Table of Contents

1	The Phenomenon of Chemiluminescence 1
1.1	The Nature of Chemiluminescence
1.1.1	The Concept
1.1.2	The Excitation
1.1.3	Emission and Quenching
1.1.4	The Photon Emitter
1.1.5	Quantum Yield 6
1.2	Chemiluminescent Reactions
1.2.1	Discovery of Luminescent Compounds
1.2.2	Luminol
1.2.3	A Wide Variety of Chemiluminescent Systems
1.2.4	Common Reaction Mechanisms
1.2.5	Electrochemiluminescence
1.3	Bioluminescence Mechanisms
1.3.1	Common Features
1.3.2	Firefly
1.3.3	Photobacteria
1.4	Analytical Applications
1.4.1	The Growth of Chemiluminescence Analysis
1.4.2	Introduction of Bioluminescence
2 2.1	Principles of Analytical Applications of Luminescence 19 Compounds Which Can Be Analyzed 19 Kinetic Considerations 20
2.2	Characteristics of the Light Emission 21
2.5	Assay Based on Products of a Draseding Basetion
2.4	Assay based on Products of a Preceding Reaction
3	Enzyme Kinetics 25
3.1	Particular Considerations of Enzyme Kinetics
3.1.1	Emission and Reaction Rate 25
3.1.2	The Michaelis-Menten Relation
313	Inhibition of the Enzyme Reaction 26
3.1.4	Enzyme Activities and Rate Constants
3.2	Selecting Analytical Parameter when Determining a Light-Inducing
	Compound
3.2.1	Measuring the Intensity Level or Integrating the Curve of the Emitted
	Light
3.2.2	Rate Requirements for Adequate Sample Handling
3.2.3	Representation of the Start-Up Phase

.

4	Coupling of Reactions							33
4.1	Principal Approach							33
4.2	Non-Cycling Coupled Reactions in Substrate Analysis							34
4.2.1	General Behavior							34
422	Defining a Rate-Determining Reaction	·	•	•	•	·	•	36
122	A palvesie Lising Initial Dates	•	•	•	•	•	•	38
4.2.5	Cualing Departians in Substrate Analysis	•	·	•	•	•	•	20
4.5	The Steedy State	•	•	•	·	·	•	20
4.3.1	Custing Time and A sufficientian	•	·	•	•	•	•	30
4.3.2	Cycling Time and Amplification	•	·	•	•	•	•	41
4.3.3	Comparing Constant Light Producing Methods	•	•	٠	•	•	·	42
4.4	Kinetics of Coupled Reactions in Enzyme Analysis .	•	•	·	·	•	•	43
4.4.1	General Application	·	•	•	•	•	·	43
4.4.2	Determination from Initial Slope	·	•	•	•	•	•	44
4.4.3	Determination From Steady-State	•	•	•	•	•	•	45
5	Experimental Design							47
<i>c</i> ' 1	Outesting American American Sustains							47
5.1	Selecting Appropriate Analytical Systems	•	•	•	•	•	•	47
5.2	The Firefly Luciferase System	•	•	•	•	•	•	4/
5.2.1	Data Pertaining to the Planning of Assays	•	•	•	•	•	·	4/
5.2.2	Time Profile of the Light Pulse	•	•	•	•	•	•	49
5.2.3	Nearly-Constant Light Emission	•	•	•	•	•	·	53
5.2.4	Assay of Phosphotransferases	•	•	•	•	•	•	53
5.2.5	Substrate Analysis	•	•	•	•	•	•	55
5.3	The Bacterial Luciferase System	•	•	•	•	•	•	56
5.3.1	The Two Enzymes			•		•	•	56
5.3.2	Emission Profiles of NADH and NADPH							58
5.3.3	Applying the Kinetics of Coupled Reactions							60
5.3.4	Substrate Analyses Through Direct Coupling							62
5.3.5	Assay of Enzymes with Direct Coupling				•		•	65
6	Preparation of Samples							69
61	Requirements							69
6.1	Requirements	•	·	•	•	•	•	60
0.2	A resting the Metabolic Processor	•	•	·	•	•	•	60
0.2.1	Arresting the Metadone Processes	•	•	•	•	•	•	70
0.2.2	Lyophinzation and Cryostat Techniques	•	•	•	•	•	•	72
6.2.3	Checking Alterations During Intermissions and Storage		•	·	•	-	·	72
6.2.4	Adjustment of Concentrations	·	•	•	·	•	•	13
6.3	Quantification of Samples	•	•	·	•	•	•	/4
6.4	Planning the Initial Preparative Steps	•	•	•	•	•	•	76
6.4.1	Sampling from Cell Suspensions, Cultures of Cells and S	Sm	all	Or	gan	IS	•	76
6.4.2	Sampling from Biopsies and Pieces of Organs	•	•	•	•	•	•	78
6.5	Extraction Methods	•	•	•	•	•	•	79
6.5.1	General Procedures						•	79
6.5.2	Adenine Nucleotides	•		-		•		80

6.5.3	Pyridine Nucleotides	• •	•	•	•	82
0.5.4		• •	•	•	·	83
6.3.3	Enzymes	• •	•	•	•	84
7	Generation and Measurement of Light Signals					87
7.1	Paths Towards Analytical Response		•	•	•	87
7.2	Desired Emission by Kinetic Means				•	88
7.2.1	Flash Techniques					88
7.2.2	Delayed Appearance of the Emission Maximum					88
7.2.3	Long-Lasting Emission					89
7.2.4	Stable Emission					89
7.3	The Light Measuring Procedure					91
7.3.1	Light Recording in Photometric Methods					91
7.3.2	Key Parameters Guiding the Design of Luminometers .					92
7.4	Instrumental Facilities for Appropriate Recording					93
7.4.1	Sample Compartment and Light Collection					93
7.4.2	Solid-State and Vacuum Cells					95
7.4.3	Quantum Efficiency and Sensitivity of the Light Detector					96
744	Amplification of Light Detector Signals		•	•	•	98
745	Commercial Instruments	• •	•	•	•	100
