.1.3	Nebulas	311

8.2	Everything Is Moving	312
8.2.1	The Proper Motion of Stars	312
8.2.2	The Motion of the Sun	315
8.2.3	Rotation of Our Galaxy	316
8.3	Subdivisions of Our Galaxy	317
8.3.1	Populations and Subdivisions	317
8.3.2	The Mystery of the Corona and Nucleus of Our Galaxy	319
8.4	The Physics of Dust and Gas	321
8.4.1	Gas in Interstellar Space	321
8.4.2	Regions of Ionized Hydrogen	323
8.4.3	Interstellar Absorption of Light	325
8.5	The Magnetic Fields of Our Galaxy	327
8.5.1	Proof of Existence of a Magnetic Field	327
8.5.2	Synchrotron Radio Emission of Our Galaxy	329
8.5.3	The Origin of the Magnetic Field	329
8.6	The Riddle of the Owl and the Crab	330
8.6.1	Planetary Nebulas	330
8.6.2	The Crab Nebula	332
8.6.3	Other Supernova Remnants	334
8.7	The Dynamics of the Interstellar Medium	336
8.7.1	Shock Waves in the Interstellar Medium	336
8.7.2	Ionization Fronts	338
8.7.3	Turbulence	339
8.8	Cosmic Masers	340
9.	In the Expanses of the Universe	343
9.1	Diversity of Galaxies	343
9.1.1	Nebulas or Galaxies?	343
9.1.2	Distribution of Galaxies in Space	344
9.1.3	“Black Regions” in the Universe	345
9.1.4	Types of Galaxies	346
9.2	The Scale of the World of Galaxies	349
9.2.1	Distances to Galaxies	349
9.2.2	Rotation of Galaxies	350
9.2.3	Luminosities of Galaxies	350
9.2.4	The Mass of a Galaxy	351
9.2.5	The Population of Galaxies	352
9.3	The Recession of Galaxies	353
9.3.1	Redshift in the Spectra of Galaxies	353
9.3.2	Redshift as Indicator of Distance	355
9.4	Active Galaxies and Quasars	357
9.4.1	Extra-Galactic Radio Sources	357
9.4.2	Active Galaxies	357
9.4.3	Quasars	361
9.4.4	Alternatives	365
9.4.5	Quasars and N-galaxies	367

10. Everything under the Sun	368
10.1 Models of the Universe	368
10.1.1 Problems in Cosmology	368
10.1.2 The Scale Factor	369
10.1.3 The Critical Density	370
10.1.4 The Acceleration Parameter	371
10.1.5 Types of Cosmological Models	372
10.2 Difficulties of Choice	374
10.2.1 The Problem of Distances in Cosmology	374
10.2.2 Hubble's Diagram	376
10.2.3 Redshift vs. Angular Diameter of a Galaxy	377
10.2.4 Counting the Number of Radio Sources	378
10.2.5 The Problem of Critical Density and Cosmological Constant	380
10.2.6 The Age of an Oscillating Universe	381
10.3 The Model of a Hot Universe	381
10.3.1 Background Radiation	381
10.3.2 Expansion from a Singularity	384
10.3.3 Closer to the Beginning	385
10.3.4 Nucleosynthesis	387
10.3.5 The Consequences of the Anthropic Principle	389
10.4 The Mysteries of Galaxies and Quasars	390
10.4.1 The Criterion of Gravitational Instability	390
10.4.2 The Problem of Protogalaxies	391
10.4.3 The Spiral Structure of Galaxies	392
10.5 The Stages in the Life of a Star	394
10.5.1 The Gravitational-Contraction Stage	394
10.5.2 Leaving the Main Sequence	398
10.5.3 How Old Are Star Clusters?	401
10.6 How Did the Planetary Family Come into Being?	403
Conclusion	408
Selected Readings	409
Index	410
